MINISTRY OF WATER AND ENVIRONMENT  
DIRECTORATE OF WATER RESOURCES MANAGEMENT  
KYOGA WATER MANAGEMENT ZONE

# AWOJA CATCHMENT MANAGEMENT PLAN

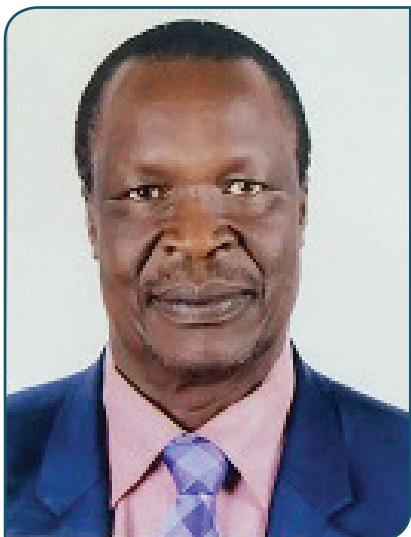

REVISED VERSION, 2020  
INCORPORATING ASPECTS OF CLIMATE CHANGE

## AWOJA CATCHMENT MANAGEMENT PLAN

# FOREWORD

*Hon. Sam Cheptoris*

Water resources support key sectors of the economy namely hydropower generation, agriculture, fisheries, domestic water supply, industry, navigation, etc. However, efficiency and sustainability of intervention under these sectors has recently been a concern in Uganda mainly due to inadequate sectoral collaboration in planning and implementation, increasing frequency of floods and droughts, environmental degradation and pollution of water resources. This situation therefore calls for development of mechanisms for promoting integrated planning, development and management of water resources so as to create synergy among various sectors, promote efficiency in utilization of available resources, reduce water and environment degradation and ensure more efficient utilization of water resources to meet various social and economic demand.

In 2011, my Ministry embarked on preparation of Catchment Management Plans (CMPs) as tools for ensuring equitable access to, and use of water resources, and safeguard of key natural resources for sustainable socio-economic development of the country.

A CMP provides a long-term strategy for sustainable development and utilization of water and related water resources. Catchment based water resources planning and management is in line with the integrated Water Resources Management (IWRM) paradigm, which ensures that land, water and related resources are developed and managed in a coordinated manner without compromising sustainability of vital ecosystems. As a lead agency for implementing Catchment based Water Resources Management (CbWRM) in Uganda, my Ministry through the Directorate of Water Resources Management is operationalizing the CbWRM framework through the four Water Management Zones of Albert, Kyoga, Upper Nile and Victoria WMZ.

In order to develop this CMP, a number of studies were undertaken which included an assessment of the existing catchment knowledge base, the current and projected water resources situation, the catchment's social and environmental assessment, and stakeholder engagement. The CMP identifies critical issues, challenges, opportunities, and threats within the catchment which need to be addressed to ensure the economic development of the people.

Guided by the key issues, challenges, threats, opportunities, key water resources planning principles and national strategies, the stakeholders developed a vision for the catchment. To achieve the vision, stakeholders came up with a number of strategic objectives, options and actions that need to be pursued in the short, medium and long-term up to the year 2040.

Awoja CMP was first developed in 2014 following the Uganda Catchment Planning Guidelines of 2014. In 2018, the Uganda Catchment Planning Guidelines were updated to include aspects of climate change. Using the updated guidelines, the Awoja CMP has been updated to include aspects of climate change.

My Ministry is therefore pleased to formally make this updated CMP available for use by various stakeholders. It will enormously help and guide all developers and users of water and related resources at the national and local levels. I therefore wish to call upon all the relevant government ministries and agencies at both national and local levels, the civil society, private sector, academia and research institutions, cultural institutions, religious institutions and the local communities to utilize this plan in order to optimally plan for the development and management of water and related resources for prosperity.

In line with the provisions of Section 5 of the Water Act Cap 152, I formally approve this Updated Catchment Management Plan for use by various stakeholders.

**For God and My Country.**

Hon. Sam Cheptoris

**Minister of Water and Environment  
The Republic of Uganda**

## ACKNOWLEDGEMENTS

*Alfred Okot Okidi*

I would like to thank the Directorate of Water Resources Management for spearheading the preparing of Catchment Management Plans in Uganda. This is a stakeholder driven process that is key in ensuring that water resources are effectively planned for and sustainably developed and managed so as to support the achievement of the country's vision 2040.

Special thanks go to all the stakeholders at the national, regional and local levels for their active participation and involvement in preparation of this plan. Special appreciation goes to Kyoga Water Management Zone for coordinating the plan preparation process and the Awoja Catchment Management Organization through the Awoja Catchment Management Committee for ensuring that the plan is stakeholders' driven and addresses the needs of the people in the catchment.

Finally, I wish to thank the World Bank for providing funds that enabled preparation of the Awoja CMP in 2014. I also wish to thank the Adaptation Fund, through Sahara and Sahel Observatory, for providing funds that facilitated updating of the CMP to incorporate climate change issues as well as printing and disseminating the plan to stakeholders.

  
Alfred Okot Okidi  
**PERMANENT SECRETARY**  
***Ministry of Water and Environment***

# EXECUTIVE SUMMARY

The Awoja catchment is one of the 11 catchments within the Kyoga Water Management Zone (KWMZ), situated in the eastern part of the zone abutting Mount Elgon. It covers an area of approximately 11,000 square kilometres, which is about 19% of the total area of the KWMZ. It borders Mount Elgon to the east and drains into the Lake Kyoga region in the west. The catchment cuts across 14 districts of Bulambuli, Kween, Kapchorwa, Sironko (wholly in the catchment), Amudat, Nakapiripirit, Bukedea, Katakwi, Napak, Soroti, Kumi, Ngora, Bukwo, and Serere (partially in the catchment). According to projections made based on the 2002 census, the population of people leaving in Awoja catchment in 2013 was estimated to be about 1.45 million.

The Catchment Management Plan (CMP) for Awoja Catchment is intended to provide a long-term strategy for the sustainable development and utilisation of the water resources in the Awoja Catchment basing on a clear understanding of the prevailing challenges, risks, threats, and opportunities. This catchment based water resources planning and management is in line with the Integrated Water Resources Management (IWRM) paradigm, which ensures that land, water, and related resources are developed in a coordinated manner to ensure sustainability. The implementation of Catchment Based Water Resources Management (CBWRM) in Uganda is by the Ministry of Water and Environment (MWE), through the Directorate of Water Resources Management (DWRM) in which the country has been divided into four Water Management Zones (WMZs: Upper Nile WMZ, Albert WMZ, Victoria WMZ, and Kyoga WMZ. The Awoja Catchment is located in Kyoga Water Management Zone (KWMZ).

In order to facilitate the planning process for CBWRM, MWE developed Catchment Management Planning Guidelines (MWE 2012) whose piloting, formed the basis for development of this CMP following the progressive steps stipulated therein including:

- Stakeholder identification, engagement and analysis,
- Water Resources Assessment (WRA),
- Strategic Social and Environmental Assessment (SSEA),
- Options and scenarios analysis,
- Catchment Management Plan (CMP) and Implementation Plan (IP).

At all stages through the process of development of the CMP, stakeholders were engaged to ensure thorough engagement and ownership of the plan, which would ultimately ease its implementation. Stakeholder identification was undertaken to determine all organisations and communities, which may be affected (positively or negatively) by the water resources management in the catchment and who may be able to contribute to the programme of work due to their expert knowledge and or experience in the project areas. The operational environment of the Kyoga WMZ team, in terms of stakeholders in the use, development and management of water resources in the catchment was evaluated, and key stakeholders identified and analysed. The stakeholders also participated in mapping as well as prioritization of issues within the catchment.

An assessment of the existing catchment knowledge base, the current and projected water resources situation, the catchment's social and environmental state, together with stakeholder engagement at various steps through the development of the CMP led to identification of critical issues, challenges, opportunities, and threats within the Awoja Catchment. Through this assessment, information regarding the catchment was generated.

Much of the Awoja Catchment lies at an altitude ranging from 940 to 1000 metres above sea level (masl), with the upland hilly areas rising to 1400m and the high mountains to over 3000m. Although just 2° north of the equator, the altitude results in the catchment having a relatively mild climate, with annual patterns dominated by rainfall rather than by radiation. Much of the catchment is well watered and can support rainfed agriculture, but there exists spatial variation in seasonality and seasonal droughts are a common feature. The main dry season for the Awoja catchment is from December to February. The mean annual rainfall is 1103mm, but this is not evenly spread. The western tip and southern part of the Awoja Catchment experiences an average annual rainfall of 1200 - 1500mm/year. The majority of the central and northern part of the catchment has an average annual rainfall of 1197mm with a 10 months period for which evaporation exceeds rainfall. In the higher parts of the Awoja Catchment around Mount Elgon, high rainfall of between 1,500–2,000mm/year can be expected. The north-eastern part of the Awoja Catchment in the Karamoja region, including Nakapiripirit, Napak, and Amudat experience erratic rainfall, averaging 745mm/year which is far from ideal for crop cultivation.

The Awoja Catchment has a network of rivers, lakes, and temporary wetlands all of which play an important role in the catchment. All the rivers typically flow from the east or north to the south-western part of the catchment, converging in Soroti district, where the catchment's outlet is situated. The three largest lakes are Lake Bisina, Lake Opeta and Lake Okolitorum. Lake Bisina and Lake Opeta and associated swamps together extend over an area of 1200 square kilometres, with an open water area of approximately 250 square kilometres with Lake Opeta having an open water area of 40 square kilometres. Wetland area within Awoja is 4,195 square kilometres, consisting of original wetlands (which form a larger part) and converted wetlands. These lakes also play a major role for the socio-economic activities like fishing, transport, water supply for domestic use and livestock of the surrounding communities.

The population of Awoja is almost entirely rural, with district populations between 82% and 99% depending on agriculture for their livelihoods. Livelihoods are, therefore, almost exclusively based on the natural resources of the catchment, with subsistence agriculture being the primary source of food and income. The majority of farming is small scale and rainfed, where productivity is low and vulnerability to climate variability (including floods and droughts) is high. While the districts within the cattle corridor (Napak, Nakapiripirit, Kumi, Katakwi, Ngora, Amudat, Bukedea, and the top part of Bulambuli) are highly dependent on livestock and hence also on stock-watering facilities, livestock also complements cultivation in the central and southern parts of the catchment. Capture fisheries and fish farming provide another important opportunity for livelihoods. Capture fishing is practiced to a greater extent than aquaculture/fish farming.

The south-eastern part of the region is densely populated with the slopes of Mount Elgon (parts of Kween, Kapchorwa, Bulambuli and Sironko) being overpopulated, the inhabitants benefiting from rich volcanic soils, but living on small plots of land, mainly as subsistence farmers. This pattern increases the risks of erosion, landslides and food shortages. In contrast to this, the cattle corridor is generally a sparsely populated area. This region includes Karamoja (Nakapiripirit, Napak and Amudat, which is inhabited by nomadic pastoralists and characterised by difficult environmental and economic conditions as well as a history of insecurity. By 2040, the population is expected to triple, reaching a total of 4,790,044 people. The current population is almost entirely rural (over 90%) with Soroti being the only district with a large urban town. There is no vision for the development of large urban growth nodes, although the population of towns may increase disproportionately as rural resources become more thinly stretched.

There exists potential for tourism in the mountains of the northeast, including the Mount Elgon National Park offering sightseeing and hiking opportunities. Lake Opeta and Lake Bisina already draw many bird watchers and were declared Ramsar (an international treaty that provides the framework for the national action and international cooperation for the conservation and wise use of wetlands and their resources)sites. Lake Bisina and Lake Opeta are Important Bird Areas (IBA) for shoebills, fox's weaver, papyrus gonoleks, white-winged warbler and others thus making them conservation areas of high significance. The lakes' system is also important as a refuge for fish species that have gone extinct in the main lakes like Lake Victoria and Lake Kyoga.

The key environmental distinctions within the Awoja Catchment include:

- (a) the high-rainfall mountain areas
- (b) lowland plains with sufficient rainfall to support rainfed agriculture
- (c) extensive wetlands and lakes, and
- (d) the dry northern cattle corridor occupied by pastoralists.

The total natural runoff for the Awoja Catchment is approximately 1,615MCM/yr (million cubic metres per year) and the net runoff, after deducting estimated evapotranspiration losses of 384MCM/yr in the wetlands, is estimated to be 1,232MCM/yr. The total potential groundwater available for the entire Awoja Catchment was estimated to be 236MCM/yr.

The Awoja Catchment has seen little development of its water resources with the main water use sectors being water for domestic use, livestock watering, rainfed agriculture, and aquaculture. Environmental flows were assumed to be 15% of the natural streamflows in the sub-catchment. This was chosen as an illustrative measure for the preservation of river health and biodiversity that only becomes critical with high development and this was computed to be 185MCM/yr. The 2013 water demand for domestic, livestock, rainfed agriculture, aquaculture, rural industry, and environmental water requirements expressed as a percentage of the total water demand in Awoja Catchment stood at 4.47%, 6.24%, 10.12%, 0.63%, 0.21%, and 78.34% respectively. Projections for 2040 indicate that, water demands for domestic use, aquaculture, and rural industry will increase to 19.22%, 1.43%, and 1.05% respectively while that of livestock, rainfed agriculture, and environmental flow requirements will drop to 4.97%, 11.02%, and 62.32% of the total water demand respectively. This is associated with the projected population increment and levels of social-economic development within the catchment.

Droughts, floods, landslides and mudslides are a particular concern to the people residing in the Awoja Catchment as they often lead to loss of human life, animals, and crops. Land degradation and deforestation play a large role in the onset of flood events and may also contribute to droughts as soils lose their capacity to store water for later release, either to streams or as evapotranspiration. Floods frequently occur in low-lying areas, in areas along river banks, close to wetlands and along lakes. Awoja's large wetland areas, some of the severely degraded riverbanks, the catchment topography and degraded soils all promote flooding. Unstable soils along the steep mountain slopes lead to landslides and mudslides. Droughts are a feature of the highly seasonal rainfall and the most drought-prone areas in the Awoja Catchment are within the cattle corridor, particularly in the Karamoja region in the north catchment. The capacity to cope with existing climate risks is poor.

The Awoja Catchment has protected areas, the largest being the Pian Upe Wildlife Reserve and the smaller Mount Elgon National Park being situated in Kapchorwa, Bulambuli, Kween, Bukwa, and Sironko districts and consisting of a range of vegetation zones including afromontane forest. Smaller community wildlife management areas and some forest reserves have also been set aside. However, due to the increasing population pressure protected areas are being encroached upon as land to settle on becomes scarce, especially in the northern part of the catchment.

This wealth of information generated from the assessments resulted in the identification and mapping of key catchment issues including high population density and growth rate, high poverty levels, livelihoods- subsistence agriculture with low productivity, limited access to basic services, natural disasters, land degradation, river and wetlands degradation, deforestation, lack of awareness on environmental management among others. Guided by these key issues, together with the challenges, threats, opportunities, principles for development, and national strategies, the stakeholders then developed a vision for their catchment:

"Sustainably manage and utilise the water resources and related sources of the Awoja Catchment by 2040."

To achieve this vision, the four strategic objectives were set:

- 1 Catchment Protection and Conservation: To protect and restore the catchment for sustainable delivery of goods and services

- 2 Development for Socio-Economic Growth: To develop water resources for socio-economic growth through meeting community needs for water, energy, and food security
- 3 Mitigation and Adaptation: To mitigate and adapt to the impacts of droughts, floods, and landslides
- 4 Social and Institutional Development: To optimise catchment resources through capacity building, awareness, policy enforcement and institutional coordination.

These four strategic objectives were further broken down into options (options being possible measures/interventions used to address issues and reverse those trends that undercut sustainable development), which are specific, suitable and tailored to the different areas in Awoja.

| No   | <b>1. Catchment Protection and Conservation</b>                       |
|------|---|
| 1.1  | Sustainable land and environmental management                         |
| 1.2  | Reforestation   |
| 1.3  | Lakes and wetlands management   |
| 1.4  | Buffer zone set-asides  |
| No   | <b>2. Development for Socio-Economic Growth</b>                       |
| 2.1  | Sanitation systems  |
| 2.2  | Refurbishment of infrastructure                                       |
| 2.3  | Piped water schemes (surface water)                                   |
| 2.4  | Groundwater development   |
| 2.5  | Rainwater harvesting (roof water tanks and roof catchments)           |
| 2.6  | Sand dams   |
| 2.7  | Dams (small stock watering dams, valley dams and tanks, large dams)   |
| 2.8  | Enhancement of irrigation   |
| 2.9  | Water use efficiency  |
| 2.10 | Small hydropower  |
| 2.11 | Alternative energy supply   |
| 2.12 | Aquaculture   |
| 2.13 | Socio-economic strengthening  |
| No   | <b>3. Mitigation and Adaptation (Floods, Droughts and Landslides)</b> |
| 3.1  | Flood management and preparedness for floods                          |
| 3.2  | Construction of infrastructure for flood control                      |
| 3.3  | Cattle keeping practices  |
| No   | <b>4. Social and Institutional Development</b>                        |
| 4.1  | Monitoring  |
| 4.2  | Extension services (information and training)                         |
| 4.3  | Awareness raising   |
| 4.4  | Institutional capacity building                                       |
| 4.5  | Legislation and enforcement   |

Following careful evaluation and screening of the potential options in line with the strategic objectives, three scenarios were developed through sets/combinations of options, weighted and ranked to get the best scenario. Among the three scenarios; Scenario 1 (SC1)-Mitigation of floods through riverbank protection (focusing on structural measures), SC2- Reliable water supply to the users, and SC3- Protect the environment through improved soil and water conservation. SC3 was ranked best for which implementation actions were detailed, an implementation and investment plan drawn with a 5-6 year timeframe which can be adjusted forward (since the options are many and funding requirements are high) after checking the adequacy of options. Thus, the CMP is a living document, which should be reviewed and updated periodically, advisably every five years to suit other administrative planning cycles.

# 1. INTRODUCTION

## 1.1 Background to Catchment Planning

The national water policy in Uganda is based on the Integrated Water Resource Management (IWRM) with implementation at the catchment level and provides an overall policy framework and defines the Government's policy objective as:

*"To manage and develop the water resources of Uganda in an integrated and sustainable manner, so as to secure and provide water of adequate quantity and quality for all social and economic needs of the present and future generations and with the full participation of all stakeholders."*

As part of the realisation of this objective, the National Water Policy was based on the implementation of objectives for water management within the IWRM framework. The IWRM in a river-basin context is defined as *"a process that enables the coordinated management of water, land and related resources within the limits of a basin so as to optimise and equitably share the resulting socio-economic well-being without compromising the long term health of vital ecosystems."*

A key feature of the implementation of IWRM in Uganda by the Ministry of Water and Environment (MWE) through the Directorate of Water Resources Management (DWRM) is to provide for the de-concentrated management of water resources to the local catchment level with the participation of all stakeholders.

Following the recommendations of the National Water Policy, the Water Sector Reform Study (2005), the JSR (2006) and other national and regional policies as well as steps already taken for implementation purposes, the country was delineated into four (4) Water Management Zones (WMZs) along hydrological boundaries. Thus, the northern parts of the country are covered by the Upper Nile Water Management Zone (UNWMZ), the western parts by the Albert Water Management Zone (AWMZ), the south by the Victoria Water Management Zone (VWMZ) and the east by the Kyoga Water Management Zone (KWMZ) as Figure 1-1 shows.

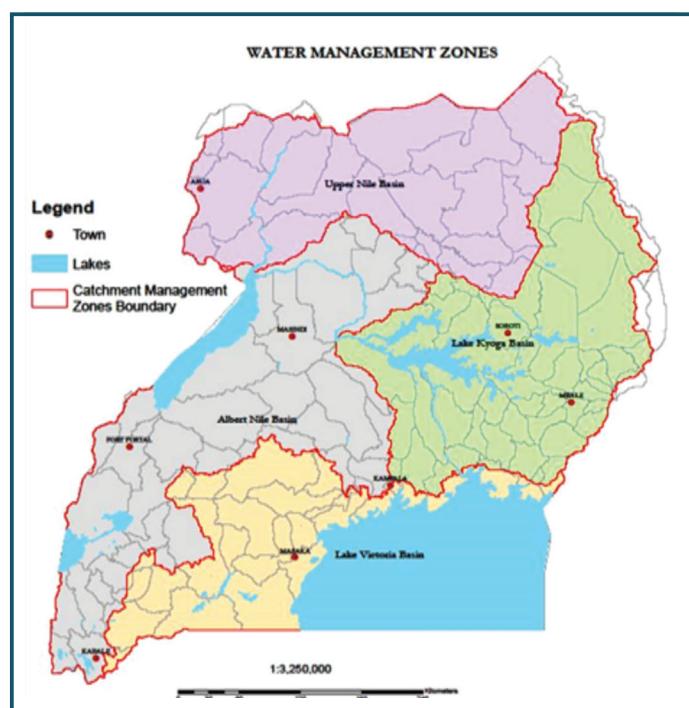

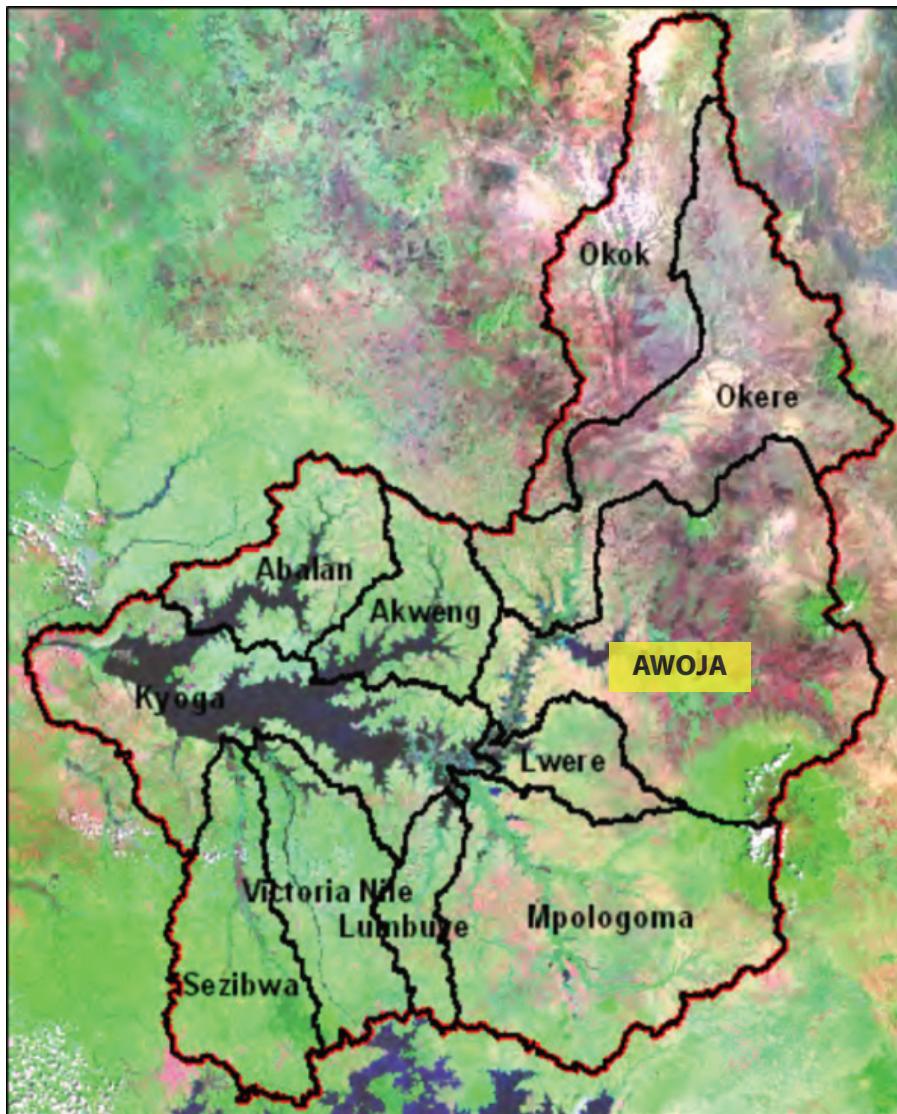

Figure 1-1: Water Management Zones in Uganda

Within each WMZ, there exists a number of smaller hydrological units called catchments for which tools and capacity for management of water resources have to be developed. Catchment Management Plans (CMPs) are to be developed for each catchment in the WMZs to enable planning of water resources development and management at a catchment level.

In line with this, the Awoja Catchment in Kyoga WMZ was chosen as a pilot following screening of potential catchments against a number of criteria which included water supply and sanitation, irrigation, livestock, farming,

fisheries and fish farming, wetlands management, tourism and recreation, natural disaster mitigation, and energy. Kyoga WMZ further benefited from the fact that there was an existing extensive and accessible knowledge base, including a functional Mike Basin simulation model and Geographic Information System (GIS) database. The Awoja Catchment is one of 11 catchments within the Kyoga WMZ *Figure 1-2*, and is situated in its eastern part abutting Mount Elgon. It extends over close to 11 000 square kilometres (km<sup>2</sup>), is mountainous to the east and drains into a lake region in the west.

*Figure 1-2: Catchments in Kyoga WMZ*

This document presents the Awoja CMP, which was prepared in close consultation with the stakeholders to ensure the sustainable use and protection of the water resources, and the conservation of the environment within Awoja Catchment. The CMP was developed through piloting the Catchment-based Water Resources Planning Guidelines, which were developed to guide the process.

## **1.2 Objectives and Purpose of the CMP**

The purpose of this CMP is to provide a long-term strategy for the sustainable development and utilisation of the water resources in the Awoja Catchment by the stakeholders in an integrated manner.

The CMP provides the basis for understanding a complex system and prioritising key focus areas for effective management taking into consideration potential development opportunities, problems and challenges, risks and threats. Following a participatory approach in developing the CMP, the objective is to provide information and shared motivation that will initiate interventions and/or investments, which can be implemented to realise

sustainable management and development of water resources within the Awoja Catchment. The CMP also purposes to:

- consider all conditions and characteristics (physical, social, economic, environmental, political, transboundary etc.) in the catchment in an integrated manner,
- raise awareness on the understanding and importance of as well as the responsibility for water resources management and environmental conservation among all stakeholders and how this will be of benefit to the sustainable economic growth and livelihoods in the catchment as a learning process,
- clarify the interdependence of all activities in the catchment and even the effects on neighbouring catchments,
- engage the stakeholders on all levels in the integrated planning process and help them decide on the best options and scenarios for the development of their catchment as well as in the development and implementation processes,
- motivate the stakeholders and put them into the position to play an active role in preserving their water resources and the environment, and
- initiate investment from within and outside Awoja.

### **1.3 Report Structure**

This document has six chapters that provide a logical and consistent flow of information throughout the document as highlighted here below:

**Chapter 1:** Introduction. This chapter presents the background to catchment management planning in Uganda, objectives of the CMP, and general layout of the report.

**Chapter 2:** Approach to Catchment Management Planning. This chapter describes the general approach to catchment management planning in Uganda, which is in line with the catchment management planning guidelines.

**Chapter 3:** Legislative and Institutional Framework. The existing policy, legal, and institutional arrangements, their linkages with catchment management planning and implementation, as well as the existing gaps are presented in this chapter.

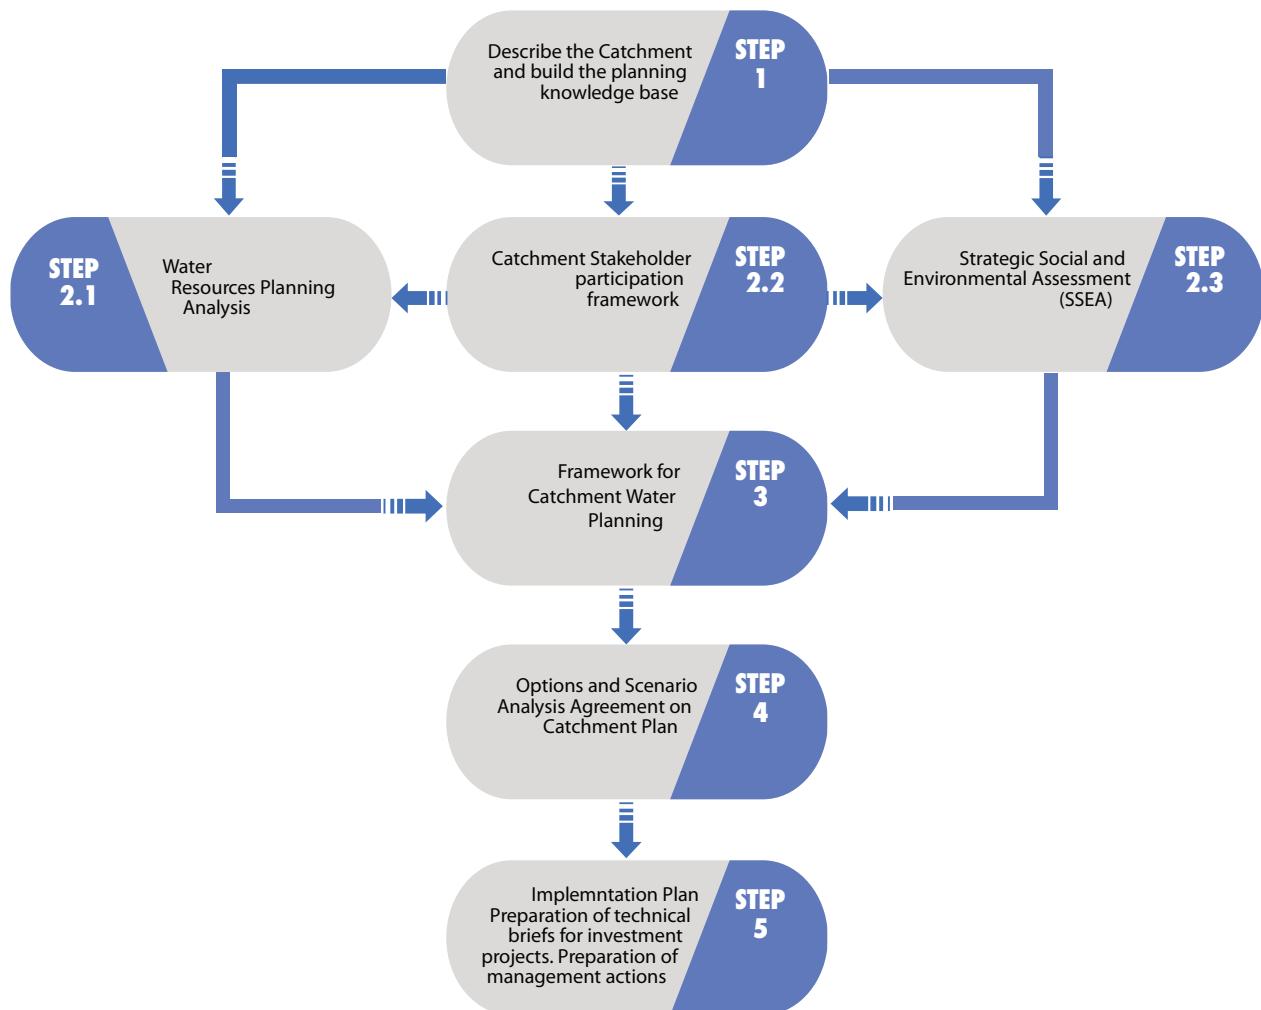

**Chapter 4:** Status of the Catchment. This chapter discusses the main characteristics and features of the catchment, which ultimately leads to identification of the major social, environmental, and water resources assessment issues together with the stakeholder engagement and issues' mapping.

**Chapter 5:** Vision, Objectives, and Analysis of Options. Catchment visioning and strategic analysis is presented and discussed in this chapter. The prioritisation of issues identified within the catchment, analysis of the options to manage the identified issues, as well as configuration of scenario and their evaluation.

**Chapter 6:** Management and Investment Actions. This chapter presents an agreed set of interventions resulting from the options for the best ranked scenario, the implementation plan, and costing of the agreed interventions.

## 2. APPROACH TO CATCHMENT MANAGEMENT PLANNING

The development of this CMP followed the guidelines for Uganda's Catchment-based Water Resources Planning (MWE, 2012). The process stipulated in these guidelines provides for various steps including assessments on water resources, stakeholders and social and environmental context as indicated in *Figure 2-1*. From these thematic assessments, major issues/challenges within the catchment, the available opportunities, potential threats and risks are identified, options for managing the identified issues proposed, forming the basis for strategic analysis in order to meet the catchment vision and objective. A set of agreed interventions are then mapped and an implementation plan laid, constituting of the associated timing and costs, to form the main body of a Catchment Management Plan and the Implementation Plan.

*Figure 2-1: The catchment management planning process*

The roadmap for the development of the Awoja CMP, therefore, sequentially included the following key activities:

- Evaluation of the existing catchment knowledge base

- Assessment of the current catchment and water resources situation
- Assessment of the catchment's social and environmental characteristics and needs
- Stakeholders engagement at various steps of the development of the CMP;
- Providing a system model, and analysing water availability and future water demands
- Building consensus regarding development and management challenges and opportunities, and developing principles for catchment management and development
- Defining a vision and strategic objectives
- Identifying key strategic actions to realise the vision and objectives
- Developing and analysing options and scenarios; and
- Providing a time-bound implementation plan (short, medium and long term) for the options towards improved water development and management in the catchment.

All these activities and processes as stipulated in the catchment planning guidelines 2012 were adhered to and thematic reports were generated, all of which fed into this CMP. The thematic reports developed in the process of undertaking these activities included:

The development of this CMP was solely based on the guidelines for Uganda's Catchment-based Water Resources Planning (MWE, 2014). The process stipulated in these guidelines provides for various steps including development of a knowledge base, water resources planning analysis, stakeholders' participation, and social and environmental context as indicated in *Figure 2-1*. From these thematic assessments, major issues/challenges within the catchment, the available opportunities, potential threats and risks are identified, options for managing the identified issues also identified, and this forms the basis for strategic analysis in order to meet the catchment vision and objective. A set of agreed interventions are then mapped and an implementation plan laid, constituting of the associated timing and costs, to form the main body of a Catchment Management Plan and the Implementation Plan.

The roadmap for the development of the Awoja CMP, therefore, sequentially included the following key processes, however, stakeholder consultation was done at almost all stages in the development process:

- **The Water Resources Assessment report**, which comprises of a basic assessment of the natural catchment characteristics, natural water resources, rainfall and runoff characteristics, hydro-meteorological monitoring, water quality, water demands and water infrastructure.
- **The Social and Environmental Issues report**, which comprises of the legal and policy context, institutional arrangements, environmental baseline and socio-economic characteristics of the Awoja Catchment that affect the social and environmental well-being of the catchment and highlights possible interventions to address the identified issues.
- **The Water Balance report**, which gives information on the water availability for surface water and groundwater. Use of the Mike Basin model (a water allocation tool) was made to determine current and future water demands and the availability of water resources for proposed development options.
- **The Stakeholder Engagement report** details the stakeholder participation framework and interactions in mobilising the input of water users and affected parties in the management of water resources. Field visits, informal and formal meetings as well as the proceedings of joint stakeholder forum workshops were highlighted and their input of water resources issues captured.
- **The Options for the Management and Development of Water Resources Report** details the identified catchment issues and provides an analysis of the options for solving them. It further presents and evaluates the formulated scenarios as well as costing them and as such, serves as the forerunner to the CMP.

All these thematic reports fed into the CMP, which consists of two main elements: first, a number of agreed investments in infrastructure and other interventions; and second, various water management interventions and actions aimed at resolving conflict, conserving and protecting the catchment and its natural resources, and ensuring equitable access to and use of water resources. The CMP further supports one of the highest priorities of the National Development Plan (NDP, 2010), which is to invest in water for production, including irrigated agriculture, water supply, livestock water supply, fisheries and aquaculture, and water for rural industry.

### **3. LEGISLATIVE AND INSTITUTIONAL FRAMEWORK**

#### **3.1 Policy and legal context**

The Africa Water Vision 2025 states its goal as “*an Africa where there is an equitable and sustainable use and management of water resources for poverty alleviation, socio-economic development, regional cooperation, and the environment*” and the water policy reform initiative is aimed at realising this vision for water management in Uganda within the IWRM framework. Worth noting is the fact that sustainable management of water resources is not limited to physical management but also incorporates legislation, policies, economic tools, institutions, and stakeholders involved in management, regulation, and utilisation of water resources. Whilst water is essential to livelihoods, and always provides for subsistence and survival, it does not solely drive economic development. Many other factors also have to be in place if the provision of water is to have its full beneficial impact on society. A strong cooperative approach between role-players and especially governmental institutions is, therefore, essential to work together within their respective legislative and policy mandates to promote the approach to IWRM and to ensure the best economic, social and environmental development.

A synopsis of the legal context in Uganda under which IWRM is implemented and managed is provided by:

- The Constitution of the Republic of Uganda
- National Policies
- National Legislation
- Trans-boundary considerations, and
- International Conventions

#### **3.2 The Constitution of the Republic of Uganda (1995)**

The Constitution of the Republic of Uganda sets a number of national guiding principles relating to, and supporting the principles of sustainable development including having balanced and equitable development, which requires that the State adopts an integrated and coordinated planning approach. It further stipulates that the State ensures balanced development between different areas of Uganda and between the rural and urban areas with special measures employed to favour of the development of the least developed areas.

Through the constitution, the State is entrusted to protect important natural resources including land, water, wetlands, minerals, oil, and fauna and flora on behalf of the people of Uganda. The state must further endeavour to fulfil the fundamental rights of all Ugandans to social justice and economic development, with all developmental efforts directed at ensuring the maximum social and cultural well-being of the people. In terms of the Constitution, all Ugandans have a right to education, health services, clean and safe water, work, decent shelter, adequate clothing, food security, and pension and retirement benefits.

The State must promote sustainable development and public awareness of the need to manage land, air, water resources, as well as use of natural resources, in a balanced and sustainable manner for the present and future generations. All possible measures must be taken to prevent or minimise damage to land, air, and water resources resulting from pollution or other causes. The Constitution entrusts the State to ensure the conservation of natural resources and promote the rational use of natural resources to safeguard and protect the biodiversity of Uganda.

Through all this, the Constitution sets the scene for Integrated Water Resource Management in Uganda.

### 3.3 National Policies

#### 3.3.1 National Water Policy (1999)

The 1999 National Water Policy provides an overall policy framework that defines the Government's policy objective as managing and developing water resources of Uganda in an integrated and sustainable manner, to secure and provide water of adequate quantity and quality for all social and economic needs sustainably, with the full participation of all stakeholders (DWRM, MWE, 2012).

According to the National Water Policy and the Water Act Cap 152, the responsibilities to provide water services and to maintain facilities were devolved to local councils in districts and urban centres. The role of the Central Government's Agencies is that of guiding and supporting as required. The Act thus emphasises the shared responsibilities in development and management of water resources among stakeholders, including the Private Sector and non-Government organisations (NGOs) to regulate human activities that can pose risks to water resources. It also provides for pollution control measures with associated penalties and fines.

The existing policy and legal framework promotes wise use of water resources from the lowest possible level, while considering roles to be played by different stakeholders at different levels. This offers an opportunity to ensure that communities can actively participate in the development and maintenance of water sources within a given catchment.

#### 3.3.2 National Policy for the Conservation and Management of Wetland Resources (1995)

The national policy for the conservation and management of wetland resources (1995) is aimed at restricting the continued loss of wetlands and their associated resources and aims to ensure that benefits derived from wetlands are sustainably and equitably distributed to all people of Uganda. The wetlands policy calls for:

- No drainage of wetlands unless more important environmental management requirements supersede
- Sustainable use to ensure that benefits of wetlands are maintained for the foreseeable future
- Environmentally sound management of wetlands to ensure that other aspects of the environment are not adversely affected
- Equitable distribution of wetland benefits; and
- The application of environmental impact assessment procedures on all activities to be carried out in a wetland to ensure that wetland development is well planned and managed.

Wetland related issues have been incorporated into the National Environmental Statute 1995. The Wetlands Policy is strengthened by a supplementary law specifically addressing wetland concerns. Wetland resources are regarded as forming an integral part of the environment and is recognised that present attitudes and perceptions of Ugandans regarding wetlands be changed. Wetland conservation requires a coordinated and cooperative approach involving all the concerned people and organisations in the country, including the local communities.

Within the context of the guiding principles, the National Wetlands Policy set five goals:

- To establish the principles by which wetland resources can be optimally used over time
- To end practices, which reduce wetland productivity
- To maintain the biological diversity of natural or semi-natural wetlands
- To maintain wetland functions and values; and
- To integrate wetland concerns into the planning and decision making of other sectors.

### **3.3.3 Uganda National Land Policy**

The Uganda National Land policy provides a framework for articulating the role of land in national development, land ownership, distribution, utilisation, alienability, management, and control of land. The Land Policy has a specific objective that seeks to ensure sustainable utilisation, protection and management of environmental, natural and cultural resources on land for national socio-economic development. It seeks to ensure that all land use practices and plans conform to principles of sound environmental management, including biodiversity, preservation, soil and water conservation, and sustainable land management. Section 6.7, item 140 of the policy promotes optimal and sustainable use and management of environment and natural resources for the present and future generations.

### **3.3.4 National Forestry Policy**

The National Forestry policy provides for the establishment, rehabilitation and conservation of watershed protection forests. It aims at promoting the rehabilitation and conservation of forests that protect the soil and water in Uganda's key watersheds and river systems.

### **3.3.5 The Renewable Energy Policy for Uganda**

The overall goal of the Renewable Energy policy is to increase the use of modern renewable energy, from the current 4% to 61% of the total energy consumption by the year 2017. Renewable sources of energy include solar energy, hydropower, biomass, wind, and geothermal as well as peat and wastes. For hydropower, the policy targets 1,200MW of installed capacity by 2017 for large hydropower plants and 85MW of installed capacity by 2017 for small and micro hydropower plants.

## **3.4 National legislation**

### **3.4.1 Water Act Cap 152 (1997)**

Uganda's Water Act Cap 152 provides for the use, protection and management of water resources and supply; and facilitates the devolution of water supply and sewerage undertakings. Its objectives are:

- i) To promote the rational management and use of the water resources of Uganda by:
  - Use of appropriate standards and techniques for the investigation, use, control, protection, management and administration of water resources
  - Coordinating all public and private activities which may influence the quality, quantity, distribution, use or management of water resources
  - Coordinating, allocating and delegating responsibilities for the investigation, use, control, protection, management or administration of water resources.
- ii) To promote the provision of a clean, safe and sufficient supply of water for domestic purposes
- iii) To ensure appropriate development and use of water resources other than for domestic use, e.g. watering of stock, irrigation and agriculture, industrial, commercial and mining uses, generation of energy, navigation, fishing, preservation of flora and fauna and recreation in ways which minimise damage to the environment; and
- iv) To control pollution and promote the safe storage, treatment, discharge and disposal of waste, which may pollute water or otherwise harm the environment and human health.

According to the National Water Policy (1999) and the Water Act Cap 152, the responsibilities to provide water services and to maintain facilities are devolved to local councils in districts and urban centres, with full mandates to construct, acquire or alter any water supply work. The role of the Central Government's Agencies is that of guiding and supporting as required. The Act thus emphasises the shared responsibilities in development and management of water resources among stakeholders (including the Private Sector and NGOs) to regulate human activities that can pose risks to water resources. It also provides for pollution control measures with associated penalties and fines.

Other Water Sector related policies form synergies with the Water Policy include:

- The National Gender Policy of 1999, which recognises women and children as the key stakeholders of water
- The Local Government Act of 1997, which underscores the role of Local Government in provision and management of water and sanitation, empowering the local authorities to plan and to implement development interventions according to local needs
- The 1998 Land Act, which stipulates the responsibility of the Central and Local Government in protecting environmentally sensitive areas such as natural lakes, rivers, groundwater, natural ponds, natural streams, wetlands, forest reserves, national parks and any other land reserved for ecological and tourist purposes; and
- The 1998 Water Abstraction and Wastewater Discharge Regulations for controlling water abstraction and wastewater discharge, to promote sustainable and environmentally friendly development and use of water resources. Some issues feature at the level of the policy and regulatory framework while others are crucial at catchment level. For instance, plans to develop irrigation schemes necessitate the development of a proper mechanism to protect water use rights and to settle disputes, especially between upstream and downstream water users. Issues of equity exist, whereby some users, often powerful up-stream users, put their interests first. In establishing the mechanism to handle user rights and conflict resolution, issues of active participation of all concerned stakeholders, including women, livestock keepers, and youths, should be taken into consideration.

The existing policy and legal framework promotes wise use of water resources from the lowest possible level, while considering roles to be played by different stakeholders at different levels. This offers an opportunity to ensure communities actively participate in development and maintenance of water sources.

### **3.4.2 National Environment Act (1995)**

The National Environmental Act provides for “*sustainable management of the environment; to establish an authority as a coordinating, monitoring, and supervisory body for that purpose; and for other matters incidental to or connected with the foregoing.*”

The Act makes provision for a tiered approach to environmental planning, commencing with a National Environmental Management Plan to be prepared and reviewed every five years. Each district is required to compile a district environmental action plan every three years that complements the National Environmental Management Plan. Both of these plans are made available to the public. At a project scale, the Act stipulates that developments of a certain nature (as determined under Section 19(7) of the Act) are required to undertake detailed Environmental Impact Assessment process in a prescribed manner.

The Act also makes provision for the monitoring of air and water quality and makes provision for the establishment and implementation of minimum standards pertaining to emissions and effluent.

Section 34 of the Act deals specifically with limitations in the use of rivers and lake systems and aims to minimise the negative impacts and control activities that have the potential to be detrimental to these systems. The Act goes on to make specific provisions for the protection of river banks and lake shores in Section 35 and protection and management of wetland systems in Section 36 and 37 respectively.

Hilly and mountainous areas have also been identified as areas requiring special attention and protection by the Act. The Act makes provision for the restoration of vegetative cover in these areas. This Act coupled with the provisions made in the Prohibition of the Burning of Grass Act (1974) and the Forest Act (1947) and the Cattle Grazing Act (1945) provides a good basis for restoration, protection and management of vegetative cover in hilly and mountainous areas.

### **3.5 Transboundary considerations**

The trans-boundary nature of Uganda's water resources are such that there are a number of international conventions relating to management of water resources with which Uganda must comply. Currently, the key conventions/organisations to which Uganda is party are; the Protocol for Sustainable Development of Lake Victoria Basin and Nile Basin Initiative.

#### ***3.5.1 Legal Framework for the Sustainable Management of the Nile Waters:***

Treaties regarding the management of the waters of the Nile basin date back to 1929 when Great Britain and Egypt signed an agreement under which no irrigation, power works or other measures were to be constructed or undertaken on the Nile, and its branches, or on lakes from which it flows in the Sudan, or in countries under British administration except with the previous agreement of the Egyptian government. The Agreement was followed by the 1959 Agreement on the Full Utilisation of the Nile Waters, which was signed between Egypt and Sudan. The 1959 Agreement allocates the waters of the Nile between the two signatory states.

#### ***3.5.2 Agreed Curve for the Lake Victoria Release:***

Before the construction of the Nalubale (Owen Falls) Dam, which began in 1951, the outflows from Lake Victoria were controlled naturally by the Ripon Falls some 3km upstream of the dam site. After study of the discharge measurements, which had been made since 1923 at Namasagali, about 80km downstream of the lake outfall, an Agreed Curve was established, which described the natural relation between lake levels measured at the Jinja gauge and simultaneous measured outflows from the lake. Since 1954 (when the Nalubale Dam was completed), water flow from the lake has been constrained to mimic the natural outflows from the lake using a rating "Agreed Curve" that correlates the flow of the Nile at the source with Lake Victoria water level.

#### ***3.5.3 Nile Basin Cooperative Framework Agreement***

The Nile Basin countries embarked on the process of negotiating and developing a new agreement for the sustainable management and development of the shared Nile water resources in the 1990s. This process is still on-going and it is envisaged that once these negotiations are successfully concluded, the resulting agreement will supersede all the existing Nile water agreements. (NELSAP, 2012)

#### ***3.5.4 The Lake Victoria Basin Commission***

The Lake Victoria Basin Commission which was established under article 33 of the "Protocol for Sustainable Development of Lake Victoria Basin" has a broad function of promoting, facilitating and coordinating activities of different actors towards sustainable development and poverty eradication of the Lake Victoria Basin. These activities include catchment management interventions among others.

### **3.6 International Conventions**

#### ***3.6.1 Ramsar Convention (1971)***

The Convention on Wetlands (Ramsar, Iran, 1971) is an intergovernmental treaty that commits member countries to maintain the ecological character of Wetlands of International Importance and to plan for the "wise use", or sustainable use, of all of the wetlands in their territories. The Convention's mission is "the conservation and wise use of all wetlands through local and national actions and international cooperation, as a contribution towards achieving sustainable development throughout the world." The wise use of wetlands is defined as "the maintenance of their ecological character, achieved through the implementation of ecosystem approaches, within the context of sustainable development." Uganda signed the Convention on the 4th July 1988. It currently has 12 Ramsar registered wetland systems, representing a combined area of 454,303ha.

#### ***3.6.2 UN Framework Convention on Climate Change (UNFCCC) and related Kyoto Protocol***

Uganda ratified the UNFCCC in 1993 and is one of the Least Developed Countries (LDCs). The First National Communication to the UNFCCC was developed in 2002. A Climate Change Policy was launched in 2012, with a related prioritisation of outputs under a short (1-5 years), medium (6 to 10 years) and long-term (10-15 years) timeframes. The priorities in the National Climate Change Policy have been integrated in the Second National

### **3.6.3 UN Convention on Biological Diversity**

The Convention's main objective is to ensure the conservation of biological diversity and sustainable use of its components. The study process should undertake thorough investigation of the sites and come up with lists of biodiversity in the areas and available information indicate that none of the groups are threatened, rare or vulnerable, hence no impact of the project on such groups.

### **3.6.4 International conventions for shared water resources**

There are a number of international conventions relating to management of shared water resources with which Uganda must comply. Currently, the key conventions/organisations to which Uganda is party are; the Protocol for Sustainable Development of Lake Victoria Basin and Nile Basin Initiative referred to in section 3.5.3 above.

## **3.7 The institutional context**

### **3.7.1 National Level**

The Ministry of Water and Environment (MWE) plans and coordinates all water and environmental sector activities and is the ultimate authority responsible for water resources and environmental management in Uganda. The MWE has the overall responsibility for setting national policies and standards related to water and the environment, managing and regulating all water resources and determining priorities for water development and management. The MWE is divided into three directorates: Directorate of Water Resource Management (DWRM), the Directorate of Water Development (DWD), and the Directorate of Environmental Affairs (DEA).

The DWD has the responsibility for providing overall technical oversight for the planning, implementation, and supervision of the delivery of urban and rural water and sanitation services across the country including water for production. It is responsible for regulating the provision of water supply and sanitation and the provision of capacity development and other support services to Local Governments, Private Operators and other service providers. The Directorate comprises of three Departments: Rural Water Supply and Sanitation, Urban Water Supply and Sanitation, and Water for Production.

The DEA is responsible for environmental policy, regulation, coordination, inspection, supervision and monitoring of the environment and natural resources as well as the restoration of degraded ecosystems and mitigating and adapting to climate change. The DEA comprises of four departments of Environmental Support Services (DESS), Forestry Sector Support Department (FSSD), Wetlands Management (WMD), and the Department of Meteorology (DOM), recently turned into an Authority.

The MWE further works closely with the National Environment Management Authority (NEMA), which is mandated with the coordination, monitoring, regulation, and supervision of environmental management; the National Water and Sewerage Corporation (NWSC) — with the mandate to operate and provide water and sewerage services in the larger urban centers; and the National Forest Authority (NFA), whose mandate is to manage Central Forest Reserves and to supply high quality forestry-related products and services.

Other national entities significantly impacted by technical water management issues are the Ministry of Agriculture, Animal Industry and Fisheries (MAAIF); the Ministry of Tourism and Industry (MTI); and the Ministry of Energy and Mineral Development (MEMD). The Ministry of Education and Sports (MES) is responsible for the implementation of Water and Sanitation in schools, and the Ministry of Health (MOH) is responsible for sanitation via the environmental health department.

The Ministry of Local Government (MLG) oversees the implementation of Local Government Development Plans, which include water supply and programmes for the improvement of hygiene and sanitation in institutions and public places. There are a number of development partners, private sector, and NGOs that also act in the water sector providing services, advice, and facilitation. A number of NGOs active in the water sector are coordinated at the national level through the Uganda Water and Sanitation NGO Network (UWASNET), an umbrella organisation largely funded by development partners and the MWE. An outline of organisations directly or indirectly involved in water management is indicated in *Figure 3-3*.

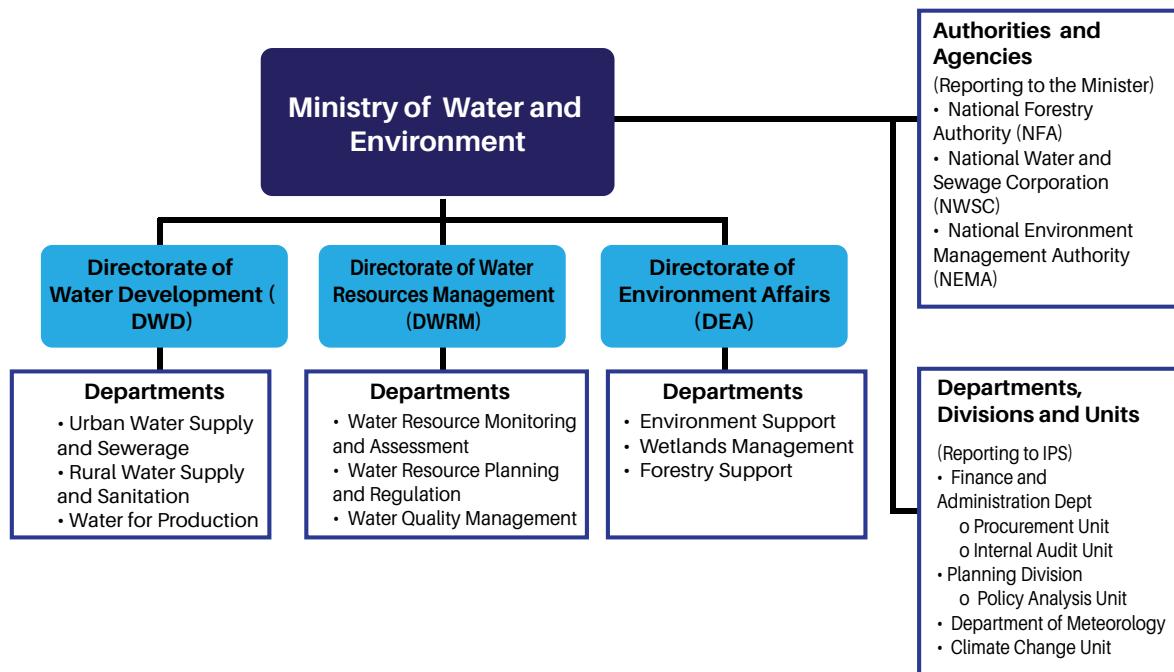

Figure 3-1: Institutional Setup at a National Level (MWE, 2009)

Coordination is a key process for Integrated Water Resources Management (IWRM), which involves multiple stakeholders from different sectors, on different scales, and with different structures and interests. At the national level, the following committees are relevant to integrated water resources management:

- The Policy Committee on Environment: chaired by the Prime Minister, at the highest level of political decision-making
- The Water Policy Committee, which is composed of directors, and enables high-level and strategic dialogue specifically in the water sector
- The IWRM Working group, which is an informal working group enabling technicians to coordinate
- The Water and Environment Sector Working Group (WESWG)
- The Inter-Ministerial Technical Committee regarding Water for Production, comprising members from the MWE, Ministry of Agriculture, Animal Industry and Fisheries (MAAIF), Office of the Prime Minister, National Planning Authority, and Ministry of Finance. It meets on a quarterly basis to coordinate investments and works regarding water for production
- The Wetlands Advisory Group (WAG), which is a technical group dedicated to wetlands. The WAG improves coordination on wetlands issues, particularly on the issue of dry land rice
- The MWE-DWRM has created Water Net, a network for building capacities of stakeholders connected to the water sector.

The National Environment Management Authority (NEMA) is the apex body for environmental law enforcement in Uganda. However, several functions have been delegated to other institutions as lead agencies in their respective fields. NEMA is in charge of:

- Review and administrative clearance of environmental evaluations, in conjunction with other lead agencies
- Delivery of permits (for instance, permits for activities within the legal buffer zones of water bodies). The responsibility of delivering permits is vested into the different lead institutions

- Monitoring compliance. The responsibility of control is distributed over 375 gazetted inspectors (2014) distributed in many Ugandan institutions (including the MWE). Only 30 of them belong to NEMA.

An Environmental Police has been formed at NEMA, comprising 25 officers. Only five regional Environmental Police officers (liaison officers) have been designated, among which one is based in Mbale (for the eastern region: his area covers 52 districts corresponding to a quarter of the country) and one in Jinja (for the south-eastern region). The liaison officers belong to the regular police but are specifically trained in environmental issues. They are under the command of the territorial police (Regional Police Commander/District Police Commander). Their functions include sensitisation, demarcation, control, issuing warnings, following up of cases, eviction, and prosecution.

Within each district, there are offices that are in charge of the environment, forestry, wetlands, agriculture, fisheries, planning among others. However, the structure varies from district to district.

### **3.7.2 Regional Level**

As a result of the deconcentration of the management of water resources, DWRM created four Water Management Zones (WMZ) following hydrological boundaries. They operate on regional level with the objective to bring the central services closer to the stakeholders. Their primary role is to facilitate sustainable development of the water resources for the economic and social benefit of the people in the catchment and to implement the water management measures needed to protect and conserve the catchment and its water resources, ensure sustainability, and reduce or resolve conflicts over resource use.

The DWD established the Water and Sanitation Development Facility (WSDF) as a mechanism for supporting water supply and sanitation facilities for rural growth centres and small towns, intended to promote a demand-responsive approach where Water Authorities/Town Councils or Town Boards apply for funding. The successful applicant is assisted by the WSDF to develop piped water supply systems.

Technical Support Units (TSU) established by DWD at the regional level have the mandate to support capacity building of district-based structures. This involves training, technical advice and support supervision of districts to enable them to effectively implement their roles in the rural sub-sector. The mandate also covers water for production.

Umbrella Organizations (UO) are also regional organisations constituted as associations of the local Water Supply and Sanitation Boards (WSSBs) with the principle objective of providing operation and maintenance (O&M) back-up support (training, technical, legal and organisational support, supervision of rehabilitation, and extension works as well as water quality monitoring).

The DWD has further deployed staff from its Department of Water for Production to the regions while DEA has also established offices for its Wetlands Department on regional level.

These deconcentrated units in the regions are based together for improved cooperation and integration and represent the MWE on regional level.

### **3.7.3 Catchment Level**

During the catchment management planning process, an institutional framework has to be created, which brings the stakeholders together to present and exchange their views and thus give the process legitimacy. Hence, the WMZ establishes Catchment Management Organisations (CMOs), which builds on and utilises to the maximum practicable extent, existing structures and relationships. The CMOs consists of several bodies *Figure 3-2*:

- The **Catchment Stakeholder Forum (CSF)** brings together all actors on catchment management. The CSF defines key issues related to water resources in the catchment that require consideration in order to effectively protect, manage, and develop water resources. It provides input to the CMP for coordinated, integrated and sustainable development and management of water and related resources in the catchment, including their implementation status
- The **Catchment Management Committee (CMC)** is composed of representatives of all relevant stakeholder groups (government, politicians, and community based organisations, NGOs, water

users, media, academic institutions, and private sector) and collaborates with the WMZ during the formulation of a Catchment Management Plan and plays a steering role during its implementation. The CMC responsibilities include: coordination of stakeholder-driven definition of key issues related to water resources, promotion of coordinated planning, and implementation as well as stakeholder-driven decision making related to integrated and sustainable development and management of water and related resources, development of plans for coordinated, integrated and sustainable development and management of water and related resources. It endorses the CMP and presents it to the Catchment Stakeholder Forum for information purposes. The CMC acts as an Executive Board for the Catchment Management Organisation.

- The **Catchment Management Secretariat (CMS)** provides support to the Catchment Management Committee in coordinating the planning and implementation of activities in the catchment as well as following up of recommended actions by the stakeholders. The CMS acts as an administrative secretariat for the Catchment Management Committee as well as the Catchment Technical Committee.
- The **Catchment Technical Committee (CTC)** forms the technical arm of the CMO and supports the CMC in their tasks. The CTC brings technical expertise and knowledge during the formulation of the Catchment Management Plan, operationalises and sometimes implements programmes and projects from the plan, and generally ensures that the different districts collaborate to implement the plan. It comprises of technical people from government, NGOs, private sector, development agencies, and other relevant organisations in the catchment.

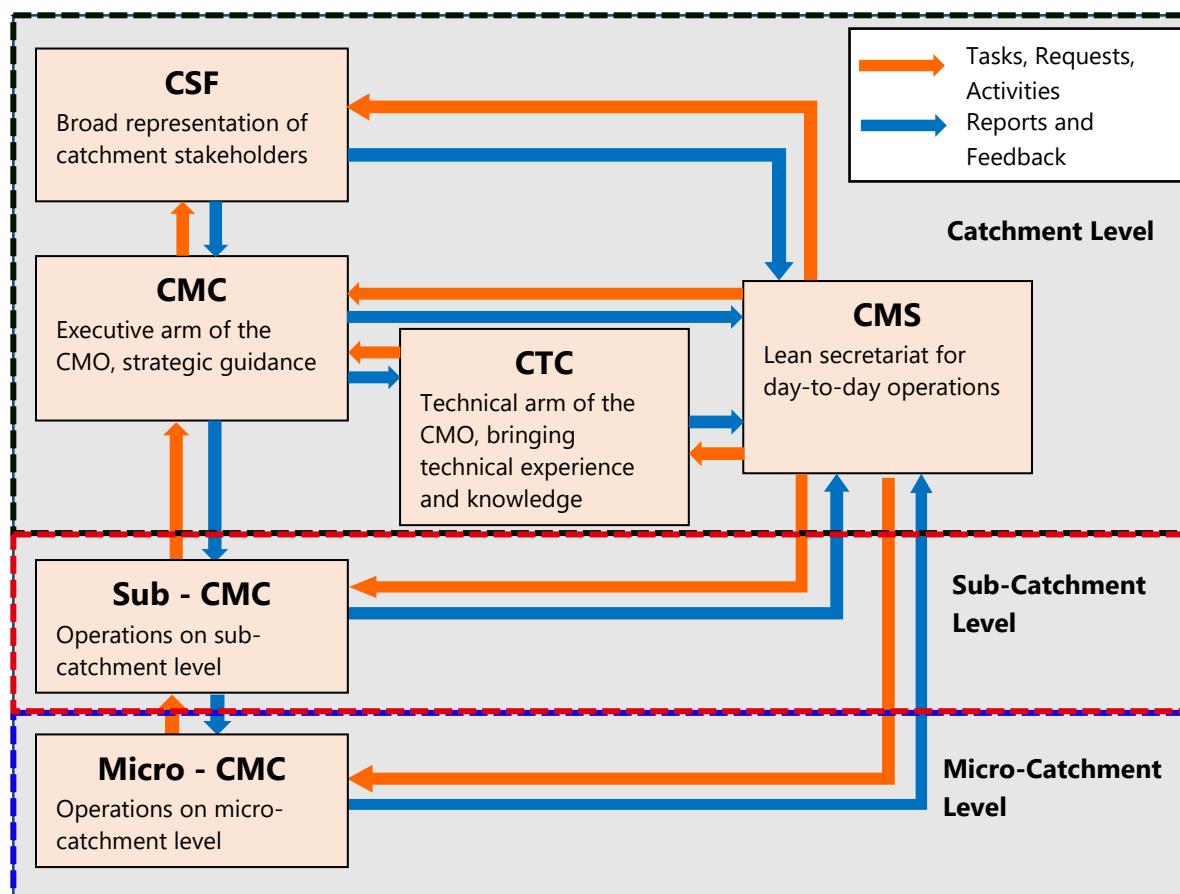

Figure 3-2: Catchment Management Organisation Structure (DWRM, 2016)

Other relevant institutions on the catchment level are:

- At the **District level**, the District Natural Resources Department (including the District Environment Office, District Forestry Office, and District Wetlands Office), District Works or Engineering Department under which the District Water Office falls, District Production Department with the District Agricultural Office, District Veterinary Office and District Fisheries Office, District Planning Department, Department of Community Based Services, District Information Department, and District Health Department are key in the implementation of the CMP. However, the structure varies from district to district according to the natural conditions in the district
- Policies at national level are translated into Sector Development Plans, which are implemented at district level under the Decentralization Policy. Most districts have 5-year district development plans in which all sector plans are integrated. Natural Resources Management activities are mandated to be implemented by every district
- Sub-counties
- CBOs and CSOs,
- Water User Associations etc.

Additionally, there are a number of private sector and NGOs, which also act in the water sector, providing services, advice and facilitation. They work on catchment and regional level or sometimes combine the two.

Many of these NGOs are coordinated at the national level through the Uganda Water and Sanitation NGO Network (UWASNET), an umbrella organisation largely funded by development partners and the MWE.

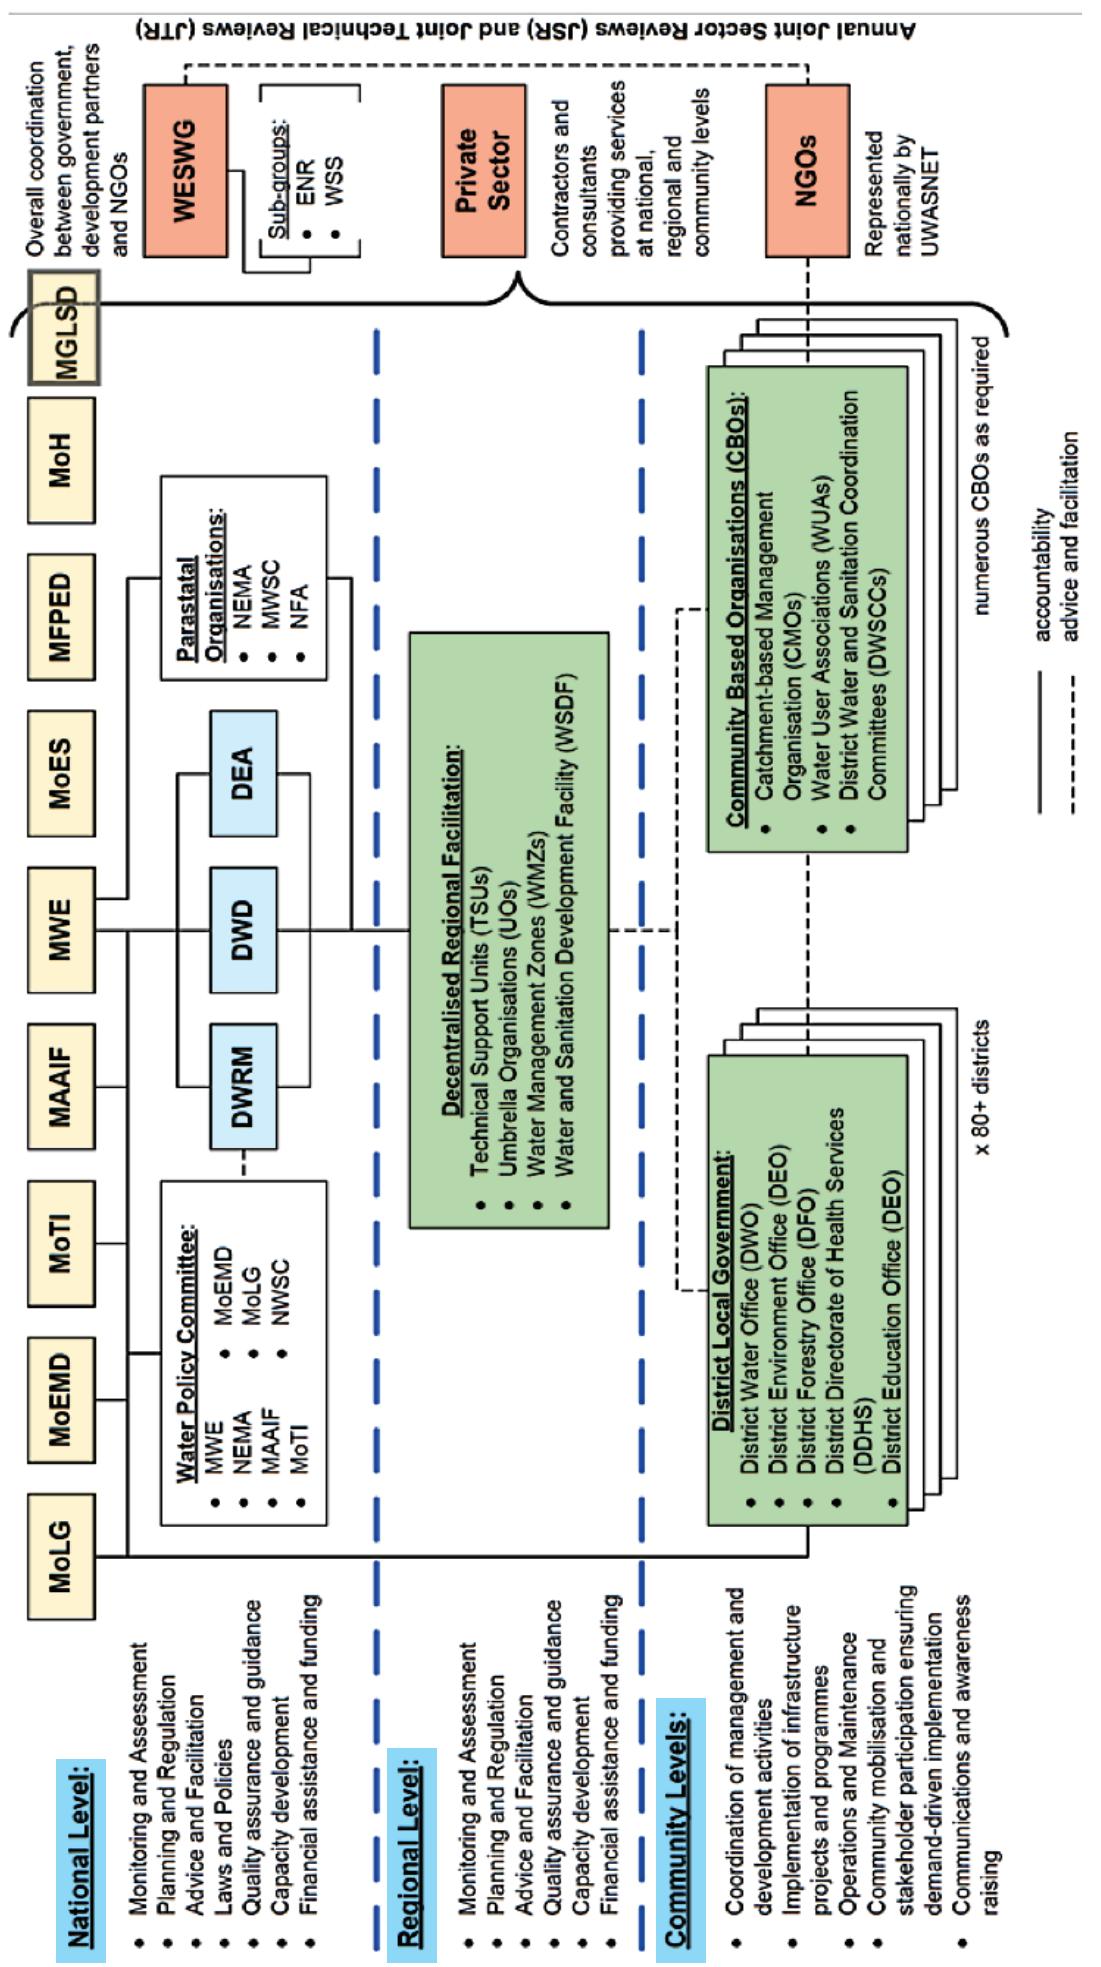

Figure 3-3: An Overview of Uganda's Water and Environment Sector (MWE, 2009)

### 3.7.4 Institutional Issues

Water resources management in Uganda continues to face some institutional challenges, mainly related with technical capacity, coordination, and enforcement of rules. *Table 3-1* highlights some of these challenges.

*Table 3-1: Institutional issues and implications*

| Issues  | Background and Implications   |
|---|---|
| Technical Capacity in local authorities                 | Limited capacity in institutions on local level with limited knowledge base.  |
| This has an impact on development and service delivery. |   |
| Coordination and cooperation between institutions       | Development initiatives by respective institutions are planned independently. Lack of coordination leads to inefficient use of water resources and lack of resource protection.   |
| New institutional framework in water management         | CMOs are being established. More direct interaction on local level with institutions will create more awareness and integration. Required capacities are being transferred to the zones.  |
| Water user participation                                | Formal stakeholder forums are not established yet. Some water sector committees such as water and sanitation advocacy committees need to be expanded. Water sector user groups lack capacity and information on good management practices.        |
| Law enforcement   | Limited capacity and political will to enforce legislation leads to degradation of natural resources.   |
| Development of Catchment Management Plans               | It is vital that CMPs are implemented to achieve sustainability. All parties need to reach agreement on actual accountability, actual monitoring and actual enforcement as it is here where success or failure of initiatives will be determined. |

## 4. STATUS OF THE CATCHMENT

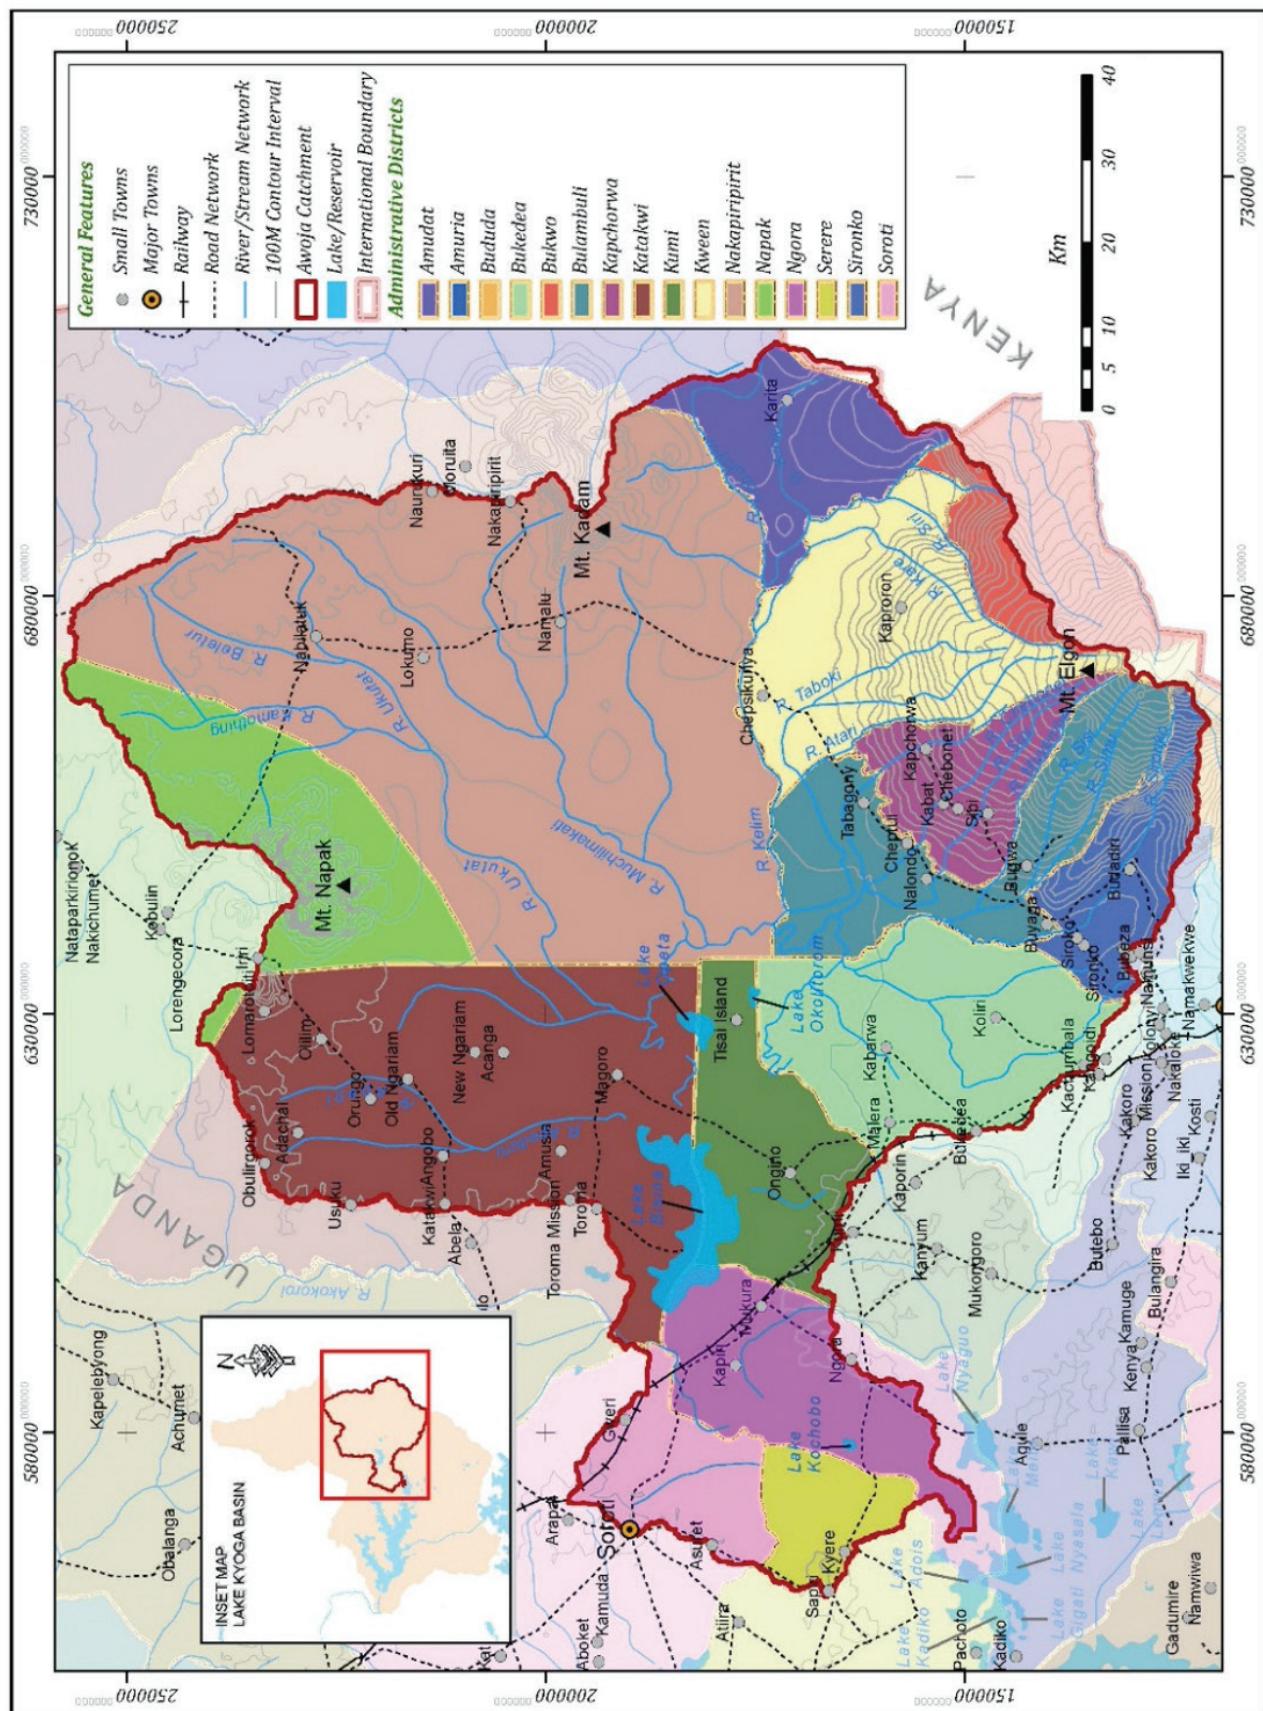

### 4.1 Catchment Physiography

#### 4.1.1 Description

The Awoja Catchment is one of the 11 catchments within the Kyoga WMZ, the others being Okok, Okere, Akweng, Abalan, Kyoga, Sezibwa, Victoria Nile, Lumbuye, Lwere, and Mpologoma. It is situated in the eastern part of the WMZ abutting Mount Elgon, is mountainous to the east and drains into a lake region in the west. The catchment has an area of approximately 11,000 square kilometres (km<sup>2</sup>), which is about 19% of the total area of the KWMZ. The Awoja Catchment covers an area consisting of 14 districts; *Figure 4-1*, which are wholly or partly located within the catchment. However, the administrative borders do not correspond with the hydrological ones.

*Table 4-1: Districts fully or partly included in the Awoja Catchment*

| Districts in the Awoja Catchment |                            |               |         |
|----------------------------------|----------------------------|---------------|---------|
| Wholly in the catchment          | Partially in the catchment |               |         |
| Bulambuli                        | Amudat                     | Nakapiripirit | Bukedea |
| Kween                            | Katakwi                    | Napak         | Soroti  |
| Kapchorwa                        | Kumi                       | Ngora         |         |
| Sironko                          | Bukwo                      | Serere        |         |

*Figure 4-1: Administrative Units in Awoja Catchment*

#### 4.1.2 Sub-catchments

Following the hydrological drainage, fourteen sub-catchments were delineated in the Awoja Catchment and named after the major river in each sub-catchment, *Table 4-2.*

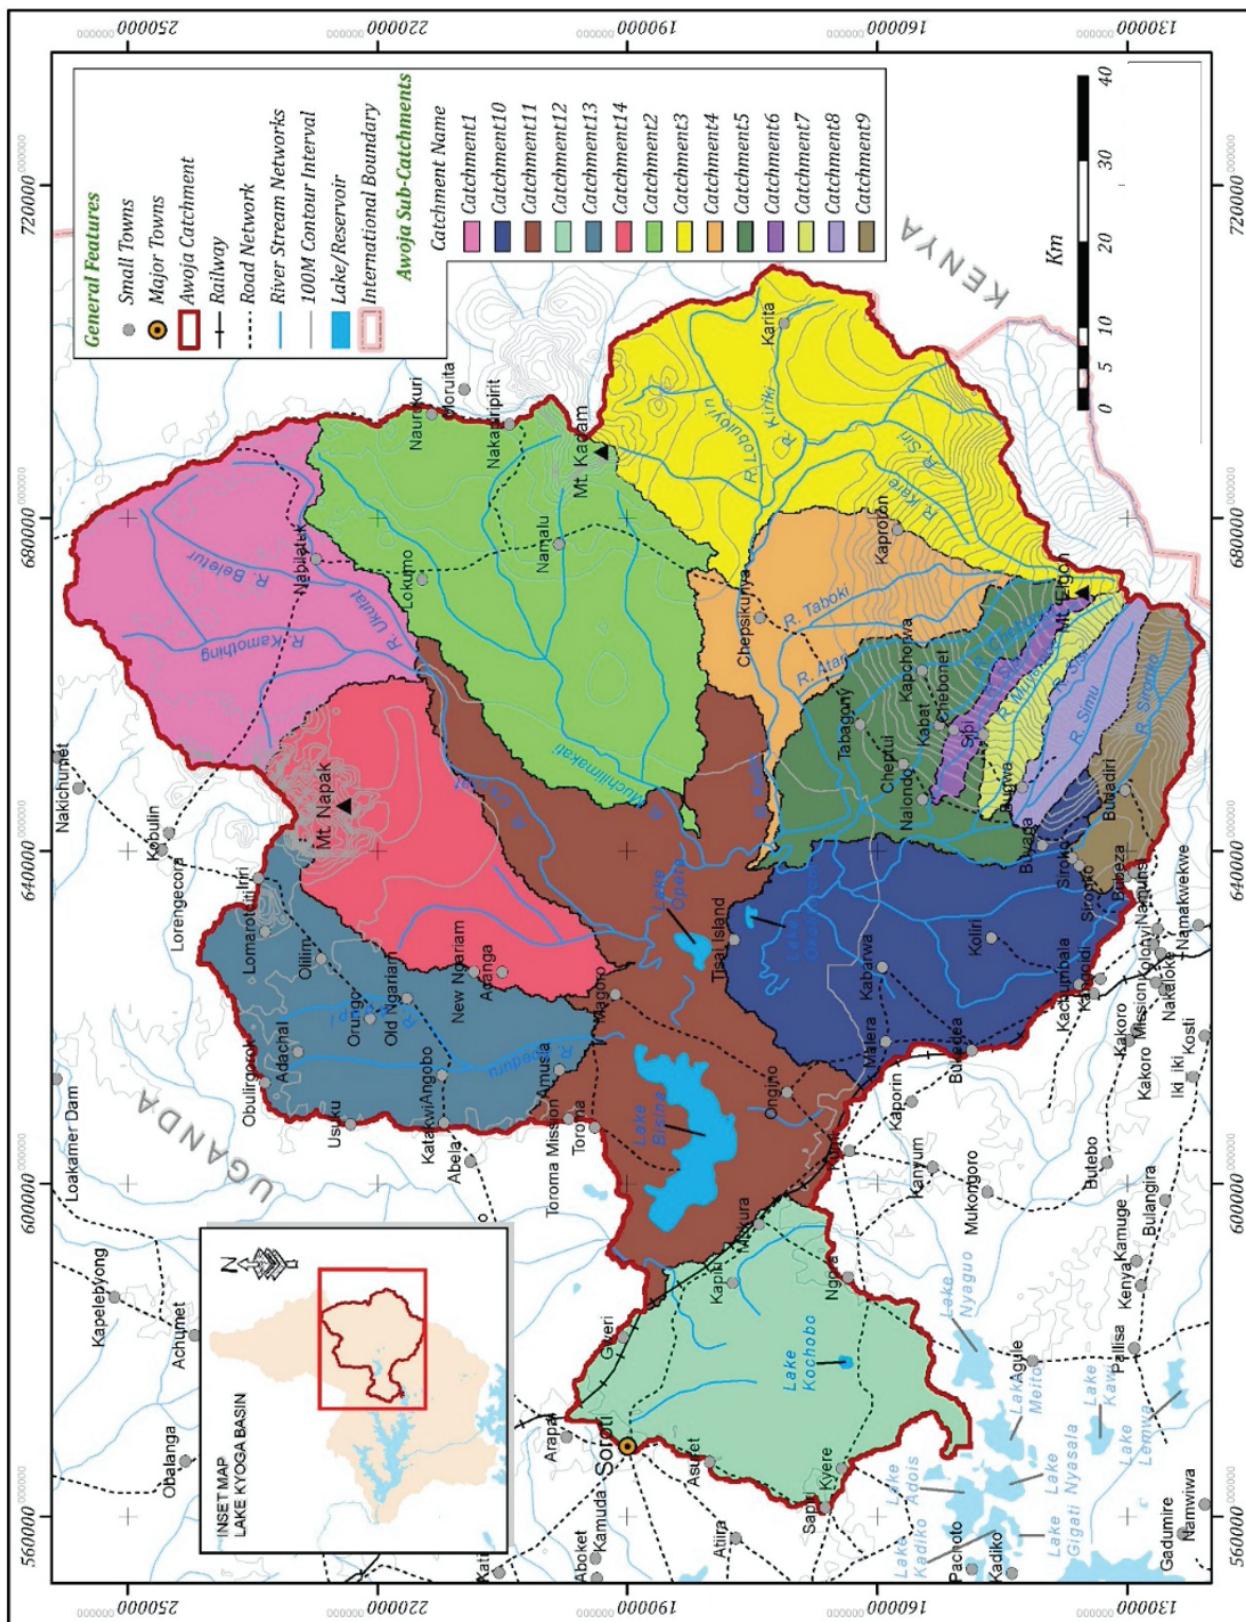

Figure 4-2: Sub-catchments within the Awoja Catchment

Table 4-2: Names of Sub-Catchments in Awoja Catchment

| Sub-catchment | Name             | Sub-catchment | Name            |
|---------------|------------------|---------------|-----------------|
| Catchment 1   | Ukutat           | Catchment 8   | Simu – Sisi     |
| Catchment 2   | Muchilmakat      | Catchment 9   | Sironko         |
| Catchment 3   | Kelim            | Catchment 10  | Lake Okolitorom |
| Catchment 4   | Taboki           | Catchment 11  | Opeta – Bisina  |
| Catchment 5   | Chebonet – Atari | Catchment 12  | Lake Kochobo    |
| Catchment 6   | Sipi             | Catchment 13  | Apeduru – Apapi |
| Catchment 7   | Muyembe          | Catchment 14  | Mt. Napak       |

The linkages of the flow of water between the respective sub-catchments is indicated as follows and shown in Figure 4-3.

- Sub-catchments 1, 2, 13 and 14 flow directly into sub-catchment 11;
- Sub-catchment 3 flows into sub-catchment 4, which flows into sub-catchment 11;
- Sub-catchments 6, 7 and 8 flow into sub-catchment 5, which flows into sub-catchment 11;
- Sub-catchment 9 flows into sub-catchment 10, which flows into sub-catchment 11;
- Sub-catchment 11 flows into sub-catchment 12.

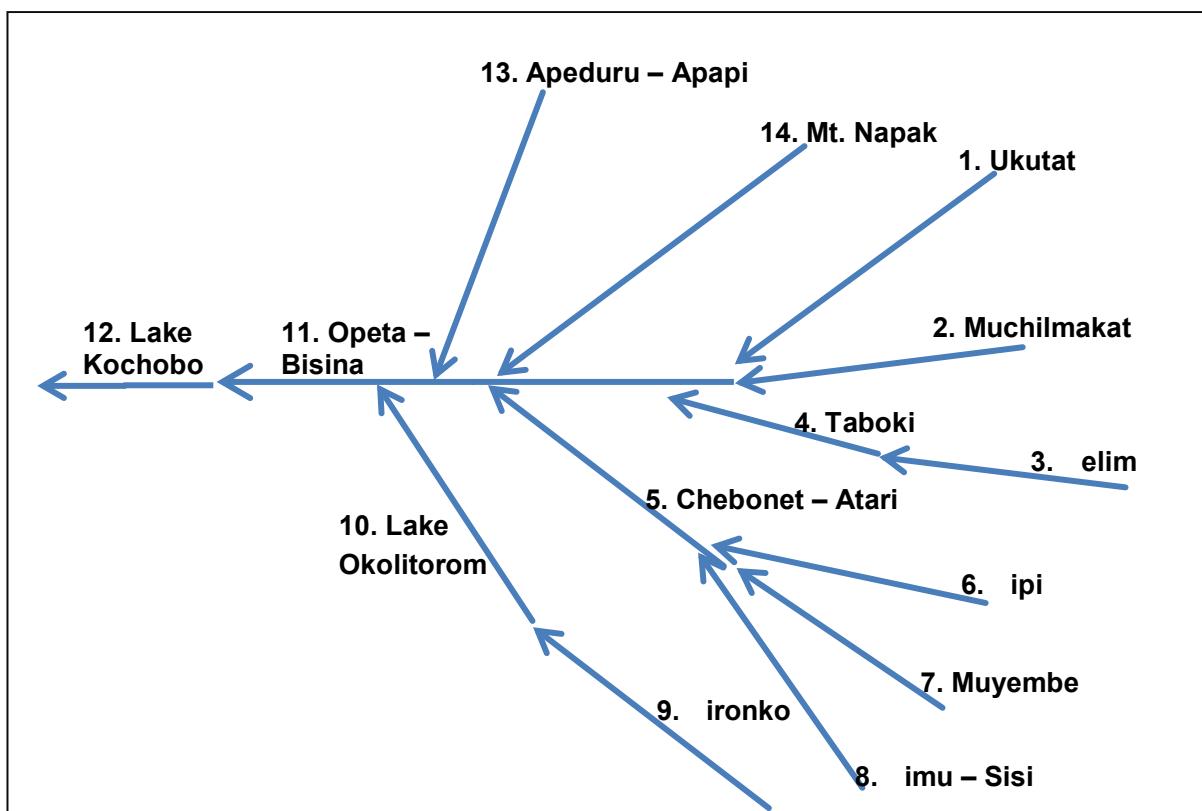

Figure 4-3: Schematic layout of flow between the respective sub-catchments

#### 4.1.3 Climate

Much of the Awoja Catchment lies at an altitude ranging from 940 to 1000masl, with the upland hilly areas rising to 1400m and the high mountains to over 3000m. Although just 2° north of the equator, the altitude results in the catchment having a relatively mild climate, with annual patterns dominated by rainfall rather than by radiation. Much of the catchment is well watered and can support rainfed agriculture, although seasonality varies across sub-catchments and seasonal droughts are a common feature.

The main dry season for the Awoja Catchment is from December to February. The mean annual rainfall is 1103mm, but this is not evenly spread. The western tip and southern part of the Awoja Catchment experiences an average annual rainfall of 1200 - 1500mm/year. The majority of the central and northern part of the catchment has an average annual rainfall of 1197mm with a 10-month period for which evaporation exceeds rainfall. In the higher parts of the Awoja Catchment around Mount Elgon, high rainfall of between 1500 - 2000mm/year can be expected.

The north-eastern part of the Awoja Catchment in the Karamoja region, including Nakapiripirit, Napak and Amudat experience erratic rainfall, averaging 745mm/year, which is far from ideal for crop cultivation.

Evapotranspiration in the Awoja Catchment is high and this has an impact on groundwater recharge, crop production and rangeland productivity. The high evapotranspiration potential in the majority of the catchment tends to exceed annual rainfall except for the Mount Elgon region. The higher mountainous areas tend to have lower mean annual temperatures and, therefore, are less prone to evapotranspiration. High evapotranspiration values are generally associated with large lakes and wetlands and are also influenced by elevation and temperature (NWRA, 2011).

The Awoja Catchment is, therefore, generally well-watered, with the exception of Nakapiripirit, Napak, and Amudat. The entire catchment is characterized by strong seasonality with both floods and droughts prevailing. The downstream plains are highly subject to flooding due to the flat nature of the terrain. This is probably exacerbated by the volumes of silt brought down from higher ground, and by upstream deforestation resulting in both higher surface runoff and greater erosion. Downstream flooding also has a greater impact as the population pressure increases and people encroach further and further into wetland areas that were probably once considered to be no-go zones.

#### **4.1.4 Topography**

The southern edge of the Awoja Catchment is marked by Mount Elgon at the border of Uganda and Kenya. Mount Elgon includes the highest peak in the area, with an elevation of 4,321m. Mount Kadam (3,063m) lies to the north of Mount Elgon, between the districts of Nakapiripirit and Amudat. Mount Napak (2,537m) is further north, between the districts of Napak and Katakwi. The remainder of the basin lies between 1,150masl and 1,033masl. The lower, relatively flat area has large peneplains with occasional granitic outcrops. A significant area of these flat plains comprises wetlands, both permanent and seasonal, fed by the high orographic rainfall that occurs as a result of the ring of surrounding mountains and drains towards Lake Kyoga and the Nile. The high mountains that ring the eastern watershed fall away sharply into flat plains to the west as indicated in *Figure 4-4*.

#### **Key Issues: Topography**

- *Mount Elgon and its piedmont areas are among the more highly populated areas in the catchment as a result of the agricultural potential. Population density, steep slopes (landslides) and incised mountain valleys (flash flooding) enhance the risk for environmental degradation.*
- *Poor agricultural practices on steep slopes resulted in significant siltation and landslides with aggravated consequences.*
- *Farming of very steep slopes must be discouraged and communities assisted to develop erosion protection measures on lesser slopes.*
- *Steeper slopes that have been degraded by agriculture or other land uses should be rehabilitated and natural vegetation cover protected.*

#### **4.1.5 Geology**

Most geological formations in the region originate from the Precambrian supereon. The western part of the basin is dominated by the Gneiss-Granulite complex with some Quaternary sediments (Serere, Soroti, Nguru, Kumi, Bukudea and parts of Sironko and Katakwi). The central part of the basin hosts mostly Quaternary sediments, the Watian Series and the Aruan Series, as well as some Alkali Volcanics. These formations extend to the central north part of the catchment. The Aruan Series and Quaternary Sediments also occur towards the northeastern tip of the catchment. Large sections of the eastern part of the catchment are dominated by Alkali Volcanic formations including the areas around Mount Elgon (one of the oldest volcanoes in East Africa) and Mount Kadam (Kween, Bukwo, Kapchorwa and parts of Bulambuli, Soroti, and Nakapiripirit). The mountains in the northern part of the catchment, in Napak district, also consist of Alkali Volcanics. The portion of Amudat district that lies within the catchment is partially Aruari Series and partly Quaternary Sediments. The geologic formations are illustrated in *Figure 4-5*, with the boundary of the Awoja Catchment traced in red.

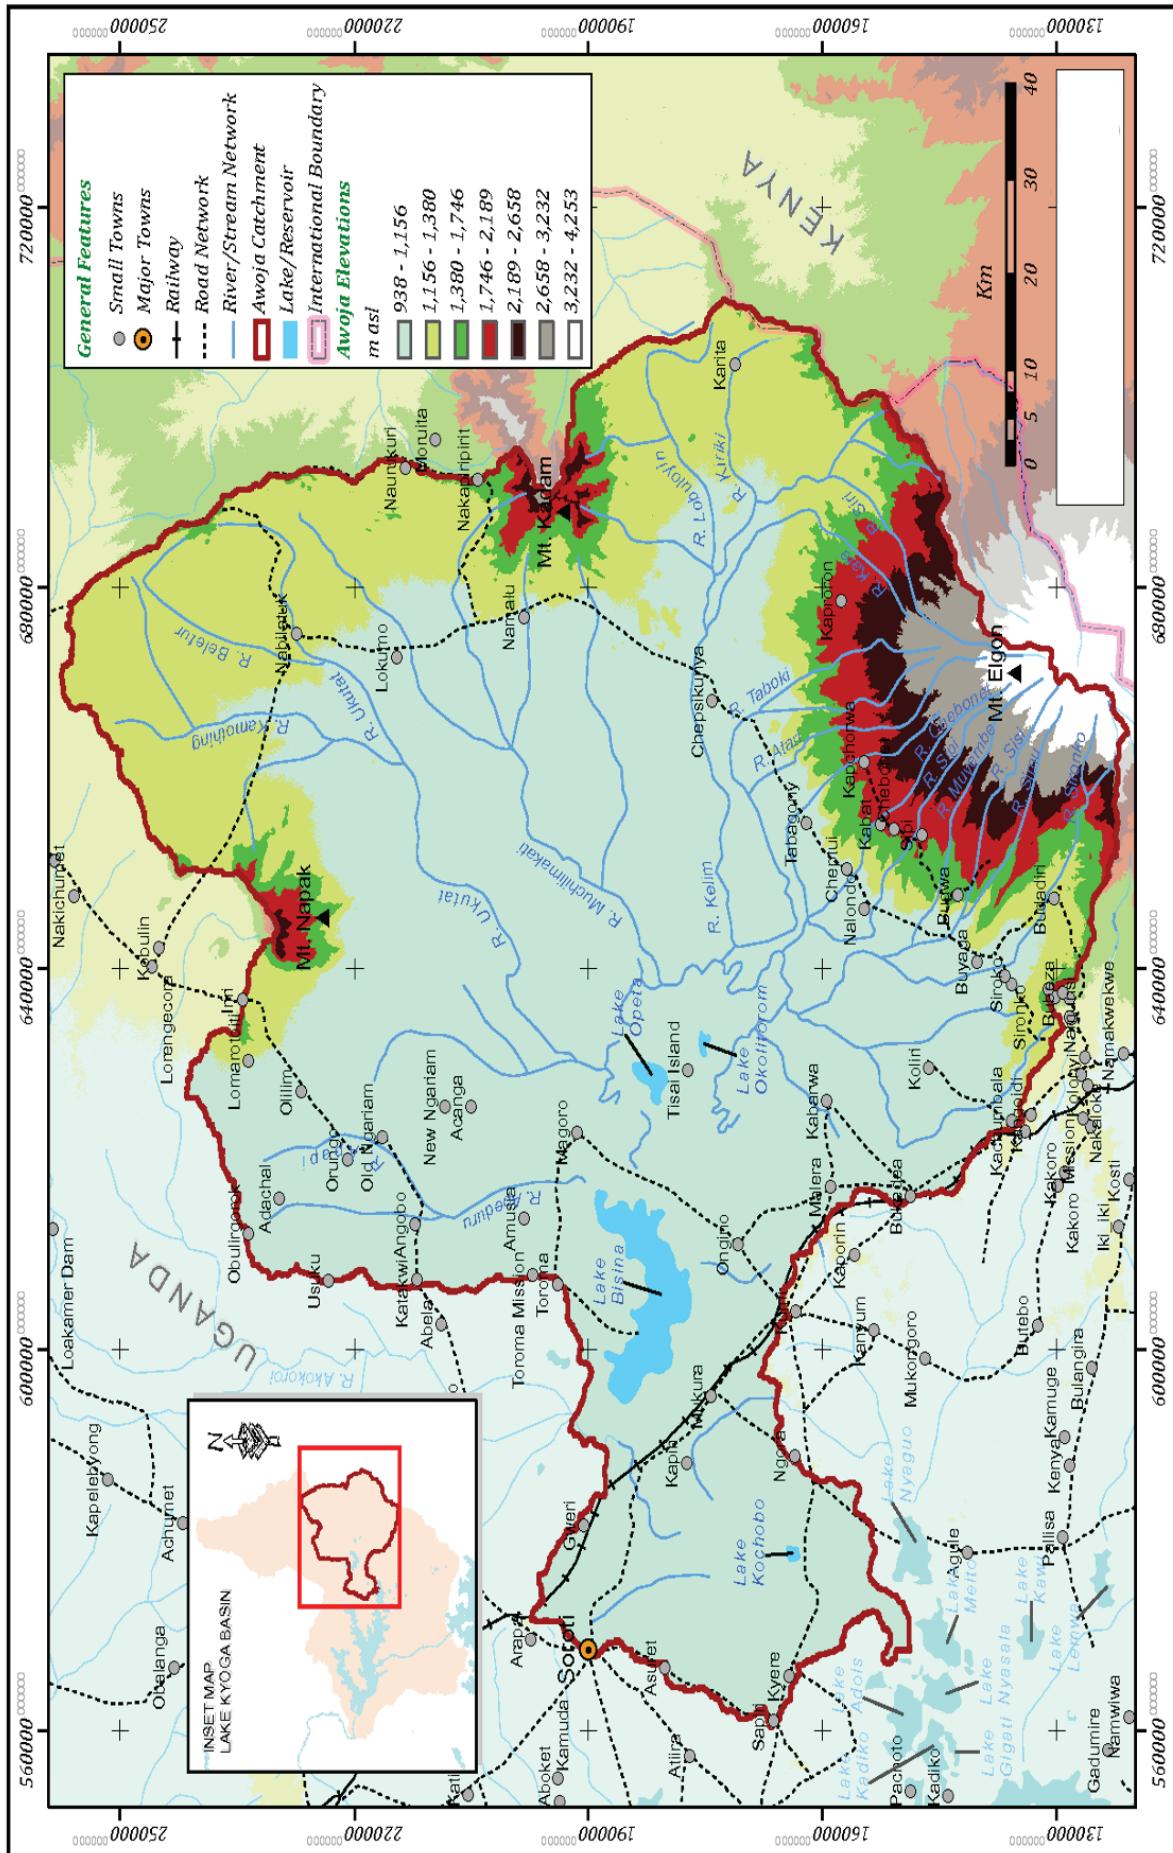

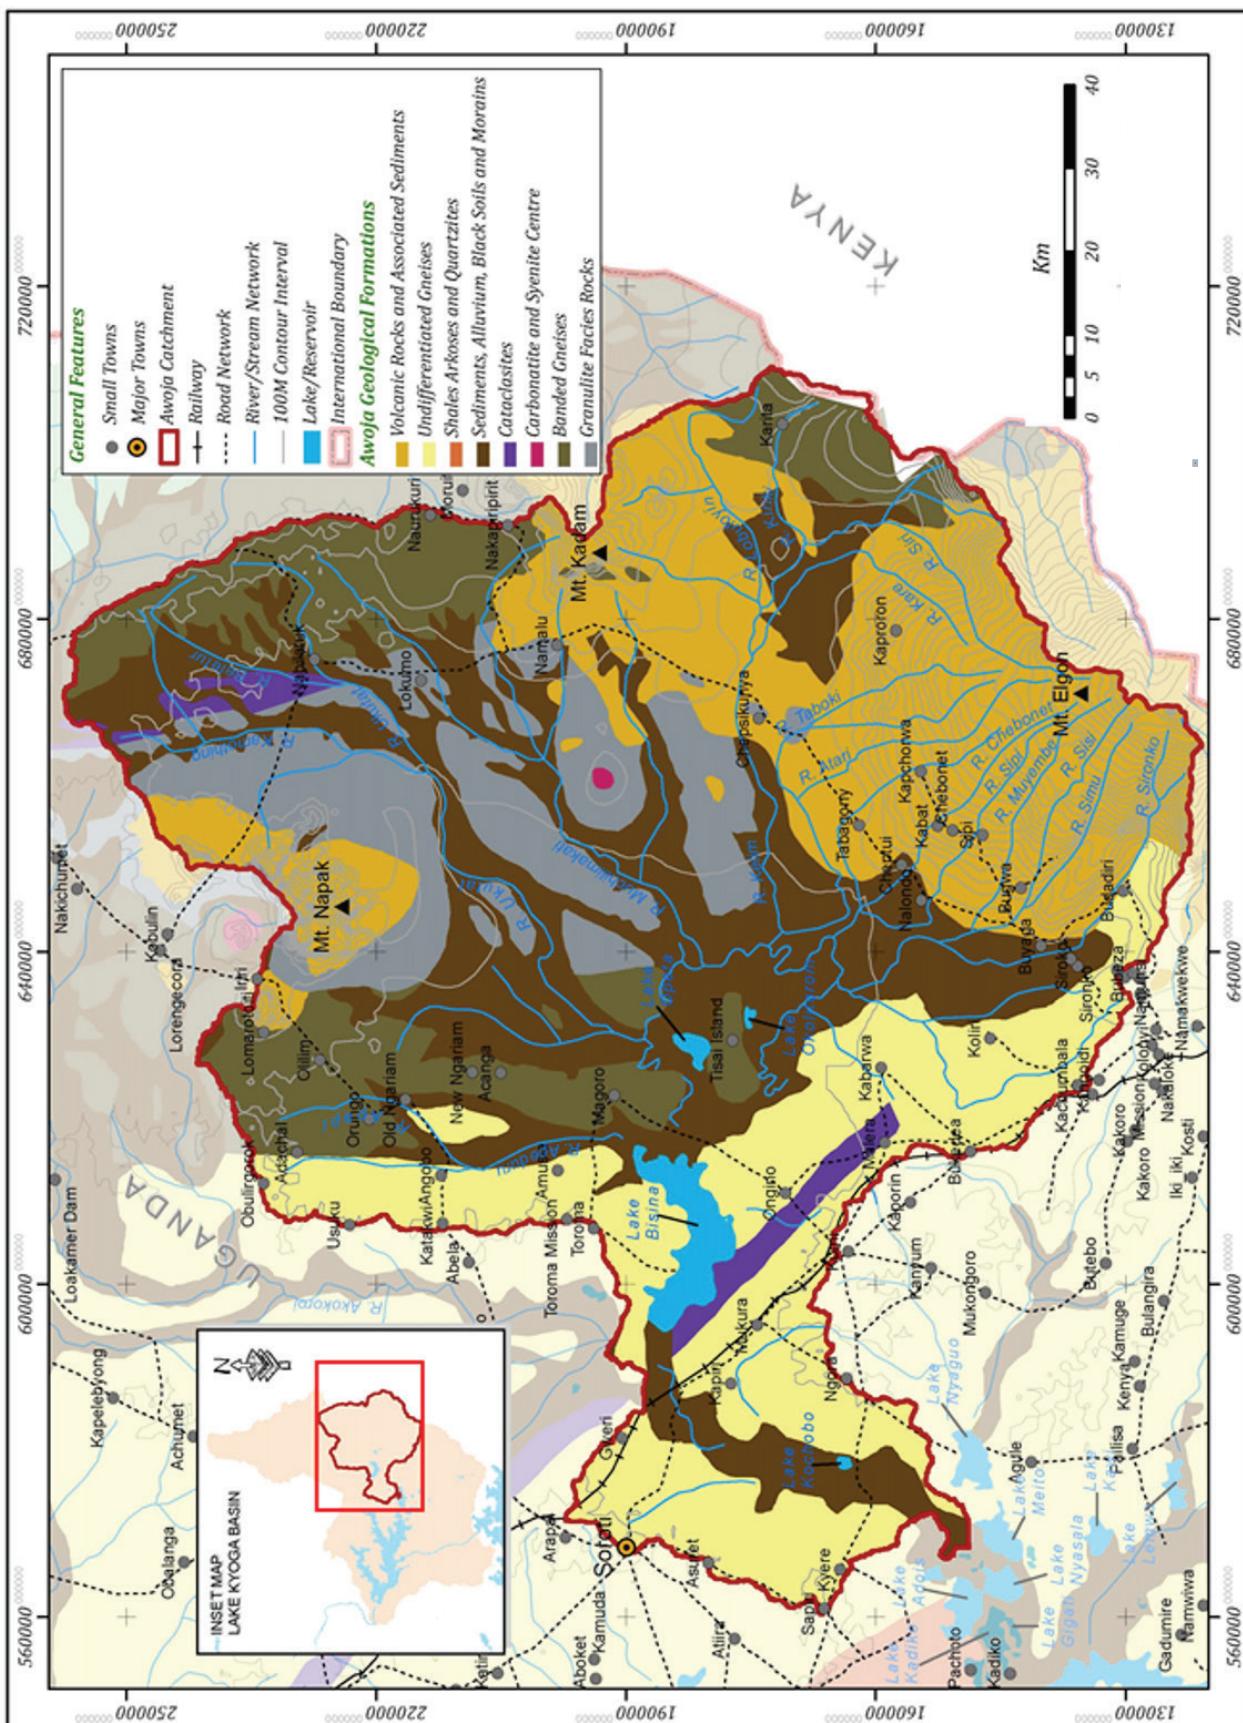

Figure 4-4: Awoja Catchment Elevations

*Figure 4-5: Geological Formations of the Awoja Catchment*

#### 4.1.6 Soils

Most, but not all, of the soil types found in the Napak, Nakapiripirit, and Amudat districts have moderate-high productivity while others are sandy and have moderate or even low productivity. Common key issues related to land degradation here are soil erosion and decreasing soil fertility.

The Ngora, Kumi, and Bukedea Districts have soils that are mainly sandy loam and are associated with limited amounts of plant nutrients due to leaching, erosion, volatisation<sup>1</sup> and poor farming practices. The soils have a coarse texture and are high in iron content, which sometimes fixes nutrients such as Phosphorus (P). Harsh environmental conditions have increased laterisation<sup>2</sup> affecting the quality of the soils (Bukedea District, 2011). In the east of Bukedea and northeast of Kumi district, the soils are dark-heavy volcanic which are rich in mineral nutrients. In lowland/wetland areas, the soils are dark in colour and fairly fertile due to deposition of organic matter by the run-off from upland areas.

Soroti, Serere, and Katakwi soils are mainly ferrallitic (sandy sediments and sandy loams). They are well drained and friable. Low lands contain widespread deposits of alluvium (Katakwi District, 2010; Serere District, 2010; Soroti District, 2004). The land resource is fertile and productive in some parts of these districts with the variation in the soil fertility influenced by the underlying geology. The soil types found mainly in the east of these districts have moderate-high productivity whereas those in the west have very low-low productivity. Generally, most of the soil types predominant in these districts contain sandy sediments and sandy loams, which are easily erodible if exposed.

Kapchorwa, Kween, and Bukwa have soils that can be categorised into three zones, which include Mount Elgon high farmlands, farm-forest and short grass plains. The soils in Mount Elgon high farmlands zone of the Kapchorwa, Kween, and Bukwa districts are derived mainly from volcanic parent material and are typically red clay loam, well drained, highly leached, often acid, but high in nutrients. The soils are generally highly productive. In the forest zone of these districts the soils are primarily reddish-brown loam over deep clay loam sub-soil. In the farmland areas, much of the soils are derived from volcanic parent material. Clay and clay loam soils are common and often acidic, but are of good nutrient supply. In the short grass plains of these districts, soil is clayey, often with vertic properties. Calcareous soils are common on the very flat Sebei plain. The zone extends south to the lower steps, or terraces of Mount Elgon where the clay loam soils are more often acidic. Soil erodibility is high while rainfall is moderate (Kapchorwa District, 2004, 2010). Soils are mapped in *Figure 4-6* and *Figure 4-7*.

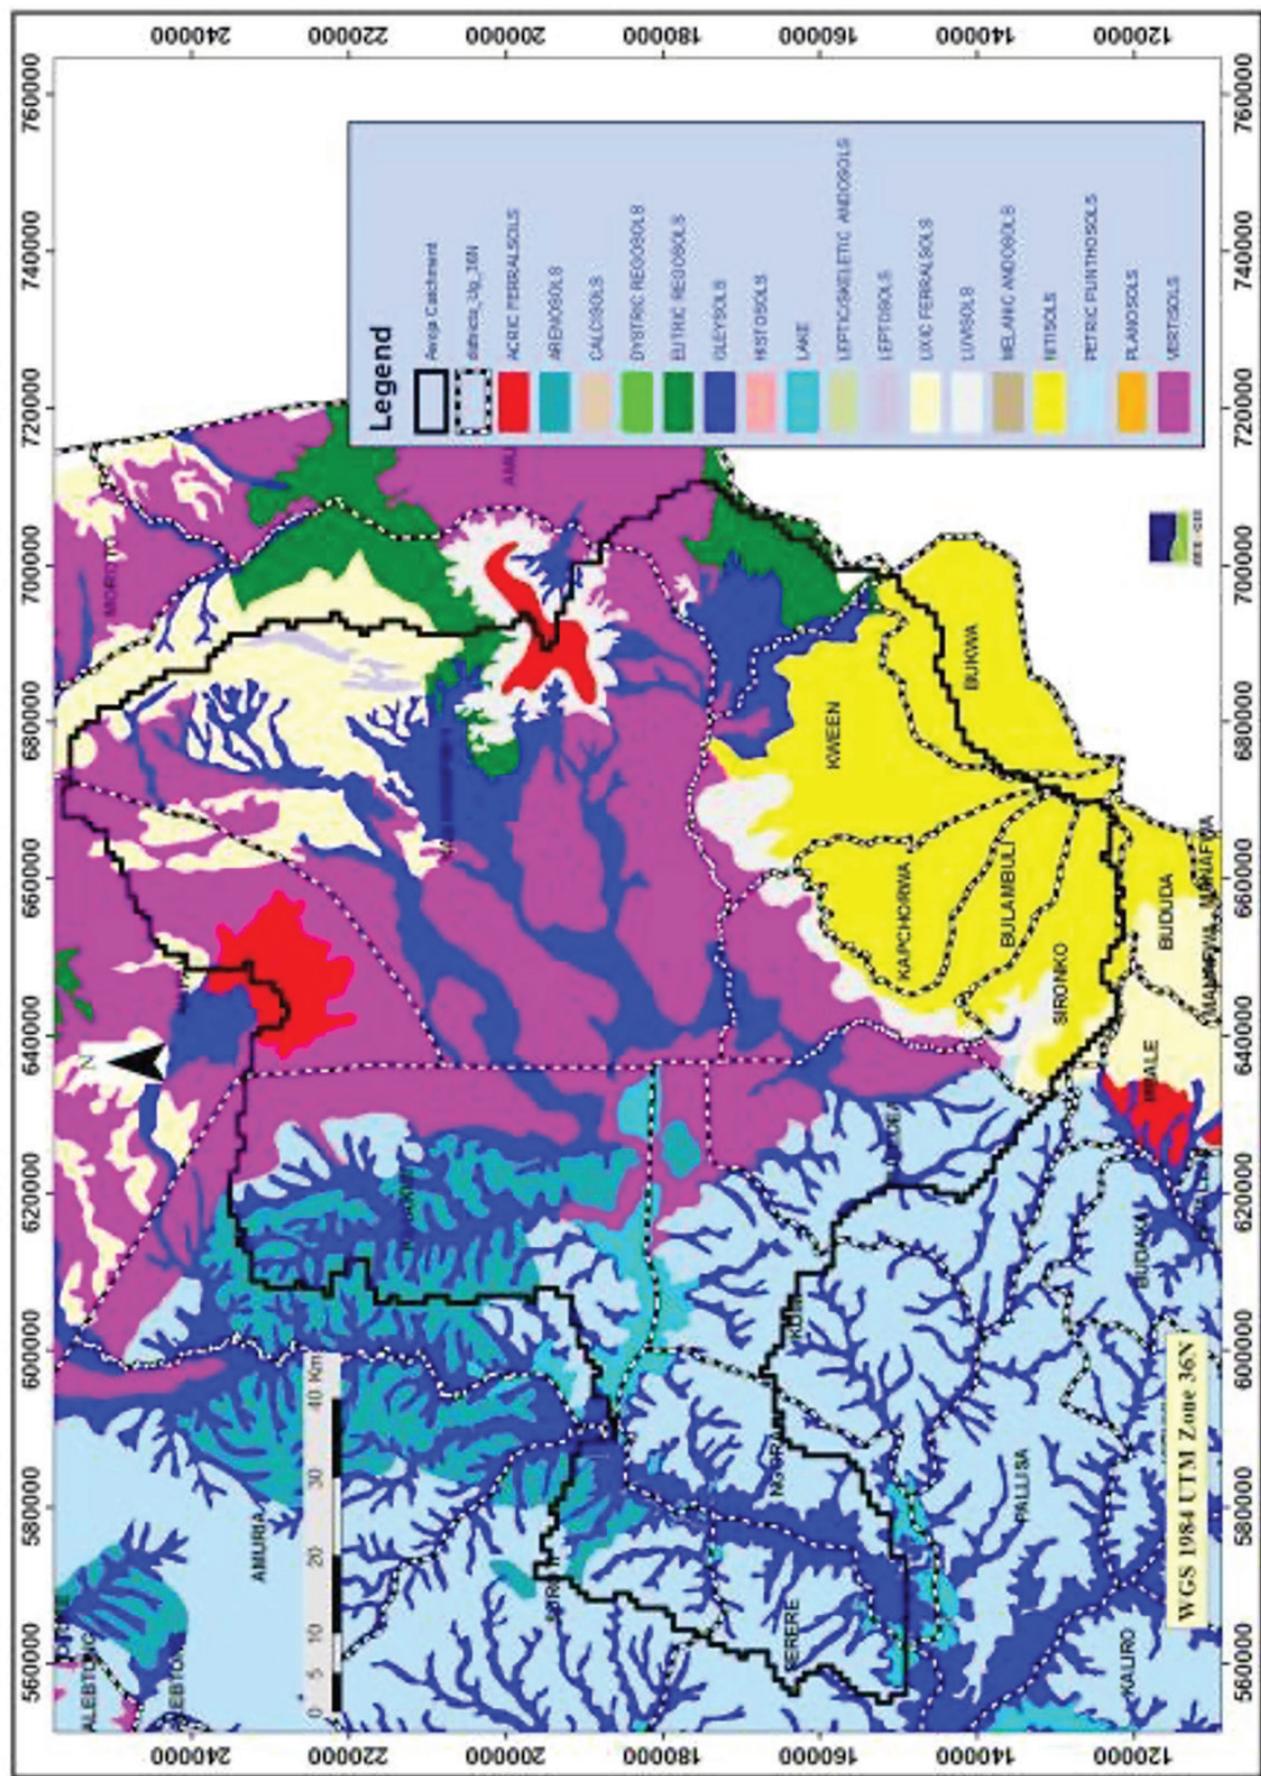

The unsustainable use of wood for fuel in most regions is a threat for soil conservation, silting and landslides and possibly for the local climate. Cheaper (subsidised) sources of energy or woodlots should be made available. This may be possible with the future increase in electricity production and network, as well as with oil production in the country (NEMA, 2009).

The soils of the Awoja Catchment are characterised by their high susceptibility to erosion, which is clearly visible in the high levels of silt carried in streams and sedimentation in wetlands and basins. Soil erosion and siltation are without doubt a major environmental risk in the catchment and should be the dominant consideration in both land use and catchment management practices and strategies. Areas with higher rainfall, such as those around Mount Elgon, are more intensively farmed. This unfortunately coincides with steeper slopes where erosion is more problematic.

According to *The Identification of a Multipurpose Water Resources Management and Development Project in the Lake Kyoga basin in Uganda: Diagnostic / Situational Analysis Report* (NELSAP, 2012), evidence from soil scientists and agronomists suggests that Uganda's soils were considered to have a high natural fertility, but there has been a continual depreciation in plant nutrients with little systematic replacement. This has resulted in a lowering of productivity in areas under continual cultivation. An average of 1 to 2 kg/ha of inorganic plant nutrients are used as a supplement, which is considerably lower than the 9kg/ha average for sub-Saharan Africa. The use of organic nutrient cycling agricultural systems should be promoted ahead of, and augmented with, inorganic fertilisers where needed.

<sup>1</sup> McGraw-Hill Science & Technology Encyclopedia: The process of converting a chemical substance from a liquid or solid state to a gaseous or vapor state. Other terms used to describe the same process are vaporization, distillation, and sublimation.

<sup>2</sup> Oxford Dictionary of Geography: The formation of lateritic soils. Laterization takes place in warm climates where bacterial activity takes place throughout the year. Consequently, little or no humus is found in the soil. In the absence of humic acids, iron and aluminium compounds are insoluble and accumulate in layers in the soil. Silica is leached out.

*Figure 4-6 : Soil Types in the Awoja Catchment*

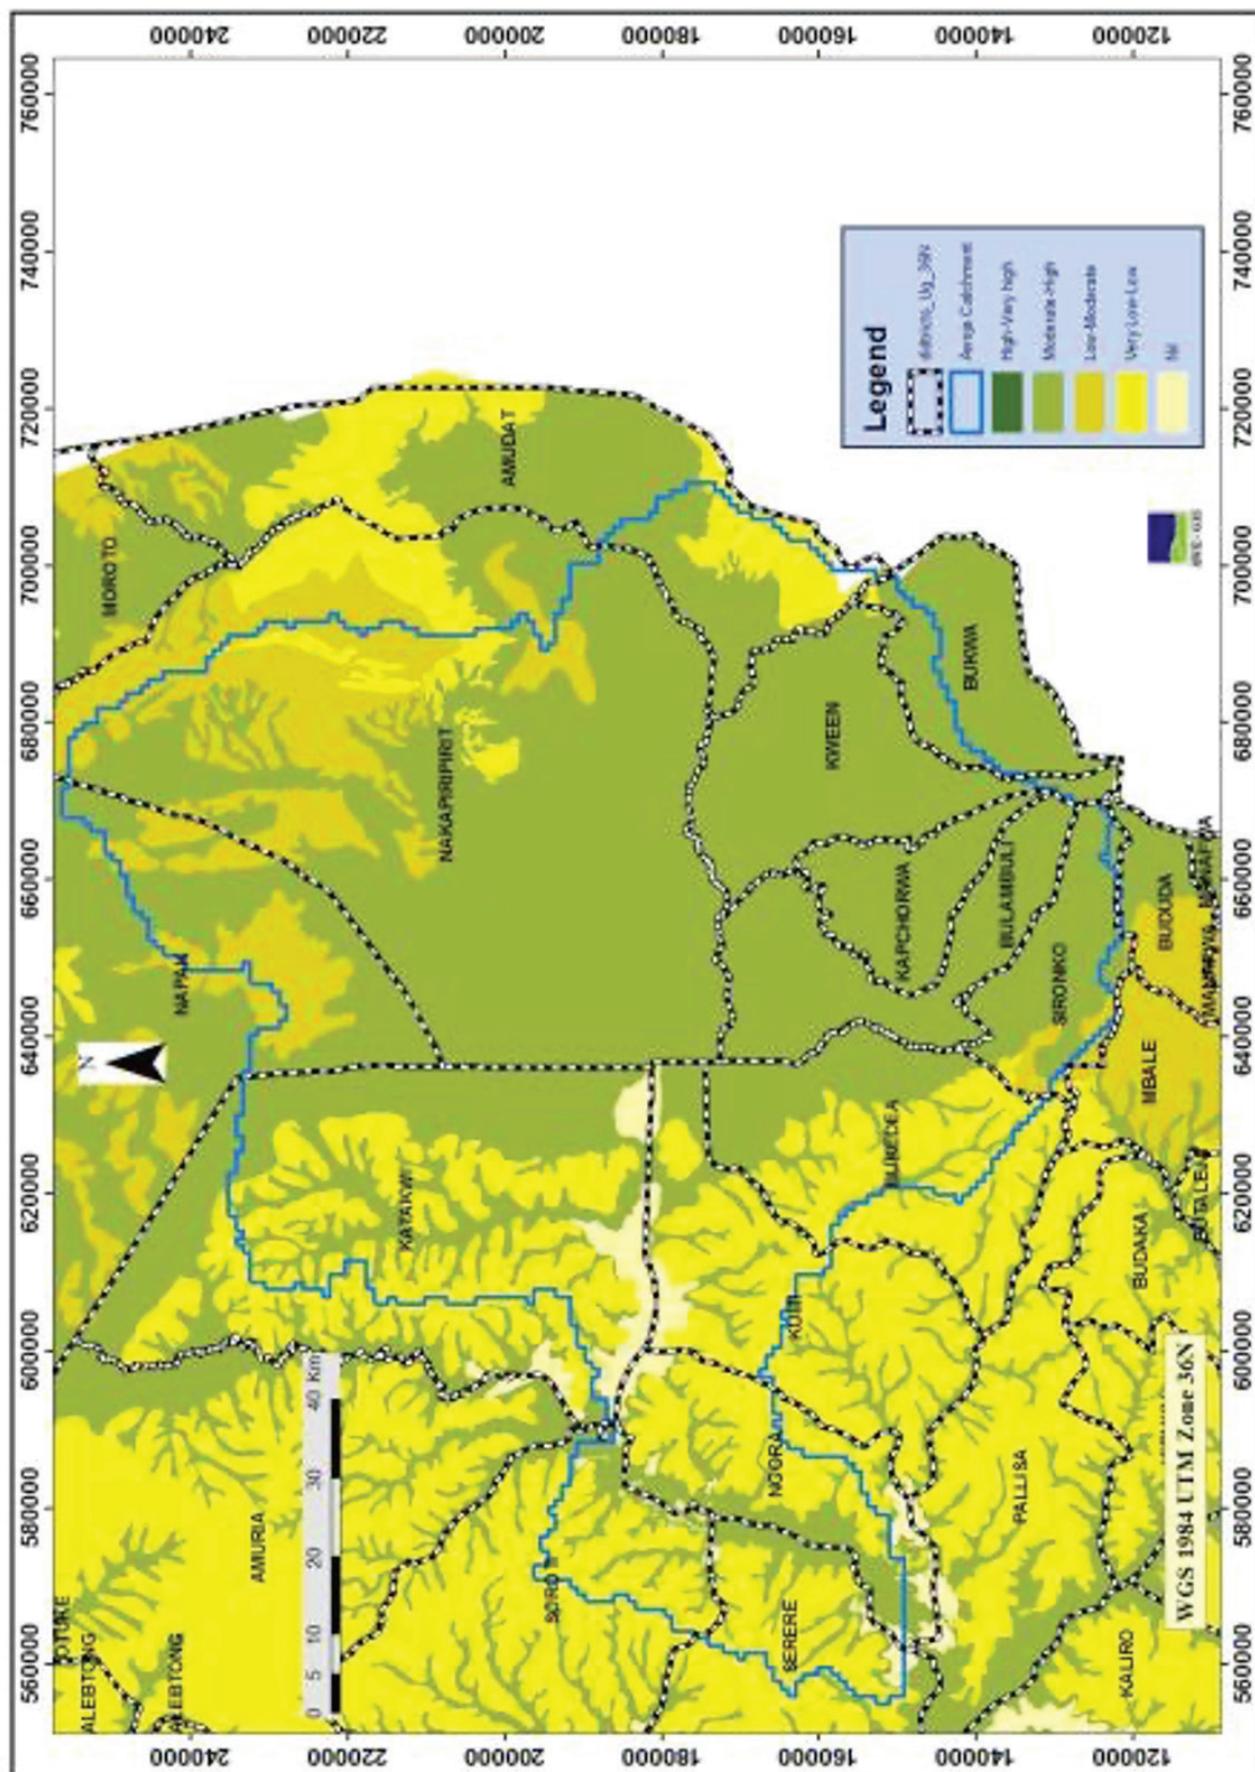

Figure 4-7: Soil Productivity

## **4.2 Water Resources**

Awoja Catchment is water rich, but the surface water and groundwater resources are unevenly distributed, with the western and southern parts of the basin having more abundant surface water resources while the northern and north-eastern parts of the basin are far drier. As the water demand in Uganda increases along with the growing population, it is becoming ever more essential to gain a quantitative knowledge of the surface and groundwater systems in order to effectively manage the resources in a sustainable manner that will benefit both the growing communities and the natural ecological systems. This section of the report provides knowledge that is crucial for sustainable planning and management of water resources within the Awoja Catchment.

### **4.2.1 Surface water**

Surface water in the Awoja Catchment constitutes rivers, lakes, wetlands and temporary wetlands. Very limited infrastructure has been constructed for the utilisation of surface water for productive purposes including hydropower generation, domestic and industrial water supply, irrigation, and for accommodating floods and droughts.

#### *4.2.1.1 River systems, lakes, and wetlands*

Awoja Catchment has a network of rivers, lakes, and temporary wetlands all of which play an important role in the catchment and need to be preserved and managed effectively to maximise their functionality in the catchment.

### **Rivers**

Important rivers in the Awoja Catchment include the Awoja, Sironko, Simu, Sisi, Muyembe, Sipi, Chebonet, Atari, Tabok, Kelim/Greek, Muchilmakat, Ukutat, Namalu, Apeduru, Apapi, Agu, and Abuketi rivers. These rivers typically flow from the east or north to the south-western part of the catchment, converging in Soroti district, where the catchment's outlet is situated. Very limited infrastructure has been constructed for the utilisation of surface water for productive purposes. However, rivers are used for domestic water, livestock watering, clothes washing, bathing, fishing, brick making and small scale irrigation along river banks. The rivers are often characterised by heavily degraded, eroded and often collapsing river banks. There are also high levels of sediment deposition. The state of the river banks and the river siltation increase flood risk. Altogether the increased degradation of land through unfavourable land use practices, overgrazing and deforestation enhances the problem of flooding.

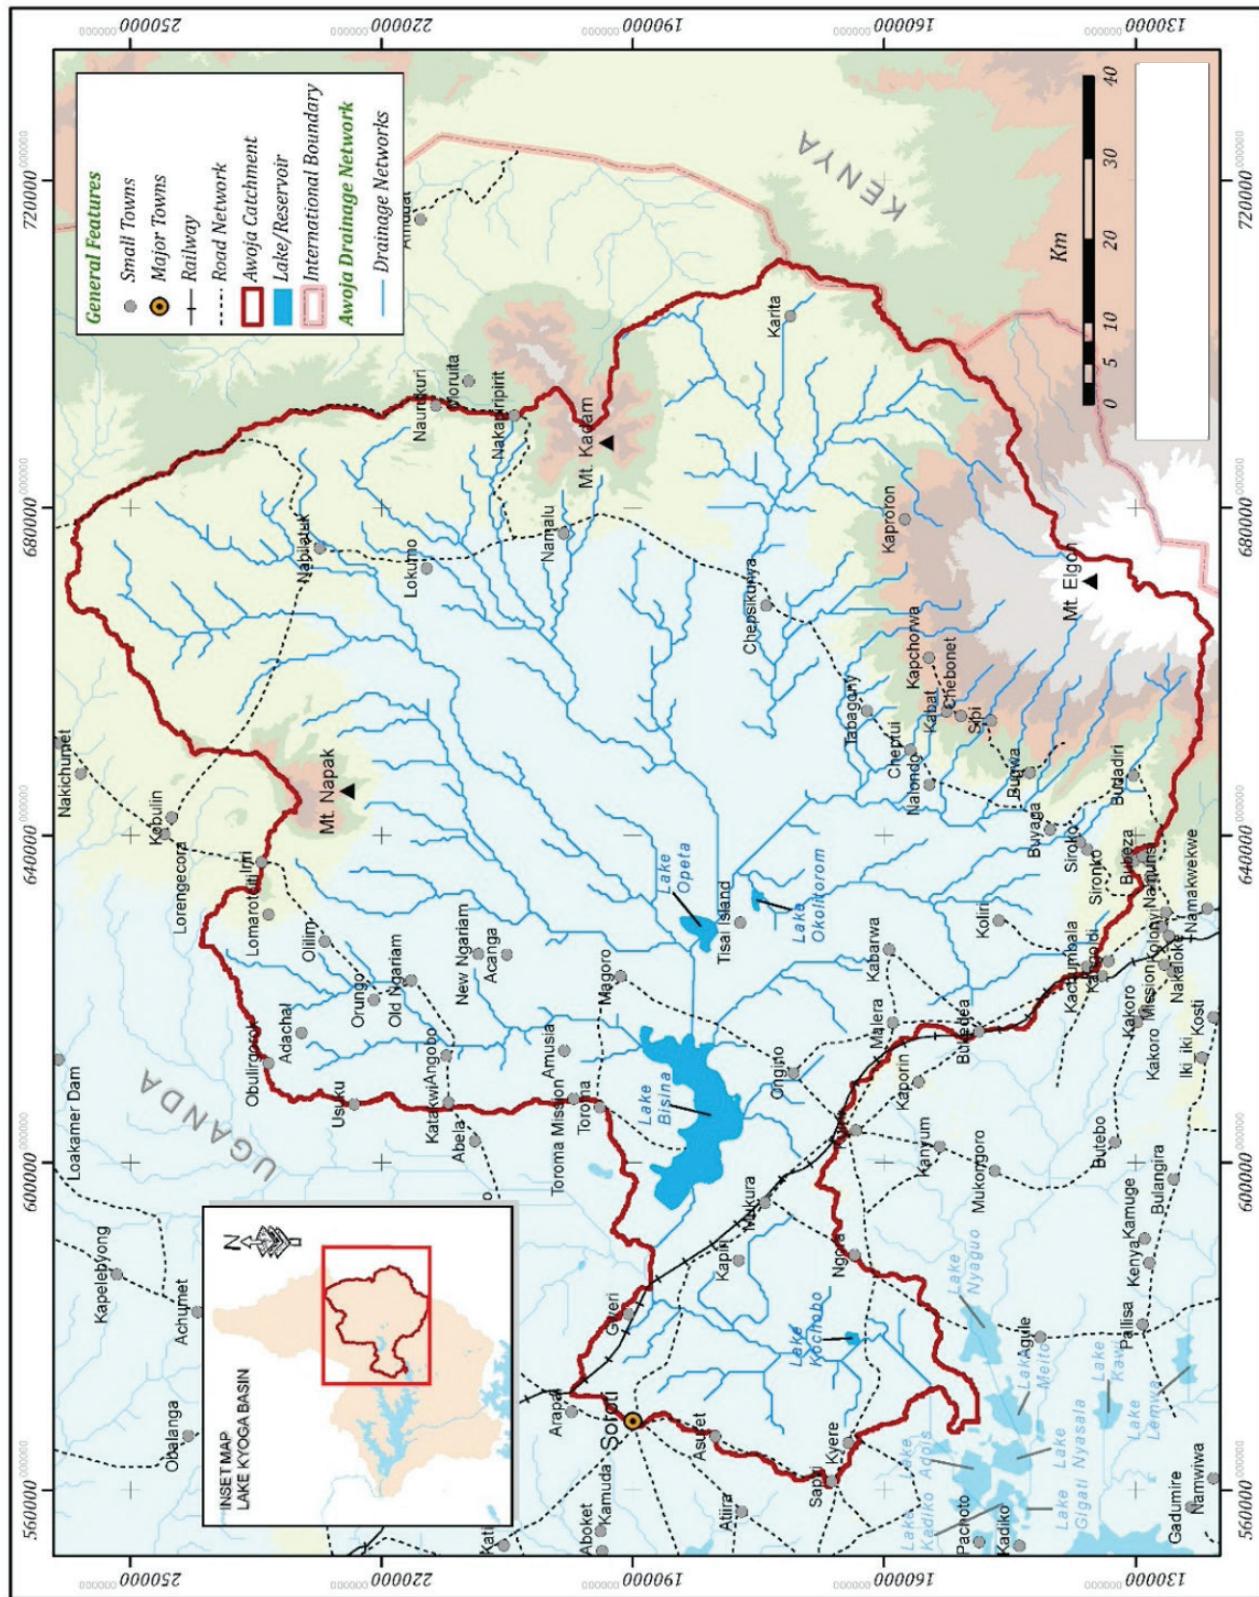

Figure 4-8: Drainage network in Awoja Catchment

## Lakes

The three largest lakes are Lake Bisina, Lake Opeta, and Lake Okolitorum. Lake Bisina and Lake Opeta and associated swamps together extend over an area of 120,000ha, with an open water area of approximately 25,000ha. These lakes are situated at an elevation of 1,040 – 1,060masl. Lake Opeta lies at 1°39'N and 34°09' – 34°14'E. It is 10km long and 5km wide and has an open water area of 4,000ha. Wide swamps occur on the fringes of the lake except along parts of the southern shore. The permanent swamps around Lake Opeta cover around 30,000ha. The Ukutat,

Muchilmakat, and Kelim rivers all enter Lake Opeta through a zone of permanent swamps east of the lake, above which each river has a seasonal floodplain. The Kamirya and Sironko Rivers flowing from Mount Elgon also enter Lake Opeta, but do so through the swamps on the southern shore, and neither stream has an important floodplain.

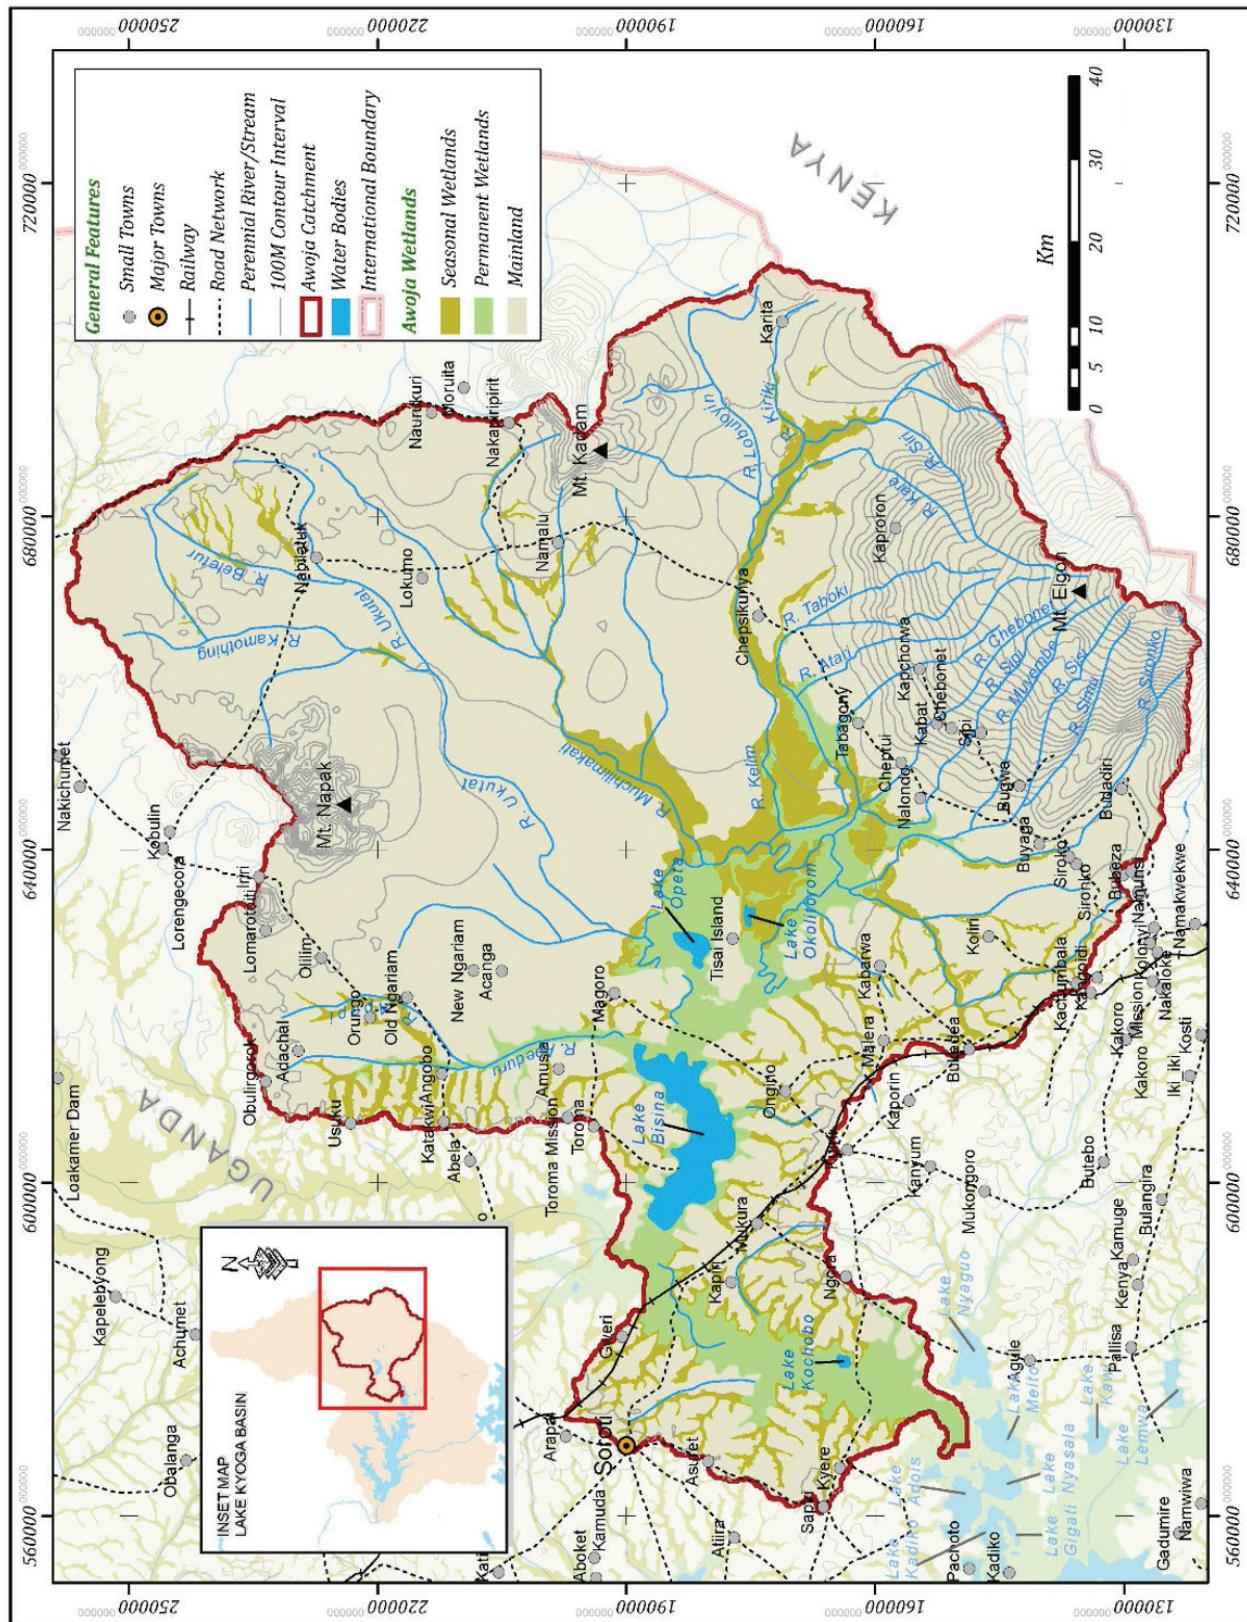

Figure 4-9: Rivers, lakes and wetlands in the Awoja Catchment

Water from Lake Opeta flows out of the western side of the lake through a dense swamp over 5km to Lake Bisina. This larger lake is situated at  $1^{\circ}35' - 1^{\circ}44'N$  and  $33^{\circ}49' - 34^{\circ}06'E$ . It is 30km long and up to 9km wide, with a maximum surface area of 21,000ha at high water. The largest river that flows into Lake Bisina is the seasonal Apedura River,

rising to the north on the slopes of Mount Akim. The Apedura River has a floodplain 30km long and up to 6.5km wide, which at high water covers 16,500ha. Similar to Lake Opeta, Lake Bisina is oriented east to west and it drains from its western end through swamps, to the Okere system, which leads to the swamps at the head of the Mpologoma arm of Lake Kyoga.

## **Wetlands**

The Awoja Catchment has both permanent and seasonal wetlands mainly located in Kumi, Soroti, and Katakwi and they account for more than one third of their total district areas. *Table 4-3* shows the wetland area within Awoja accounting for 4,195 square kilometres, consisting of original wetlands (which form a larger part) and converted wetlands (NELSAP, 2012).

*Table 4-3: Wetland Areas within Awoja*

| District       | District                | Wetland                 | Area                      | Original                        | % Converted | Wetland       |
|----------------|-------------------------|-------------------------|---------------------------|---------------------------------|-------------|---------------|
|                | Area in km <sup>2</sup> | Area in km <sup>2</sup> | Converted km <sup>2</sup> | Wetland Area in km <sup>2</sup> |             | % of District |
| Kumi           | 2,848                   | 989                     | 61                        | 1,050                           | 6.2         | 34.7          |
| Soroti/Katakwi | 10,016                  | 3,206                   | 9                         | 3,215                           | 0.3         | 32.0          |
| <b>Total</b>   |                         | <b>4,195</b>            | <b>70</b>                 | <b>4,265</b>                    |             |               |

Districts like Bukwo, Sironko, Kween, and Kapchorwa have a few wetlands due to their hilly topographical nature with few low-lying areas. The rest of the districts, within the catchment have a big percentage of wetlands in their low-lying areas into which most of the seasonal streams and rivers from the elevated lands drain. In Kumi, Bukedea, and Ngora districts over 80% of the wetlands have been modified and almost all permanent wetlands are now seasonal (Bukedea District, 2011; Kumi District, 2010). Most of the wetland systems in the catchment are dominated by grassland. Common species in all these wetlands include *Echinochloa sp.*, *Cyperus aticulata*, *Setaria spp.*, *Hyparrhenia* grass species, *Typha* (Ateso-Amusala), *Cyperus papyrus* (Ateso-Aladoi), *Phragmites* (Ateso-Ebilo) and swamp forests. In the lowland wetlands, *Acacia* spp. and *Syzgium* spp. are found growing within or along the wetlands.

Large volumes of surface water is absorbed and stored in its wetlands. The wetlands thus function as fresh water reservoirs that slowly release water, either underground to replenish aquifers, or laterally towards the streams and rivers. The slow release of water increases water availability during the dry season for domestic use, edge cultivation, and livestock watering; keeps boreholes, shallow wells and springs functional. Wetlands also play a key role in filtering pollution. They provide considerable goods and services and are used for water storage, livestock grazing and natural tree harvesting (World Bank, 2011). Wetlands are further used for farming and fishing and provide construction material and fuel. Wetlands also provide flood attenuation, sediment capture and opportunities for eco-tourism. It is essential that these wetlands are preserved to maximise their functionality in providing these services.

### *4.2.1.2 Surface water potential*

In order to determine the potential surface water available for development, an attempt was made to recreate the natural catchment situation without any abstraction. A thorough estimate of the potential surface water available for development in each sub-catchment was done with consideration of wetland evaporation. However, various issues related to the hydrological monitoring network were encountered which affect the reliability of the runoff determined per sub-catchment and for the Awoja Catchment as a whole. The monitoring of all hydrological elements needs improvement including the monitoring of: rainfall; streamflows; evaporation; groundwater yields and levels; siltation volumes in rivers, dams, lakes and wetlands; lake and wetland water levels; and water quality parameters.

The total natural runoff for the Awoja Catchment is approximately 1,615MCM/yr. The net runoff from the Awoja Catchment, after deducting estimated evapotranspiration losses of 384MCM/yr in the wetlands, is estimated to be 1,232MCM/yr. A summary of the natural runoff in each sub-catchment, without consideration of wetland losses, is given in *Table 4-4*. The Mean Annual Precipitation (MAP) and unit runoff for each sub-catchment were also indicated.

As some of the sub-catchments are interlinked it is necessary to consider the cumulative stream flows in the sub-catchments. In *Table 4-5*, these cumulative stream flows are indicated along with the wetland losses in sub-catchment 11.

*Table 4-4: Natural runoff by sub-catchment in the Awoja Catchment (excluding wetland losses)*

| Sub-catchments |                 | MAP (mm)     | Area (km <sup>2</sup> ) | Unit runoff       |              | Natural runoff (mm) |
|----------------|-----------------|--------------|-------------------------|-------------------|--------------|---------------------|
| ID             | Name            |              |                         | m <sup>3</sup> /s | MCM/yr       |                     |
| 1              | Ukutat          | 800          | 1053                    | 0.5               | 16           | 16                  |
| 2              | Muchilmakat     | 1,250        | 1497                    | 4.5               | 143          | 95                  |

#### *4.2.1.3 Strategic Implications and Opportunities for Surface Water and Wetlands*

Surface water is generally more easily accessible than groundwater, however its safe utilisation is generally associated with higher purification costs than for groundwater since surface water is more easily polluted than groundwater (JICA, 2011). Surface water can more readily be used without treatment for production purposes where drinking water quality standards are not required. Ultimately however, the degrading quality of surface water may lead to future contamination of groundwater and, therefore, this issue should be addressed.

As mentioned, wetlands have an important role to play in the catchment and need to be preserved and managed effectively to maximise their functionality in the catchment. As the wetlands serve multiple purposes it may be necessary to identify and allocate certain portions of the wetlands for certain roles. Wetlands need to continue providing flood attenuation unless significant storage structures are developed in the catchment for this purpose. Wetland encroachment needs to be addressed to ensure that the growing population residing near the wetlands are not endangered during flood events due to inappropriate land use choices. A distinction should be made between which wetland areas to preserve and protect for biodiversity conservation and which wetland areas to allocate for the continuation of certain essential livelihood practices such as cattle grazing, crop cultivation, papyrus harvesting, and fishing. This wetland area use allocation will be greatly influenced by the current state of the wetland.

Typically, wetland areas in close proximity to rural settlements and without too large a threat from flooding would be appealing for the continuation of livelihood practices. If people are living in areas that will become protected areas, people may need to be relocated.

Similarly, the areas that have remained the least exploited and have maintained their natural fauna and flora best would be more appealing for further protection. Ideally, the influence of the various wetland activities on each other, as well as on the natural wetland needs to be evaluated thoroughly in order to establish best management practices.

In order to maintain a sustainable balance between livelihood use and conservation, exploitation limits will need to be set and be enforced to ensure that the wetlands aren't overgrazed, over-fished and generally over-exploited. The limits will need to be determined through thorough investigation.

The wetlands also need to be recognised for their important role in water purification and this role needs to be communicated to the local communities.

Further, the wetlands need to be recognised for the ecotourism potential they have. Ecotourism should be promoted in areas set aside for biodiversity protection.

More information regarding the wetlands and their current state and use will need to be sourced, or a study will need to be done to inform a plan for accurate and effective wetland management. The Wetland Sector Strategic Plan and the associated documents for community involvement and sensitization proposed by the Wetlands Management Department (WMD) of MWE may be useful for the creation of an integrated wetland multipurpose development and conservation plan.

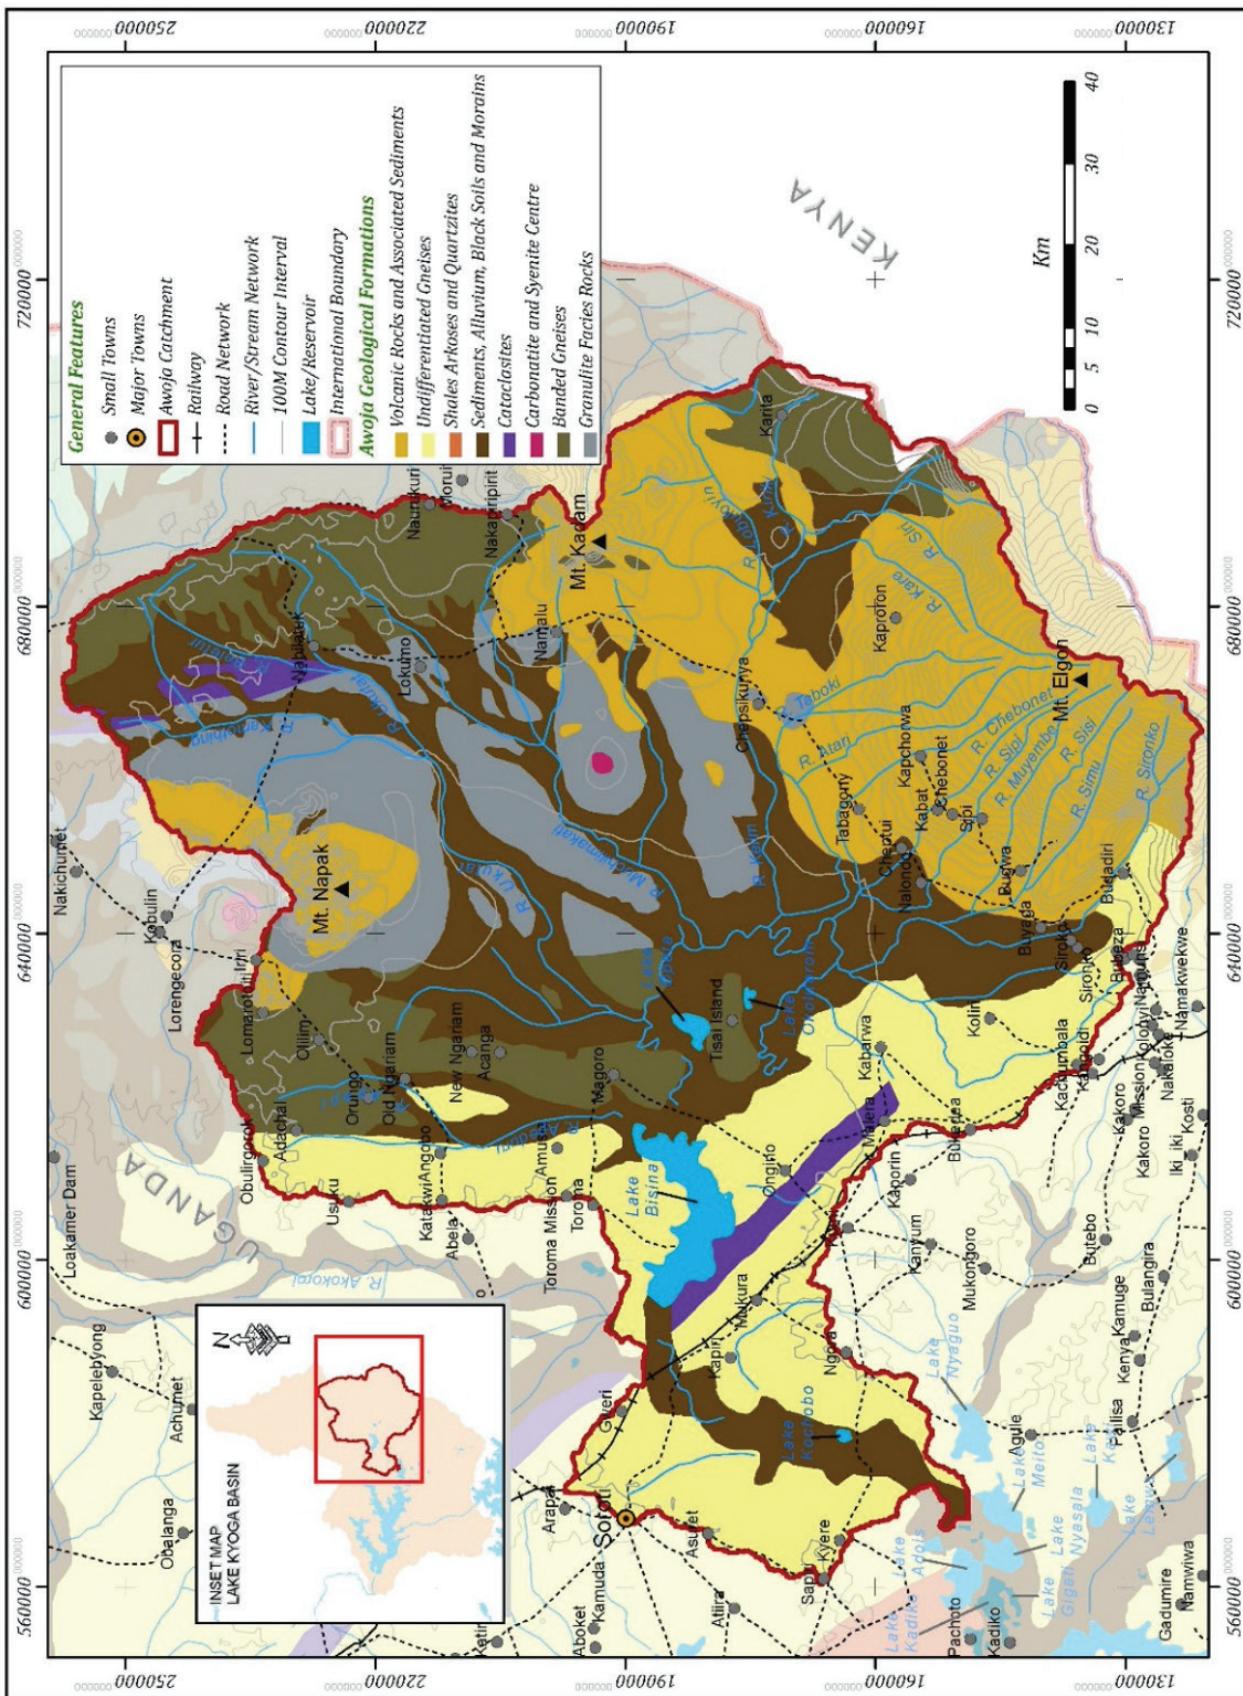

#### *4.2.2 Potential Groundwater Yield*

The potential groundwater yield<sup>3</sup> that can be achieved through sustainable development of the groundwater resources in the catchment was re-assessed at a sub-catchment level (Murray, R, 2013), based on existing GIS coverages and previous assessments completed for groundwater in the area.

The study undertaken by JICA (2011) provided the most detailed assessment of the Awoja Catchment's groundwater situation and included numerous borehole pump tests. The work done by JICA was chosen as a basis for determining a more realistic potential groundwater yield per sub-catchment in the Awoja Catchment. The GIS coverage of the geology of the area, provided by the MWE, was considered *Figure 4 -10*.

---

<sup>3</sup> The term "potential groundwater yield" is used because it best describes how much groundwater is available for use per sub-catchment in Awoja, and how much is available in total for Awoja. This required estimating a yield that can realistically be abstracted. The term "potential groundwater yield" adequately captures the realistic rate at which groundwater can be supplied from boreholes from a large area.

*Figure 4-10: The geology of the Awoja Catchment*

The potential groundwater yield available for development per sub-catchment is indicated in *Table 4-6*. The area of each sub-catchment and the yield as a function of the area is also indicated. It was determined that due to the low permeability of the catchment four boreholes can, on average, be placed per square kilometres. The total potential groundwater available for the entire Awoja Catchment is 236MCM/yr.

*Table 4-6: Potential sustainable groundwater yield by sub-catchment in the Awoja Catchment*

| No.            | Sub-Catchment   | Potential GW Yield (MCM/yr) | Area (km <sup>2</sup> ) | Potential GW Yield (MCM/km <sup>2</sup> /yr) | Potential GW Yield (m <sup>3</sup> /km <sup>2</sup> /d) |

#### 4.2.2.1 Strategic Implications and Opportunities for Groundwater

Groundwater is often a preferred source of domestic water supply for urban and rural areas, as well as for livestock, due to the safer water quality compared to surface water. The use of boreholes for large scale irrigation is, however, not viable due to the relatively low yield of most boreholes. Small scale irrigation from groundwater sources is possible where surface water resources are not available, such as in the drier areas in the northern part of the catchment.

Weathered and fractured-bedrock aquifer systems are vulnerable to contamination from local land use practices. Increased pollution and uncontrolled abstraction associated with a growing population can also put strain on local resource supplies. It is not a regulatory requirement for town water suppliers to monitor boreholes intensively, making over-exploitation hard to control. These factors must be managed to ensure sustainable abstraction.

Groundwater utilisation requires careful planning, especially near rapidly developing urban areas. A thorough investigation of the hydro-geological environment is recommended, where the following aspects should be covered. The location of potential aquifers must be identified; the existing utilisation of specific aquifers must be determined and compared to the potential yield of the aquifers; water quality needs to be considered to assess how safe the water that can be delivered is. No new boreholes should be sunk in areas where aquifers may be over utilised.

An assessment should also be done of the various borehole pumping technologies and associated costs to determine how best to approach expansion of borehole coverage. More detailed information, captured in the national groundwater mapping survey since 2001, will be extremely useful for further groundwater planning in the catchment.

#### 4.2.3 Summary of water resources potential

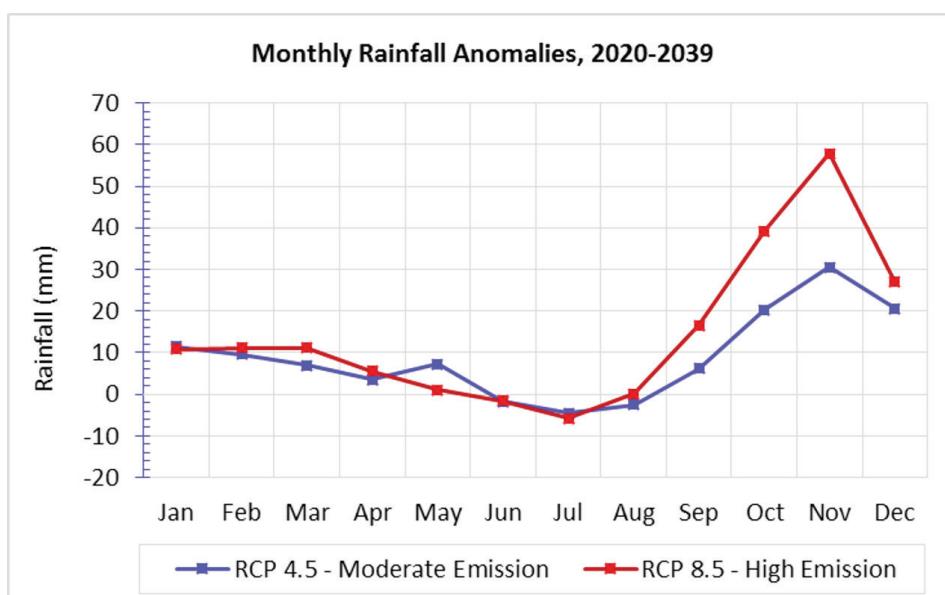

The total water resources potential is illustrated graphically in *Table 4-7*. The net cumulative runoff in each sub-catchment after consideration of wetland losses as well as the potential groundwater yield per sub-catchment are indicated.

*Table 4-7: Total water resources potential per sub-catchment*

| Sub-catchments |                 | Net Cummulative Runoff (MCM/yr) | Potential GW Yield (MCM/yr) |
|----------------|-----------------|---------------------------------|-----------------------------|
| ID             | Name            |                                 |                             |

#### 4.2.4 Impact of Climate Change

Water resources availability both in time and space continues to be impacted by climate change in Uganda, with many scientists predicting that generally, rainfall will be heavier in many parts of the world, but the periods between rains will most likely grow hotter and therefore drier. To model climate change impacts on water resources within the Awoja, two Representative Concentration Pathways (RCPs) were considered in the analysis, one moderate emissions scenario (RCP 4.5), where temperatures stabilize in the second half of the 21st century, and one high emissions scenario (RCP 8.5), where temperatures continue to increase throughout the 21st century. Rainfall anomalies for both the moderate emission (RCP 4.5) and high emission (RCP 8.5) show a slight decrease in rainfall amounts in the months June - August and a very big increment in the months September – December, figure 4-11.

*Figure 4-11: Monthly Rainfall Anomalies for the moderate and high emission scenarios*

Analysis shows a reduction in flow (from the baseline) for both the moderate and high emission scenarios of about 153 MCM/Yr and a 70 MCM/Yr respectively. The smaller reduction in the high emission scenario as compared to the moderate emission scenario is attributed to the increased magnitude of rainfall, *Figure 4-11*, in the months of September - December.

*Table 4-8: Awoja Water availability under climate change moderate emission scenario*

| Sub-catchments |                | MAP (mm) | Area (km <sup>2</sup> ) | Incremental simulated runoff (NAM) |             | Unit runoff (mm) | Cumulative simulated runoff |

A comparison between the baseline water availability and that for climate change under the two emission scenarios is shown in *Figure 5-2*, showing very high flows for the high emission scenario in the months of October–December. This may imply increase in flooding events during these months under this scenario.

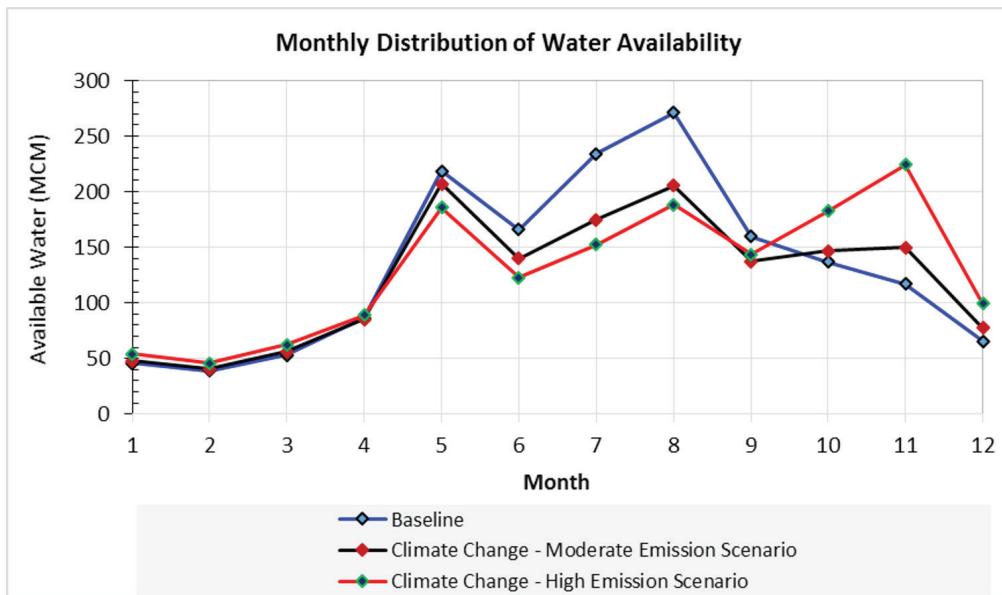

Figure 4-12: Comparison between current and climate change water availability

#### 4.2.5 Water quality

In their natural state, the quality of surface and groundwater in Uganda is generally good, however, the quality of some surface waters declined over the last 20 years primarily due to:

- Soil erosion (land degradation, deforestation, overgrazing, poor agricultural practice);
- Faecal pollution (poor sanitation);
- Fertiliser in agricultural run-off;
- Livestock pollution;
- Urban / domestic runoff and
- Poor waste management.

These are also the main sources of groundwater contamination, especially of shallow groundwater and springs, which are relied on by many poor urban and rural households.

The most important water quality issue in the Awoja sub-basin is bacterial contamination due to poor sanitation, which is indicated by coliform groups. High turbidity levels and high suspended solids have also been noted in the Awoja sub-basin. In some areas bathing is even considered dangerous due to the poor water quality.

Soil erosion brings sedimentation and siltation; silt damages water pumps, clogs filtration systems that may be in place, and reduces the lifespan of water storage dams at a rate that can make construction uneconomic. Wetlands are recognised as powerful natural filters for water of poor quality. Excessive silt captured in wetlands will, however, lead to a gradual change in their capacity to manage floodwaters, leading to the prospect of more destructive floods. All these factors reduce the water quality in Awoja.

#### 4.2.6 Infrastructure

Water resource infrastructure development is quite low in the Awoja Catchment with the existing limited to local supply systems only including:

- Many small schemes that provide water supply (including some water treatment works) within towns and larger villages (gravity fed and groundwater)
- Numerous wells and boreholes
- Many protected springs
- Some valley dams and valley tanks are still in existence but these are few, far from each other and functionality of many has been lost due to siltation or flood damage

- The Arechek Dam in Napak at 2.5 million m<sup>3</sup>, completed in 2012, falls outside the Awoja Catchment. Arechek Dam is larger than any built infrastructure within Awoja. Arechek is, by international definition, still a “small dam”.

In Awoja there is none of the following water resource infrastructure:

- No dams of any significant size
- No noteworthy irrigation schemes - small scale irrigation only
- No hydropower plants.

Additionally:

- Sanitation along with other basic services within the catchment is poor
- Road infrastructure is very poor with only two major arteries (Mbale-Nakapiripirit and Mbale-Soroti, the first is in very poor condition. The Mbale-Soroti link is currently being rebuilt. The construction of the bridge across the Awoja River close to Soroti has been completed. Access to many most locations is difficult especially during the rainy season, which affects transport
- Old rail links are defunct
- Soroti has an airfield boasting of having the third longest runway in Uganda (long enough for a Boeing 737)
- Electricity has been provided along the major arteries and to district centres. It is however estimated that 97% of the population do not have access to power.

The current set of District Development Plans (2010-2015) makes no provision for any major water resource infrastructure.

#### **4.2.7 Risk of floods and droughts**

##### **4.2.7.1 Overview**

Droughts, floods, landslides and mudslides are a particular concern to the people residing in the Awoja Catchment. These events often lead to loss of human life, animals, and crops. In Uganda, the Department of Disaster Management and Refugees is responsible for creating awareness, ensuring protection, and planning mitigation measures for floods and landslides. A flood management strategy was developed. Droughts, floods, and landslides are a consequence of natural climatic variations in the Awoja Catchment, although this is now being exacerbated by climate change. Land degradation and deforestation play a large role in the onset of flood events and may also contribute to droughts as soils lose their capacity to store water for later release, either to streams or as evapotranspiration. Effective flood management can also make a contribution to reduce risks of water-borne diseases that can increase significantly during flood periods.

##### **4.2.7.2 Floods, landslides and mudslides**

Floods frequently occur in low-lying areas, in areas along river banks, close to wetlands and along lakes (NELSAP, 2012). Awoja's large wetland areas, some of the severely degraded riverbanks, the catchment topography and degraded soils all promote flooding.

Unstable soils along the steep mountain slopes lead to landslides and mudslides. During strong rains erosion gullies are often formed, promoting landslide and mudslide events. The Mount Elgon region is especially prone to landslides and mudslides. The steep mountain slopes in this region have become degraded due to high population pressure and uncontrolled land use practices on the mountain slopes. Deep-rooted trees contribute to stabilising the soil and preventing landslides, but deforestation is affecting this natural process.

In the last two decades, there were at least 14 major flood events, affecting an average of about 68,000 people (World Bank, 2011). However, the areas within Awoja that were the most affected by the floods and were recorded include: Sironko, Bulambuli, Kapchorwa, Kween, Kumi, Bukedea, Serere, and Soroti.

##### **4.2.7.3 Droughts**

Droughts are a feature of the highly seasonal rainfall. Uganda is already subject to significant climate variability, particularly in the large drought and flood-prone regions around Mount Elgon and in wetlands. The impacts of

hydrologic extremes will be exacerbated with continued watershed degradation, wetland loss, population growth, and paradoxically economic growth as higher-value assets are impacted. The capacity to cope with existing climate risks is poor. Climate change is expected to further alter hydrology and water demands, threatening the resource base necessary to provide desired water services and pointing to the need for additional adaptation (World Bank, 2011).

The most drought-prone areas in the Awoja Catchment are within the cattle corridor, particularly in the Karamoja region in the north of the Awoja Catchment (NELSAP, 2012). Drought related disasters in Uganda are related to La Niña. Over the past 10 years alone, droughts have increased in frequency by 50% in Uganda leading to a noted reduction in the quantity of water available in certain drier areas (NELSAP, 2012). In the recent past, droughts have led to chronic food shortages and widespread livestock deaths in certain areas of the country. Severe droughts were recorded in 1993 - 1994, 1998, 1999, 2002, and 2005, each affecting approximately 655,000 people on average (World Bank, 2011). Food security issues continue to affect the north and northeast parts of the Awoja Catchment because these areas have low average annual rainfall that is highly variable from year to year. Drought impacts were exacerbated by the poor condition of water infrastructure (small ponds, tanks, and reservoirs) and the lack of technology to access groundwater drought reserves especially in these areas. The districts within the Awoja Catchment that are most frequently affected by droughts include: Nakapiripirit, Amudat, and Napak. In the far northern parts of Nakapiripirit (the Ukutat sub-catchment) water shortages were found to last up to 18 months at a time.

An increased intensity and frequency of floods and droughts may, like other natural disasters, often lead to several negative consequences, such as:

- Increased pollution of drinking water resources during floods;
- Increased outbreaks of water borne diseases from floods;
- Increased risk of malaria due to increasing temperatures;
- Increased water shortages in dry rural areas where populations depend on shallow streams, swamps and springs which dry up during droughts;
- Increased vulnerability of crops due to both floods and droughts and
- Increased vulnerability of food security, as the population increases and crops are susceptible to floods and droughts.

Mitigation measures for flood and drought management include: planting more trees and grass in degraded areas, promoting appropriate land use practices, the resettlement of people living inappropriately on mountain slopes and flood plains, rehabilitation of degraded rivers banks, wetland restoration and the development of large water retaining infrastructure, such as dams to allow for better flood and drought control.

## 4.3 Water Demand

### 4.3.1 Overview

The Awoja Catchment has seen little development of its water resources. The main water use sectors in the Awoja Catchment include water for domestic use, livestock watering, rainfed agriculture, and aquaculture. There are only a few small scale irrigation schemes, but their impact on water resources in 2013 was assumed to be negligible as no information on scheme capacities is available. The use of water for hydropower generation was anticipated for a number of years, but as yet, no small-scale hydropower schemes were established. Previous assessments were focused on domestic water use and little was done to define the levels of development for the other water use sectors. This section of the report presents the estimated (current and projected) water demand within the Awoja Catchment for the various water users and for each sub-catchment.

### 4.3.2 Existing water demands

#### 4.3.2.1 Domestic water use

The population of the Awoja Catchment is growing at a very high rate. Despite the fact that the domestic water demand can probably be catered for through groundwater development up until 2040, there will be significant challenges to food security if the population continues to grow at the historic growth rate and food production trends are not improved. The physical infrastructure related to water supply for domestic use in the catchment is

not well developed and the institutions in the area still need to build capacity to effectively provide the required services.

Drinking water sources include: protected springs, groundwater from shallow wells or deep boreholes, harvested rainwater, and surface water (rivers and lakes). Water is abstracted and supplied in various ways, including: (1) through water supply systems with hand pumps; (2) through submersible motorised pumps that convey water through piped systems to elevated storage tanks from where the water is gravitated to yard taps or kiosks; (3) through gravity flow schemes incorporating concrete de-pressure tanks and piped networks that deliver surface water and spring water to users via a public fountain; and (4) through large scale piped water supply systems that incorporate water purification plants.

Currently, groundwater is primarily used for domestic purposes because it is of a relatively high quality and requires minimal treatment. Systems are smaller scale and less complex and can be easily operated and managed (World Bank, 2011).

The abstraction of either groundwater or surface water is subject to permission from the DWRM. According to NELSAP (2012) the rural water infrastructure inventory in the Awoja Catchment in 2011 comprised the following:

- 15 dams;
- 1,047 deep boreholes;
- 15 kiosks;
- 1,016 protected springs;
- 623 public standing posts;
- 144 rainwater harvesting tanks;
- 456 shallow wells;
- 2 valley tanks;
- 130 yard taps for public use and
- 1 large scale piped water supply system with a water purification plant in Soroti.

A review of current District Development Plans reflects a number of water resource measures currently being planned or in process:

- Every District has an active borehole rehabilitation and development scheme
- Some valley dams and tanks are being de-silted
- Piped water schemes are being installed
- Tree planting/reforestation programmes were initiated
- There are some catchment rehabilitation projects in place. These can be categorised as 'sustainable land management' or 'source protection' projects and include activities such as riverbank erosion control, tree planting and contouring. These activities have here been grouped under the heading of Sustainable land management – with Sustainable land management
- Rainwater harvesting projects are being initiated
- Every District reports its engagement in sensitisation and awareness raising
- Water quality monitoring is addressed (although at very low level)
- The Department of Agriculture is seeking to improve agricultural production through improvements to crops, stock and farming methods (NAADS Programme).

The coverage target for rural domestic water supply is 77% by 2015, increasing to 100% by 2035. The coverage target for urban water supply is 100% by 2015. Thereafter, investments should continue to cover population increases and replacement of existing infrastructure that outlives its lifespan (NELSAP, 2012). The target for the functionality of supply facilities is 95% by 2015 (JICA, 2011). Districts that have safe coverage below the 2011 national average of 65% and functionality below the national average of 80% are shaded in grey in *Table 4-8: Safe water coverage in the Awoja Catchment as in 2011*.

*Table 4-10: Safe water coverage in the Awoja Catchment as in 2011*

| District      | Safe water coverage in 2011 (%) | Functionality (%) |
|---------------|---------------------------------|-------------------|
| Amudat        | 23                              | 83                |
| Bukedea       | 67                              | 89                |
| Bukwo         | 68                              | 94                |
| Bulambuli     | 79                              | 82                |
| Kapchorwa     | 78                              | 97                |
| Katakwi       | 85                              | 93                |
| Kumi          | 59                              | 89                |
| Kween         | 41                              | 78                |
| Nakapiripirit | 51                              | 85                |
| Napak         | 49                              | 77                |
| Ngora         | 66                              | 93                |
| Serere        | Not available                   | Not available     |
| Sironko       | 70                              | 85                |
| Soroti        | 75                              | 84                |

\* Grey shading indicates safe coverage below national averages

Improvements to sanitation and hygiene conditions leads to a reduction in water and hygiene related diseases and contribute to a better health standard in the population – which is essential in reducing poverty and advancing the quality of life. The coverage target for rural sanitation is 77% by 2015, increasing to 100% by 2035. The coverage target for urban sanitation is 100% by 2015 (JICA, 2011).

Latrine coverage and hand washing practices, both of which contribute significantly to hygiene, are not widespread. The ranges for latrine coverage and for the practice of hand washing are indicated by district, as determined in 2011 by JICA, in *Table 4-11*.

*Table 4-11: Sanitation coverage in the Awoja Catchment in 2011*

| District      | Latrine coverage range in 2011 (%) | Hand washing practice range (%) |
|---------------|------------------------------------|---------------------------------|
| Amudat        | 2 - 20                             | No data                         |
| Bukedea       | 61 - 77                            | 11 - 20                         |
| Bukwo         | 78 - 97                            | 11 - 20                         |
| Bulambuli     | 61 - 77                            | No data                         |
| Kapchorwa     | 61 - 77                            | 1 - 10                          |
| Katakwi       | 41 - 60                            | 11 - 20                         |
| Kumi          | 41 - 60                            | 21 - 30                         |
| Kween         | 41 - 60                            | 1 - 10                          |
| Nakapiripirit | 2 - 20                             | No data                         |
| Napak         | 2 - 20                             | No data                         |
| Ngora         | 61 - 77                            | No data                         |
| Sironko       | 61 - 77                            | 11 - 20                         |
| Soroti        | 61 - 77                            | 11 - 20                         |
| Serere        | 61 - 77                            | 1 - 10                          |

Poor sanitation impacts negatively on the water quality of both groundwater and surface water, affecting the health of the water users. In urban areas, centralised sewerage systems improve sanitation and hygiene. The NWSC controls sewerage system coverage in urban areas and must focus on increasing coverage drastically. Currently, the only urban sewerage system is in the town of Soroti, on the edge of the Awoja Catchment. This system has

a treatment capacity of 3,000m<sup>3</sup>/day, but the collection network coverage is currently only 4%, utilising only 8% of this capacity. People that are not connected to the network still make use of pit latrines or have no sanitation facilities at all.

Sludge management in urban areas is also still very poorly handled and waste landfill knowledge needs to be increased. A challenge for sanitation and hygiene is that the communities do not view these health services as essential to survival, in the way that they view water supply, due to the indirect outcomes of poor sanitation and hygiene. Creating awareness on the importance of hygiene is an essential step in improving the current situation.

#### 4.3.2.2 Livestock watering

Livestock consists of cattle, sheep, goats, pigs, chickens, ducks, and turkeys. The water use for these animals as well as required land area to carry them was determined by converting the populations of the various animals to equivalent Tropical Livestock Units (TLU) using representative conversion factors. One TLU represents an equivalent animal live weight of 250kg. According to PEM consult, 2009, the water demand per TLU is 50L/TLU/day. Livestock numbers as indicated in the National Livestock Census (2008) are shown in *Table 4-10: Livestock numbers estimated in 2008 for districts falling wholly or partially within the Awoja Catchment*. Little is known about livestock watering infrastructure in the catchment. As livestock is critical to livelihoods it is important that a comprehensive audit to support planning for improvements is carried out.

*Table 4-12: Livestock numbers estimated in 2008 for districts falling wholly or partially within the Awoja Catchment*

| District delineation 2006<br>(numbers for 2008) | Cattle<br>(no.) | Goats<br>(no.) | Sheep<br>(no.) | Pigs<br>(no.) | Poultry<br>(chicken,<br>ducks,<br>turkey)<br>(no.) | Total<br>Livestock<br>(no.) | Total<br>Tropical<br>Livestock<br>Units 2008 |
|---|-----------------|----------------|----------------|---------------|--|-----------------------------|--|
| Bukedea   | 86,141          | 54,810         | 10,013         | 23,264        | 225,247  | 399,475                     | 80,453                                       |
| Bukwo   | 23,360          | 23,312         | 2,137          | 1,657         | 96,880   | 147,346                     | 21,316                                       |
| Kapchorwa (incl. Kween)                         | 95,564          | 75,073         | 9,852          | 8,070         | 288,868  | 477,427                     | 84,305                                       |
| Katakwi (excl. Amuria)                          | 136,966         | 104,932        | 25,511         | 19,381        | 294,554  | 581,344                     | 124,667                                      |
| Kumi (incl. Ngara)                              | 220,055         | 168,887        | 30,994         | 67,650        | 579,431  | 1,067,017                   | 213,977                                      |
| Moroto (incl. Napak)                            | 352,867         | 380,172        | 307,028        | 5,534         | 282,906  | 1,328,507                   | 353,715                                      |
| Nakapiripirit (incl. Amudat)                    | 674,746         | 547,365        | 389,676        | 322           | 331,056  | 1,943,165                   | 614,662                                      |
| Sironko (incl. Bulambuli)                       | 92,562          | 79,141         | 9,806          | 32,733        | 419,390  | 633,632                     | 93,325                                       |
| Soroti (incl. Serere)                           | 271,634         | 236,839        | 53,010         | 75,499        | 851,877  | 1,488,859                   | 268,080                                      |

According to the National Livestock Productivity Improvement Project (2002), the rangeland carrying capacity for Uganda has never been determined with certainty, but is estimated to range from 0.7ha/TLU for high rainfall areas to 2.7ha/TLU for dry areas. The carrying capacity within the Awoja Catchment was, therefore, assumed to be 0.7ha/TLU for dry areas with a MAP of 745–1,000mm; 1.7ha/TLU for areas with a MAP of 1,000–1,500mm and 2.7ha/TLU for areas with a MAP above 1,500mm. A proper livestock carrying capacity assessment is advised to guide stocking densities and grazing management as a catchment intervention.

Based on the above carrying capacities it was found that the majority of the districts within Awoja were either overstocked in terms of livestock or at full capacity in 2008. The only two districts with room for growth in livestock numbers were Bukwa and Kapchorwa. As more recent livestock figures are not available, it is not clear whether livestock has increased or decreased since 2008. It has, however, been suggested by DWRM that there have, in fact, been substantial losses in livestock in the catchment, leading those living in the catchment to request government assistance for re-stocking. According to the UBOS statistical abstract 2012, the CIS household register indicates that between 2008 and 2011 Kumi district had the highest proportion of households owning cattle in Uganda (56.3 percent) and Ngara district had the highest proportion of households owning goats (56.4 percent) in Uganda.

The carrying capacity of the respective areas should be used to determine stocking. Emphasis is placed on the improvement of livestock rearing practices and on the mix of animals making up the total livestock component. The

consumption and reproduction rate of livestock need to be carefully monitored and balanced as the population grows. Livestock water demands are summarised in *Table 4-11: Summary of current and future water demands for the Awoja catchment*.

#### 4.3.2.3 Rainfed agriculture

Agriculture in the Awoja Catchment is mainly dependent on rain and information regarding area under rainfed agriculture for 2002 was extracted from sources provided by the MWE, informed by the Food and Agriculture Organisation (FAO). These values were projected to 2013 based on population growth statistics. Certain parts of the Awoja catchment are already highly cultivated. The Mount Elgon region specifically has almost reached its capacity for rainfed cultivation. Because of rainfall variability and inconsistent rains, crops are often planted in areas on river banks and on extremely steep mountain slopes. This results in river bank and mountain slope destabilisation. Destabilised river banks are susceptible to erosion and wash-aways during floods. On mountain slopes the runoff is increased and weakened soils are carried downstream, causing siltation downstream. As the mountain slope stability decreases the likelihood of landslides and mudslides increases.

With population increase, additional agricultural produce will be required from the land. Ideally, the additional food supply should come from increasing the crop yields within the existing rainfed fields. Since this is not being realised, the other alternative is to increase the cultivated area. It was assumed that wetlands, game reserves, forest reserves and national parks would not be used for rainfed cultivation. In intensively cultivated districts, the maximum area available for cultivation was capped at 85% of the available land, to allow for urban expansion, transport networks, houses and for areas that might be otherwise unsuitable (steep slopes, rock outcrops, inappropriate soils etc.).

An estimate of the required land for rainfed cultivation in 2040 was done based on the assumption that cultivation practices must improve because of the land constraints and population growth. If commercial irrigation schemes are not implemented the land required for rainfed agriculture will increase in parallel with the population. This reflects a 2040 scenario upon which other development scenarios are evaluated against. Rainfed areas for 2002 were used as a departure point. A limit for rainfed agriculture was set as 85% of the inhabitable area. This allows 15% for human settlement, unsuitable land and infrastructure development.

By projecting the 2002 rainfed area to 2013 using the same growth rate as for the population, it was found that both Bulambuli and Sironko districts are currently (2013) over-cultivated. In these districts, additional food supply would have to be imported or come from increasing the crop yields from the rainfed fields. If no steps are taken to improve the yield from the current rainfed area, it is expected that all the districts of Awoja will have reached their maximum potential for rainfed agriculture by 2040. Small-scale supplemental irrigation of rainfed crops, including widespread use of conservation farming practices will greatly increase water use in agriculture in the future.

There are no major irrigation schemes in the Awoja Catchment. Existing small scale irrigation schemes are located on the foothills of Mount Elgon and they include; the Atari scheme, the Tabagonyi scheme, the Bunamono scheme, and the Nabongo scheme. Some informal irrigation along the rivers and on the wetlands' margins (during the dry seasons) was noticed during field visits. Examples include a students' group garden next to the River Namalu in Nakapiripirit district, irrigation of cotton fields and vegetable gardens along the Sipi River and millet, sorghum, lentils and vegetables next to Simu River in Bulambuli district. Some of the irrigation was literally on the edge of the river. Rudimentary techniques of irrigating and controlling water are applied. People with farms and gardens along the rivers use pipes and pressure pumps to irrigate their farms and gardens.

#### 4.3.2.4 Aquaculture

Fishing is currently practiced to a greater extent than aquaculture, but there is room for growth of properly managed aquaculture. To determine the existing fish pond area and fish production rates of the districts within the Awoja Catchment, the 2006 fisheries information presented in the Strategic Sector Investment Model for the Uganda Water Sector, (PEMconsult, 2009) was used. The number of ponds, total pond area and production of various fish species was determined per 2010 district (district delineation in 2010), using a basic conversion from the 2006 district delineations, where it was assumed that the ponds are evenly distributed across the district. The water requirement for aquaculture in 2013, including water losses through seepage and evaporation is approximately

1.49million m<sup>3</sup>/yr. The location of the fish ponds in the 2002 district delineations and the functionality of the ponds could not be established and as such aquaculture water use estimates should be used with reservations.

#### 4.3.2.5 Rural Industries

The water demand for rural industries is currently negligible in relation to the other demand sectors. This can be expected to increase along with the development of agricultural industries and food processing close to production areas as well as due to growth in tourism. It is assumed that water demand for rural industries will require 1% of the demand required for livestock, crops, and fisheries in 2013, increasing to 3% of the demand required in 2040. The demands are expected to be of a small order and have a minimal impact on the water balance. As there is little data available for the existing rural industries in the Awoja Catchment and the rate at which they have grown in the past it is difficult to accurately project growth trends for this sector. The impact of these demands will be negligible in relation to the other demands in each sub-catchment. It is suggested that the growth of this sector be monitored and that water consumption is recorded in order to refine the 2040 estimates in future.

#### 4.3.2.6 Water demand summary

The key water use sectors considered in the Awoja Catchment include:

- 1) Domestic water use,
- 2) Agricultural water use,
- 3) Livestock water use,
- 4) Aquaculture/fisheries use,
- 5) Rural industries, and
- 6) Environmental flows.

The total demands for the various water use sectors in the Awoja Catchment are indicated at five year increments in *Table 4-11: Summary of current and future water demands for the Awoja catchment*. Environmental flows are assumed to be 15% of the natural streamflows in the sub-catchment. This is chosen as an illustrative measure for the preservation of river health and biodiversity that only become critical with high development. A figure of 5-10% for environmental flows will not materially affect the available water availability for development.

*Table 4-13: Summary of current and future water demands for the Awoja catchment*

| Total water demands in Awoja (MCM/yr) |          |           |         |              |                |                                     |       |
|---------------------------------------|----------|-----------|---------|--------------|----------------|-------------------------------------|-------|
| Year                                  | Domestic | Livestock | Rainfed | Aqua-culture | Rural Industry | Environmental Flows (15% of runoff) | Total |
| 2013                                  | 10.55    | 14.74     | 23.89   | 1.49         | 0.49           | 185                                 | 236   |
| 2018                                  | 14.93    | 14.74     | 25.32   | 1.99         | 0.67           | 185                                 | 243   |
| 2023                                  | 20.89    | 14.74     | 26.83   | 2.48         | 0.94           | 185                                 | 251   |
| 2028                                  | 28.97    | 14.74     | 28.44   | 2.98         | 1.33           | 185                                 | 261   |
| 2033                                  | 39.91    | 14.74     | 30.14   | 3.48         | 1.91           | 185                                 | 275   |
| 2035                                  | 45.3     | 14.74     | 30.85   | 3.98         | 2.22           | 185                                 | 282   |
| 2040                                  | 57.05    | 14.74     | 32.7    | 4.24         | 3.13           | 185                                 | 297   |

It should be noted that the aquaculture demand indicated is non-consumptive. The distribution of the total demands by sub-catchment for 2013 is given in *Table 4-12: Water demands by sub-catchment for 2013* and in *Table 4-13: Water demands by sub-catchment for 2040* for 2040. Aquaculture and rural industry demands are not indicated as the demands per sub-catchment have not been specifically determined due to insufficient information regarding the location of fish ponds and rural industries.

Table 4-14: Water demands by sub-catchment for 2013

|    | Sub-catchment   | Total Area (km <sup>2</sup> ) | EWR at 15% of runoff MCM/yr | Domestic demand MCM/yr | Livestock MCM/yr | Rainfed average annual demand MCM/yr | Total Demand MCM/yr | Demand per km <sup>2</sup> MCM/yr/km <sup>2</sup> |
|----|-----------------|-------------------------------|-----------------------------|------------------------|------------------|--------------------------------------|---------------------|---|
| 1  | Ukutat          | 1,053                         | 2.40                        | 0.5                    | 2.4              | 0.3                                  | 5.6                 | 0.01  |

In 2013 and in 2040 the highest water demand as a function of the sub-catchment area is being and will be experienced in the Opeta-Bisina sub-catchments and in the Lake Kochobo sub-catchment, followed by the sub-catchments around Mount Elgon (Sironko, Muyembe, Sipi and Simu-Sisi).

#### **4.4 Water Balance**

The water balance for Awoja was done for two periods:

1. The water balance for the current (2013) situation with negligible large infrastructure development as it currently stands
2. The water balance for a future (2040) baseline scenario where no noteworthy investment in additional water infrastructure or water related management programmes has taken place.

By determining the expected water balance for 2040 (the end of the planning horizon) it is possible to determine which areas will have a surplus of water and which areas will have a water deficit in future. A water surplus would suggest opportunities for increased productive water use. A water deficit would suggest that the water development plan will need to include measures to improve water use efficiency and possibly measures to manage increases in water demand or use over time. Deficits and surpluses are likely to vary spatially within the catchment.

These assessments were intended first, to weigh the potential water resources (both surface water and groundwater) against the estimated water demands in the Awoja Catchment in order to determine if the demands can be met currently and in 2040 without investment in infrastructure, productivity improvement programmes or land management programmes. Where a water surplus is evident from the assessment, an opportunity for increased productive water use is indicated. Secondly, in the event that demands are not being met or cannot be met in future, these assessments identify the sub-catchments that require measures to improve water use efficiency and to manage water deficits. Thirdly, when compared with each other these assessments serve as indicators of change in water demands and the water balance over time. Water deficits and surpluses are likely to vary spatially within the Awoja Catchment.

Mike Basin was used to model the water resources potential as well as the major demands for both water balance assessments. Environmental flows, equivalent to 15% of the stream flow in each sub-catchment were taken into consideration as a starting point. The impact of other environmental flow percentages was considered in other development scenarios.

An initial water balance assessment comparing the average net cumulative runoff per sub-catchment (the available surface water) with the estimated demands for 2013 and 2040 is shown in *Table 4-14: Water Balance Assessment* with average annual potential and demands. If average annual runoffs are considered it is found that the domestic demand, livestock demand and rainfed agriculture demand can be met using only the surface water in both 2013 and 2040. The potential groundwater yield is also indicated in *Table 4-14: Water Balance Assessment* with average annual potential and demands as the development of groundwater to cater for domestic demands is preferred due to the better standard of groundwater quality. Surface water generally requires treatment before consumption is regarded to be safe. From the table it can be deduced that if developed, the potential groundwater yield would be able to serve the domestic demand. As mentioned previously, the extent of groundwater development per sub-catchment is not currently known. A topographical survey marking existing groundwater infrastructure would be useful during future planning of development, so as to enable a calculation of how much groundwater is currently developed in each sub-catchment and how much more is required at a certain future date.

As droughts are of particular concern in the Awoja Catchment it is suggested that development plans should rather be based on water balance estimates in the driest year than in an average year. The assessment was repeated for the driest year recorded between 1961 and 1978, as hydrological records in this period were the most complete. A water balance for 2013 and 2040 in the driest year in the mentioned period is shown in *Table 4-15: Water Balance Assessment* in the driest year analysed. From the table it is evident that if abstractions are attempted as estimated in all the sub-catchments then certain sub-catchments will have water deficits in very dry years.

*Table 4-16: Water Balance Assessment with average annual potential and demands*

| 2013             |                | 2040             |                 |

The sub-catchments that are expected to experience water deficits in a dry year are indicated in Table 4-16: Sub-catchments that are expected to experience water deficits in a dry year.

**Table 4-18: Sub-catchments that are expected to experience water deficits in a dry year**

| 2013             |                | 2040             |                 |

|                  |                | 4                | Taboki          |
|                  |                | 10               | Lake Okolitorom |
|                  |                | 11               | Opeta-Bisina    |
|                  |                | 14               | Mt. Napak       |

By 2040, the only sub-catchments that will not experience water deficits in a dry year are those on the slopes of Mount Elgon.

Climate change related trend in rainfall could not easily be detected but local rainfall seasonality and elevation (lower temperatures) may impose limitations on crop portfolios and their vulnerability. There is a potential for increase in the frequency of extreme events as hydrological cycles intensify in a warming atmosphere. The impact may be very similar over a small area such as Awoja Catchment and the vulnerable catchments are deemed to be the same with climate change effects.

## 4.5 Social and Environmental State

This social and environmental analysis provides the situational assessment from a wealth of information, which informs and/or influences the interventions for catchment management. The key vulnerabilities in the catchment mainly originating from social-economic activities coupled with the growing population are identified, and linkages, cumulative impacts and options for mitigation are assessed and presented in this section of the report.

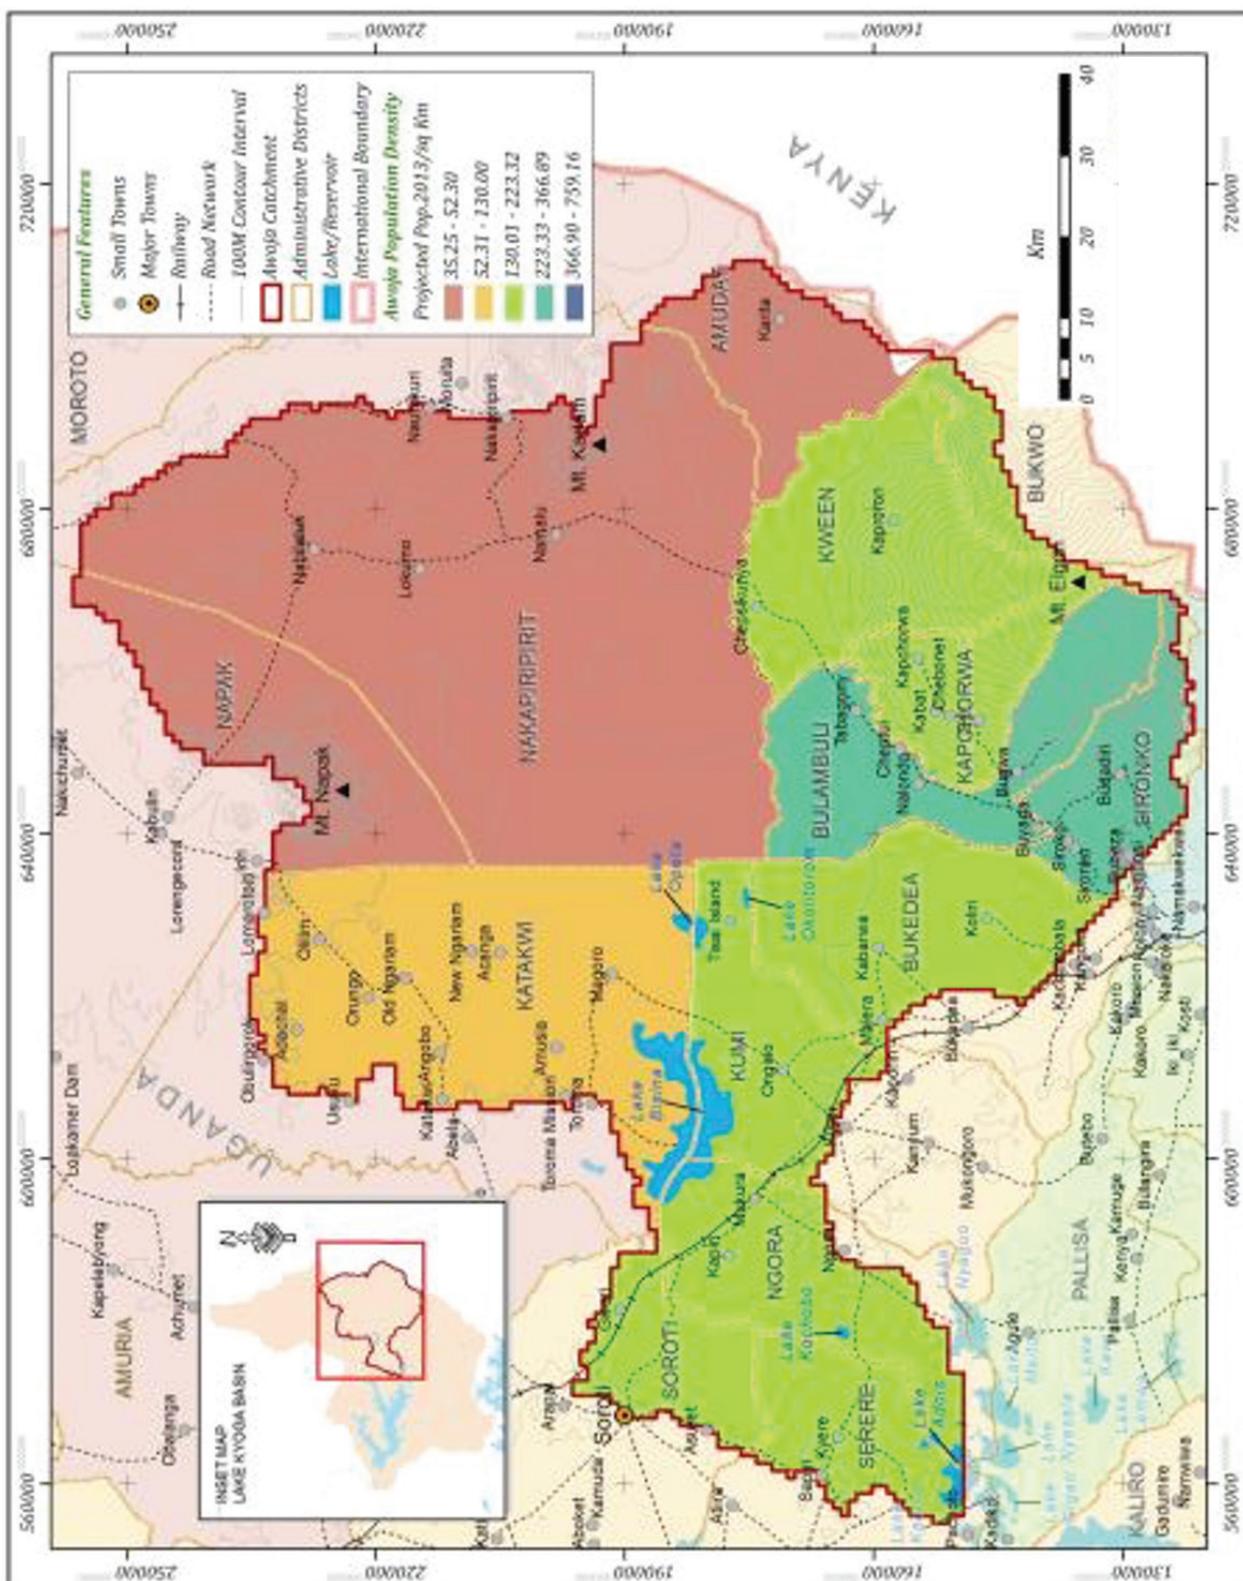

### 4.5.1 Demography

The 2013 population for the Awoja Catchment is estimated at 1,438,908 people<sup>4</sup>, with population densities indicated in *Figure 4-11*.

---

<sup>4</sup> Population growth trends were updated, as the previous population census was conducted in 2002. Applying the historical growth trends between 1991 and 2002, per district, the current 2013 population and the future population up until 2040 were projected. As the census was conducted according to earlier district delineations and as the hydrological catchment boundary of the Awoja catchment does not follow district boundaries, pre-processing of the population information was done to determine the population for the newer district delineations, for the portion of districts falling within the Awoja catchment and for the sub-catchments. Certain areas deemed to be uninhabitable (or at least have very low populations) such as game reserves, national parks, forest reserves, lakes and wetlands were excluded during the process of transferring old district population to new district delineations and sub-catchments. The process employed is discussed in detail in the Water Balance report.

For the purpose of this study, urban areas were defined as in the 2002 Census as: "...gazetted cities, municipalities and town councils as per the Local Government Act 2000..." To transfer the source information to the newer district delineations the urban population figures for town councils, municipalities and cities from 2002 were matched to the new districts in which they fall.

*Figure 4-13: Population density in Awoja catchment*

The Lake Kyoga Basin has an average population density of 134 inhabitants per a square kilometre (inhabitants/km<sup>2</sup>) ranging from 50 to 250 inhabitants/km<sup>2</sup> in several districts. The south-eastern part of the region is densely populated with the slopes of Mount Elgon (parts of Kween, Kapchorwa, Bulambuli, and Sironko) being overpopulated, the inhabitants benefiting from rich volcanic soils, but living on small plots of land, mainly as subsistence farmers. This pattern increases the risks of erosion, landslides, and food shortages. In contrast to this, the cattle corridor is generally a sparsely populated area. This region includes the Karamoja (Nakapiripirit, Napak, and Amudat), which is inhabited by nomadic pastoralists and characterised by difficult environmental and economic conditions as well as a history of insecurity.

The average annual historic growth rates for the population, calculated between 1991 and 2002 are shown in *Table 4-17: Historical population growth rates by District*. Katakwi, Amudat, Nakapiripirit, and Napak districts have the highest growth rates.

*Table 4-19: Historical population growth rates by District*

| District  | Population growth rate (%) | District      | Population growth rate (%) |
|-----------|----------------------------|---------------|----------------------------|
| Amudat    | 5.9%                       | Kween         | 4.2%                       |
| Bukedea   | 4.3%                       | Nakapiripirit | 5.9%                       |
| Bukwa     | 4.2%                       | Napak         | 5.8%                       |
| Bulambuli | 2.5%                       | Ngara         | 4.3%                       |
| Kapchorwa | 4.2%                       | Serere        | 5.1%                       |
| Katakwi   | 6.2%                       | Sironko       | 2.5%                       |
| Kumi      | 4.3%                       | Soroti        | 5.1%                       |

By 2040 the population is expected to triple, reaching a total of 4,790,044 people. The current population is almost entirely rural (over 90 %) with Soroti being the only district with a large urban town. The rural population lives in dispersed villages characterised by traditional building structures often made of mud and/or grass roofing with dust floors. There is no vision for the development of large urban growth nodes, although the population of towns may increase disproportionately as rural resources become more thinly stretched. The estimated population within the Awoja Catchment is shown at five-year intervals in *Table 4-18: Estimated current and future population of Awoja*.

*Table 4-20: Estimated current and future population of Awoja*

| Year | Rural population | Urban population | Total population |
|------|------------------|------------------|------------------|
| 2013 | 1,362,377        | 76,531           | 1,438,908        |
| 2018 | 1,688,349        | 95,504           | 1,783,853        |
| 2023 | 2,099,997        | 119,509          | 2,219,506        |
| 2028 | 2,621,490        | 149,940          | 2,771,430        |
| 2033 | 3,284,178        | 188,594          | 3,472,772        |
| 2035 | 3,597,537        | 206,855          | 3,804,392        |
| 2040 | 4,528,997        | 261,048          | 4,790,044        |

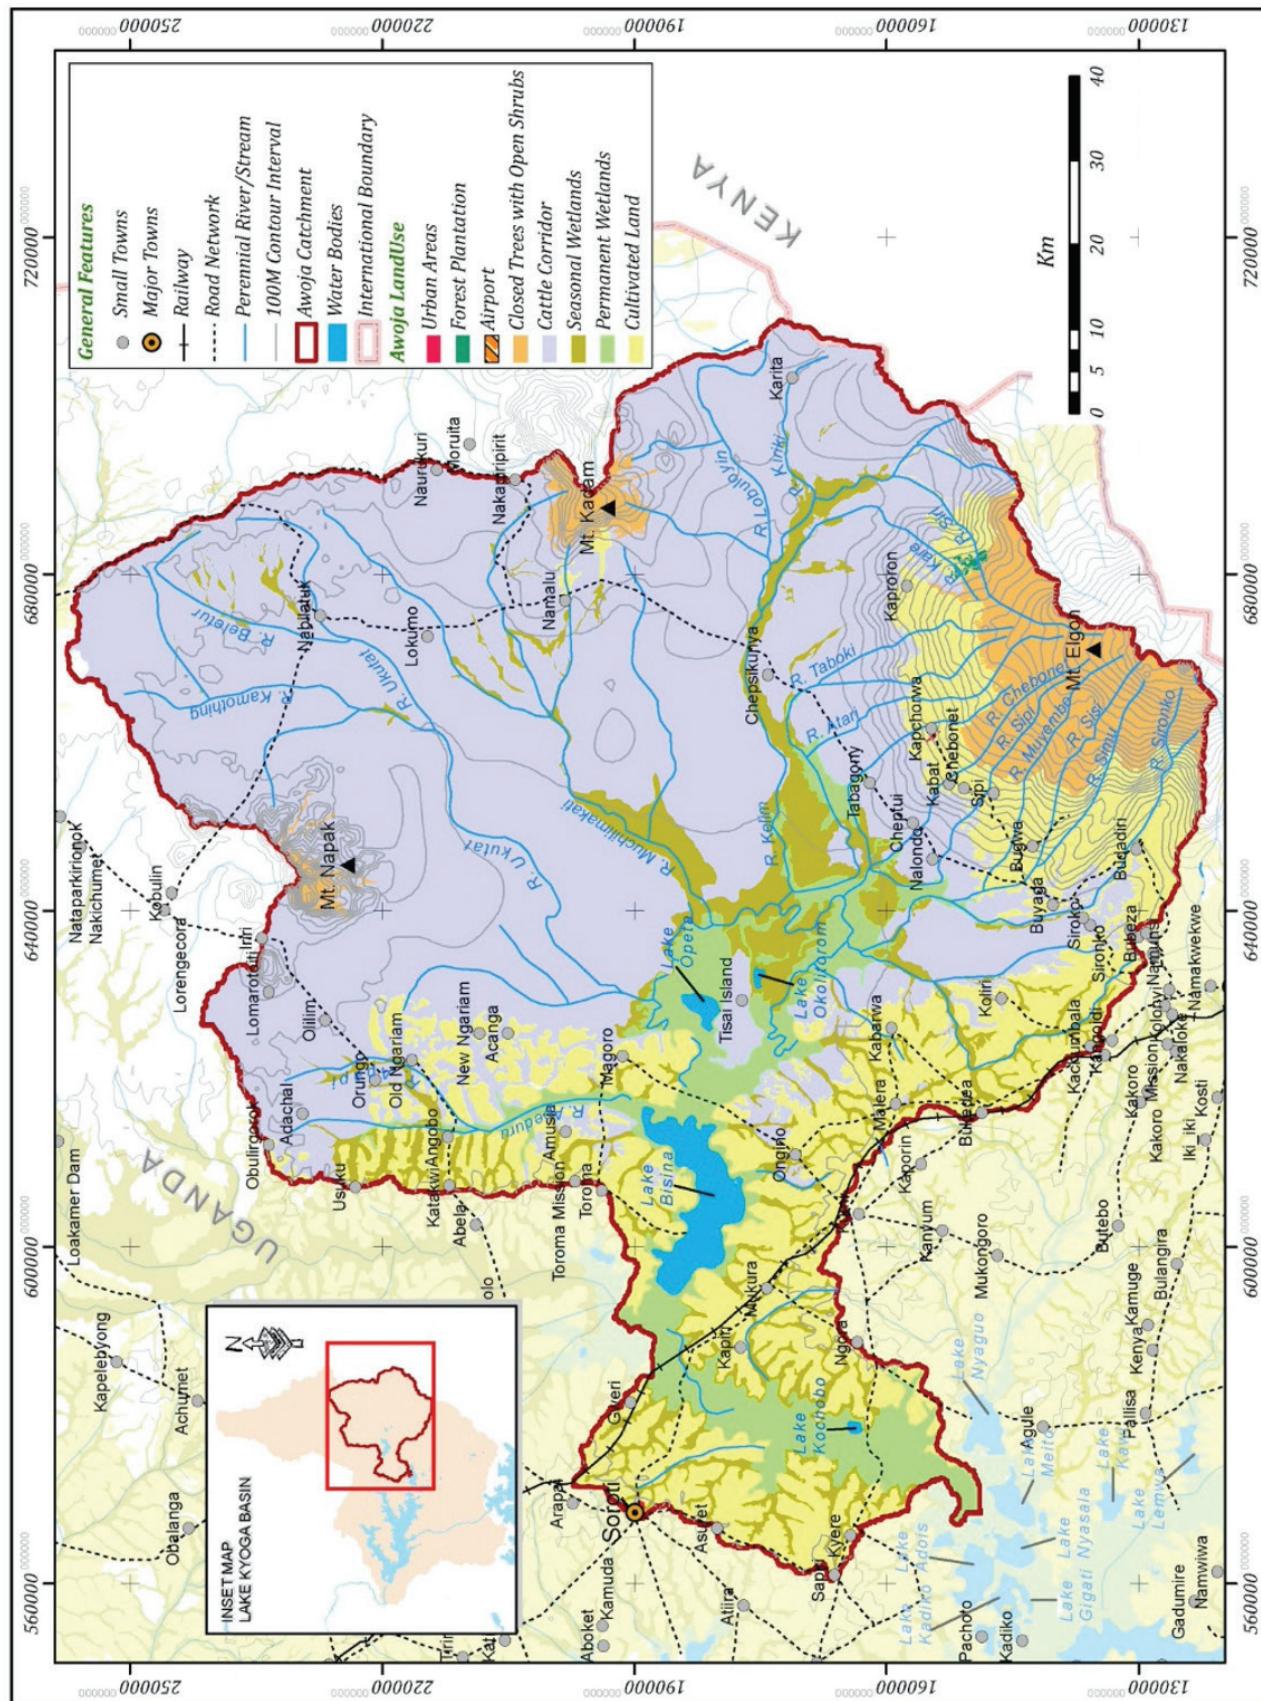

#### 4.5.2 Economic activities

As already mentioned in the section above, the population of Awoja is almost entirely rural, with district populations between 82% and 99% depending on agriculture for their livelihoods. No major towns are located within the Awoja Catchment<sup>5</sup>. Livelihoods are, therefore, almost exclusively based on the natural resources of the catchment, with subsistence agriculture being the primary source of food and income. The key environmental distinctions within Awoja are (a) the high-rainfall mountain areas, (b) lowland plains with sufficient rainfall to support rainfed agriculture, (c) extensive wetlands and lakes, and (d) the dry northern cattle corridor occupied by pastoralists. Most

<sup>5</sup> Soroti town, with 66,000 people (UBOS, 2011) is only partially within the catchment. Kumi is the next largest town with a population of 13,000 in 2011.

In 2013 the catchment population was estimated at 1,362,377 rural (95%) and 76,531 urban (5%).

agriculture within the catchment is rainfed. The current land-use practices of the Awoja catchment are depicted in *Figure 4 -12*.

*Figure 4-14: Land use practices in the Awoja Catchment*

Crop farming and the sale of surplus crops, cattle keeping, fisheries and charcoal provide additional livelihood strategies.

There is no mining, manufacturing or value addition at commercial scale (sand mining is for local use only). Ecotourism potential has been identified for Lake Bisina and Mount Elgon.

#### **4.5.3 Land Ownership**

Land is the fundamental asset in agricultural and rural development. Access, tenure security and gender equity are essential for the effective use of the land as a productive asset.

In the Awoja Catchment a combination of land tenure systems exist:

- 1) Freehold (with full rights registered ownership),
- 2) State leasehold (land leased for a specific period under certain conditions), and
- 3) Community-based / customary tenure (whereby land is regulated by customary rules often determined by clan or family leaders).

Some institutions such as churches, schools, and government institutions hold land on freehold. However, the customary land tenure system, which does not favour investment predominates, but freehold is on the increase in rural areas. In contrast to this, individuals basically own land on leasehold basis in urban areas. In all the existing systems, except for freehold title, women have been excluded from owning land. Of the estimated titled 10% of the total land of Uganda, 20% is owned by women, although most of this is low value cropland<sup>6</sup>. This accords with findings from interviews with Awoja women during the reconnaissance visit, which indicated that although women own land, in most cases they own the land away from rivers, where it is not possible to irrigate. This situation has an impact on women's economic situation and they must be given equitable opportunity as beneficiaries in developing irrigation infrastructure. There are also other pressures behind the different types of land ownership like the regulation by local customs, land fragmentation, lack of written records on customary tenure, lack of observance of land use control and a complicated process in the acquisition of a leasehold.

#### **4.5.4 Agriculture**

The majority of farming is small scale and rainfed, where productivity is low and vulnerability to climate variability (including floods and droughts) is high. Food insecurity impacts a majority of the population, particularly in Karamoja. Three farming systems dominate in the Awoja Catchment, namely the Montane System, the Teso System and the Pastoral system.

The **Montane farming system** is practiced at higher altitudes (1,500 to 1,750masl.) such as in Kapchorwa, in the Mount Elgon region. This area receives high and effective rainfall and cloud cover, supporting cultivation of staple foodstuffs such as banana, sweet potatoes, cassava, and Irish potatoes. Arabica coffee is also grown above 1,600 metres. Temperate crops such as barley and wheat are also produced. Because of the soil fertility, areas within this farming system are densely populated and agriculture is intensive, dominated by smallholdings of about 1.5 hectares. As a common practice, crop residues are used as livestock feeds.

The **Teso farming system** is more common to the west, in the districts of Soroti and Kumi. This area has sandy-loams of medium to low fertility and rainfall is bimodal. The dry season, from December to March, is longer than in other areas. The area is characterised by moist vegetation and grass savannahs with short grassland, ideal for grazing. The staple foods are millet, maize, and sorghum. Other crops are oil seed crops (groundnuts, simsim, and sunflower) with cotton as the major cash crop. People within this area practice mixed agriculture (crops and livestock). There is no mechanisation and land is tilled using oxen. The average farm size in this area is about three hectares. Similar to the Montane system, crop residues are commonly used as livestock fodder.

The **Pastoral farming system** applies to the northern and north-eastern part of the catchment. Here rainfall is inadequate for crop-dependent livelihoods although drought-tolerant crops are cultivated, including finger millet, simsim, cassava, and sorghum. Tobacco and cotton are major cash crops. The grassland is short and used for communal grazing. This area is well known for its pastoral system with semi-nomadic cattle herding, with the

---

<sup>6</sup> National Development Plan, 2010.

lack of permanence providing a challenge for water resources planning. Pastoral areas are often overgrazed as livestock keepers overstock as a survival strategy for times of drought. This has led to land degradation.

Irrigation is supplementary in that crops also make use of natural rainfall. This category of supplementary irrigation to improve rainfed agriculture is for areas where crops can be grown, at least some of the time, without any irrigation – but where benefit to production or significant reduction in risk can be achieved through supplementary water supply at critical times. Watering is, therefore, aimed at avoiding the worst impacts of droughts. Some existing irrigation schemes at the foothills of Mount Elgon as well as a few potential irrigation sites are indicated in *Figure 4-13*.

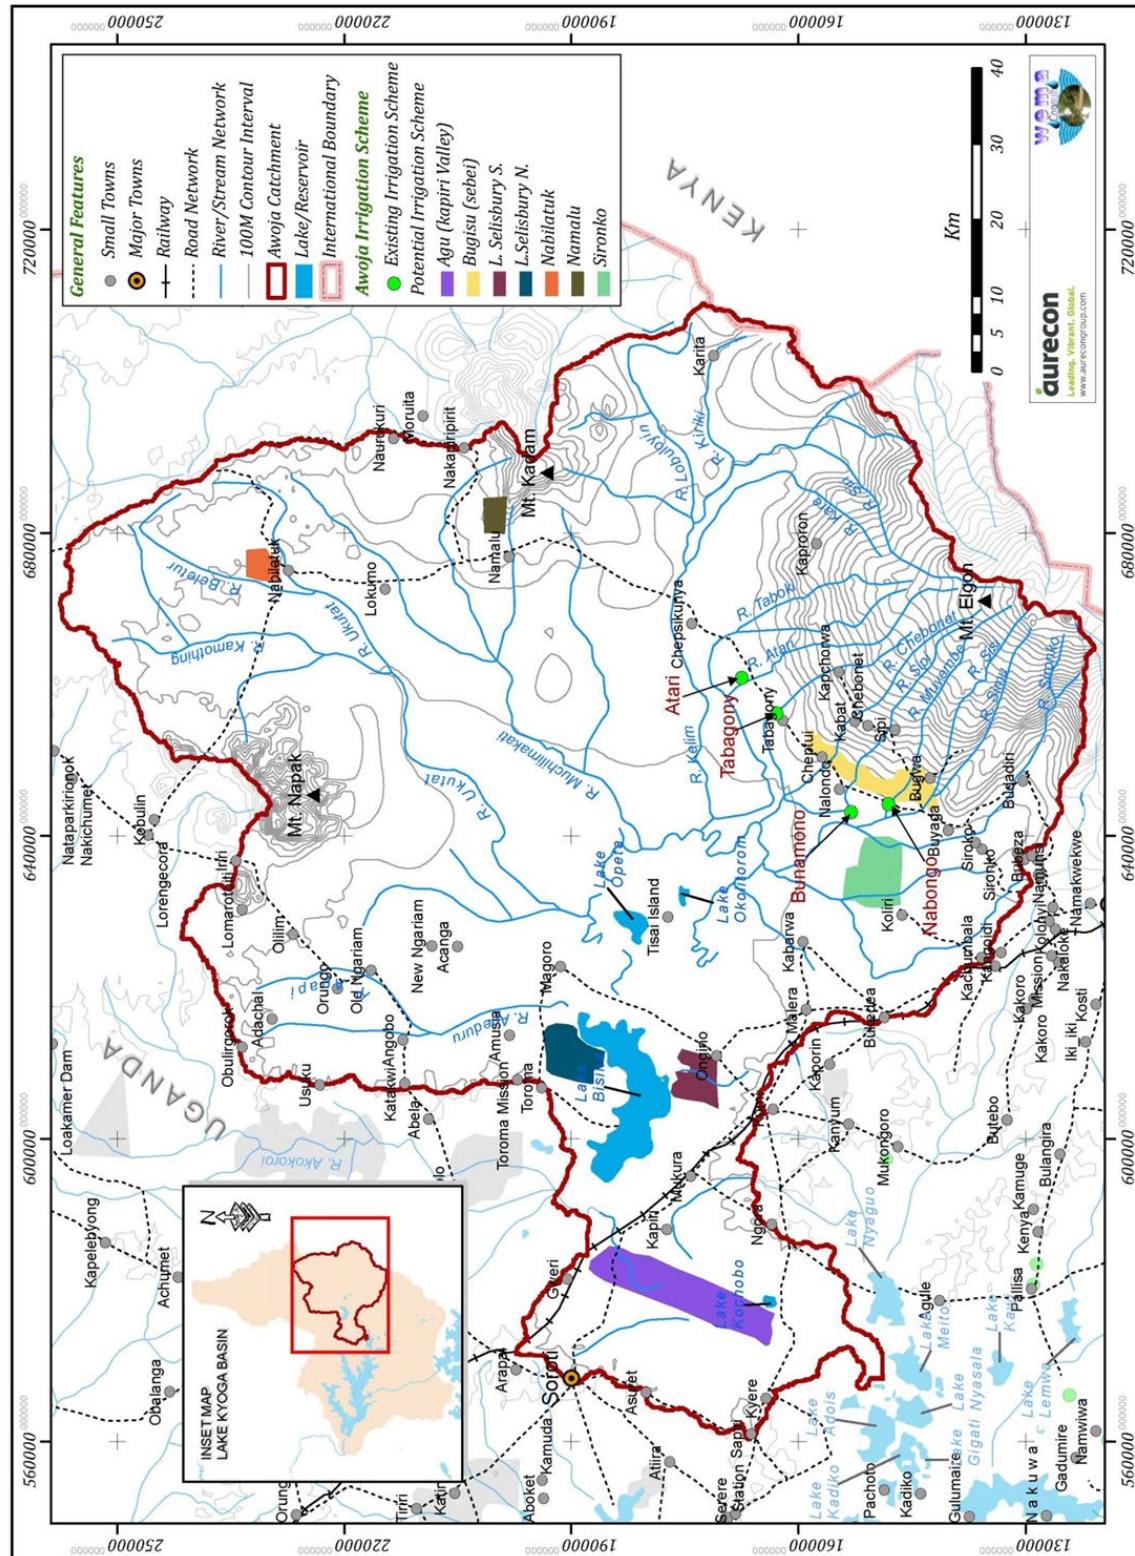

Figure 4-15: Existing and potential irrigation sites in Awoja catchment

It is estimated that the total potential for "Type A" irrigation (good soil and close to water) in the Awoja Catchment is 28,368ha and the total potential for "Type B" (suitable soils that can be used if water can be made available) irrigation is 13,344ha. The total irrigation potential in Awoja is estimated to be 41,712ha.

Crop areas cultivated in each sub-catchment are shown in *Table 4-19 Rainfed crop areas per sub-catchment*.

**Table 4-21 Rainfed crop areas per sub-catchment**

| Sub-catchment number | Sub-catchment   | Rainfed crop area (km <sup>2</sup> ) |
|----------------------|-----------------|--------------------------------------|

|                      | <b>Awoja</b>    | <b>5,371</b>                         |

#### 4.5.5 Livestock

While the districts within the cattle corridor (Napak, Nakapiripirit, Kumi, Katakw, Ngora, Amudat, Bukedea, and the top part of Bulambuli) are highly dependent on livestock and hence also on stock-watering facilities, livestock also complements cultivation in the central and southern parts of the catchment. Livestock keeping in which cattle, sheep, goats and pigs are included is thus an important cash earning resource of the farm household within the Awoja Catchment. It is also one of the reliable sources of livelihood. In tsetse-fly free areas, livestock are extensively kept. Nakapiripirit is the largest among the districts with 41% of the total number of cattle in the region. In Katakw, the number has gone down to 8%, which can partly be attributed to the former cattle looting by Karamajong warriors. Stakeholders acknowledged in consultations that overgrazing in some parts of the catchment such as Tisai, Ongino, Agu, Malarea, and Kolir (in Bukedea, Kumi, and Ngora) leads to destruction of vegetation cover, exposing water resources to erosion.

#### 4.5.6 Fisheries

Capture fisheries and fish farming provide another important opportunity for livelihoods. Capture fishing is practiced to a greater extent than aquaculture/fish farming. For capture fishing, small non-motorized canoes and either gillnets or seine nets are used, although the use of seine nets is now illegal. Wetlands are of particular importance to the fishing industry. The main fish products are catfish, carp, and tilapia.

Fishing continues throughout the year, although fish are scarce during periods of low flow. Extensive illegal and unrecorded fishing takes place and there is room for improvement in the management of fishing practices. Fisheries are an important agriculture subsector, being the second leading foreign exchange earner after coffee.

There is a widening gap between supply and demand for fish, indicating a growing opportunity for aquaculture on a larger scale, especially as the population demand grows. Large-scale aquaculture could potentially also support an export industry.

#### 4.5.7 Tourism

In the 1960s, Uganda was the main tourist destination in East Africa and tourism was one of the main economic sectors in the country. The political upheaval of the 1970s and 1980s led to looting of tourism infrastructure and hunting of wildlife in protected areas (NELSAP, 2012). The potential exists to re-establish tourism in Uganda and in the Awoja Catchment. The mountains of the northeast, including the Mount Elgon National Park, offer sightseeing and hiking opportunities. Lake Opeta and Lake Bisina already draw many bird watchers and were declared Ramsar sites. Protected areas such as the Pian Upe Wildlife Reserve and the Mount Elgon National Park are shown in *Figure 4-14* (NELSAP, 2012). These protected areas as well as the mountains, Sipi waterfalls, and the Nyero Rock paintings hold potential for the development for tourism (NELSAP, 2012). The expansion of the tourism industry will lead to further livelihood opportunities through crafting and service industries.

Lake Bisina and Lake Opeta are Important Bird Areas (IBA) for shoebills, fox's weaver, papyrus gonoleks, white-winged warbler and others thus making them conservation areas of high significance. The lakes' system is also important as a refuge for fish species that have gone extinct in the main lakes like Lake Victoria and Lake Kyoga. Furthermore, the lakes play a major role for the socio-economic activities like fishing, transport, water supply for domestic use and livestock of the surrounding communities.

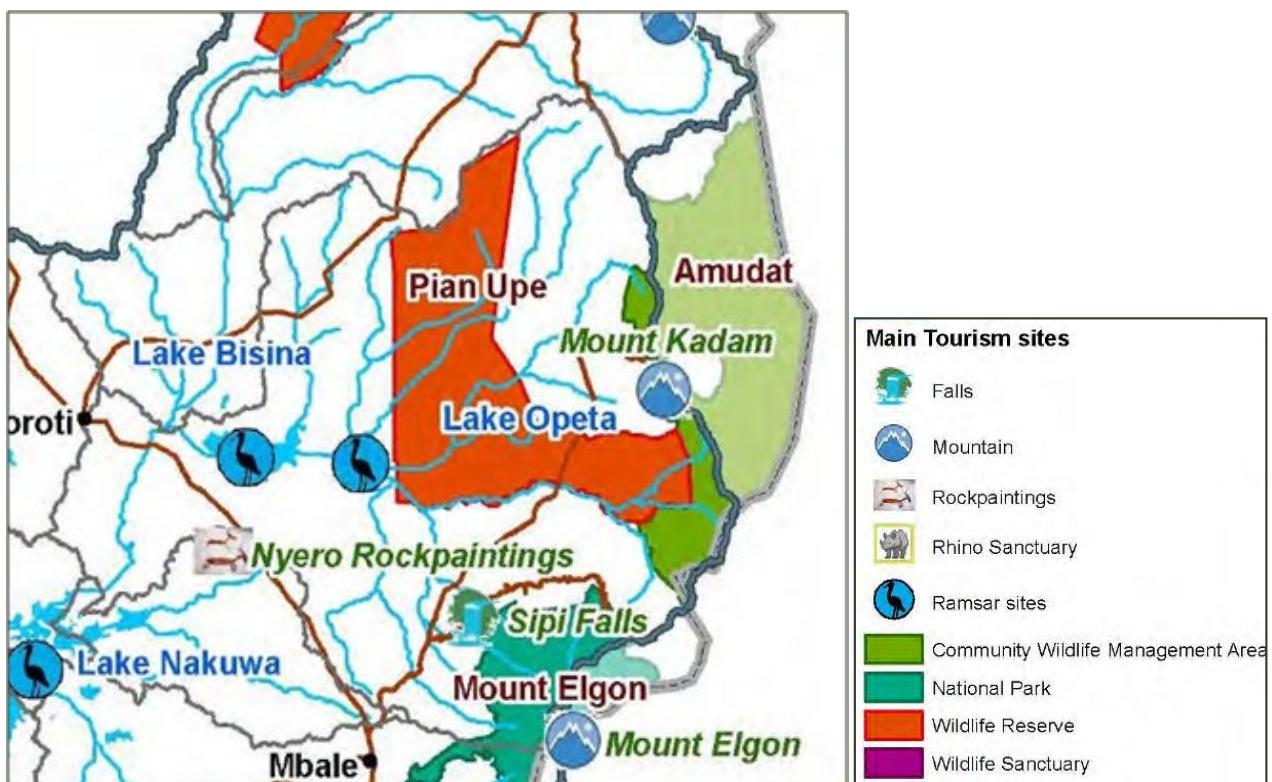

Figure 4-16: Potential tourism areas in the Awoja catchment

#### 4.5.8 Vegetation / Land cover

Most of the Awoja Catchment is covered by open shrubs with grassland, especially in the central, northern and eastern part of the catchment. In the western part of the catchment, the land cover is dominated by small herbaceous fields with crops and sparse trees. The Mount Elgon region has open shrub land, grasslands, and herbaceous fields on the mountain peaks. Trees and shrubs cover the mountain slopes. Where the slopes flatten out; there are crops, small herbaceous fields, and some trees. Mount Kadama is also covered by open trees and shrubs. The land cover for the Awoja Catchment is shown in *Figure 4-15*. The land is highly cultivated by subsistence farmers, especially in the Mount Elgon region.

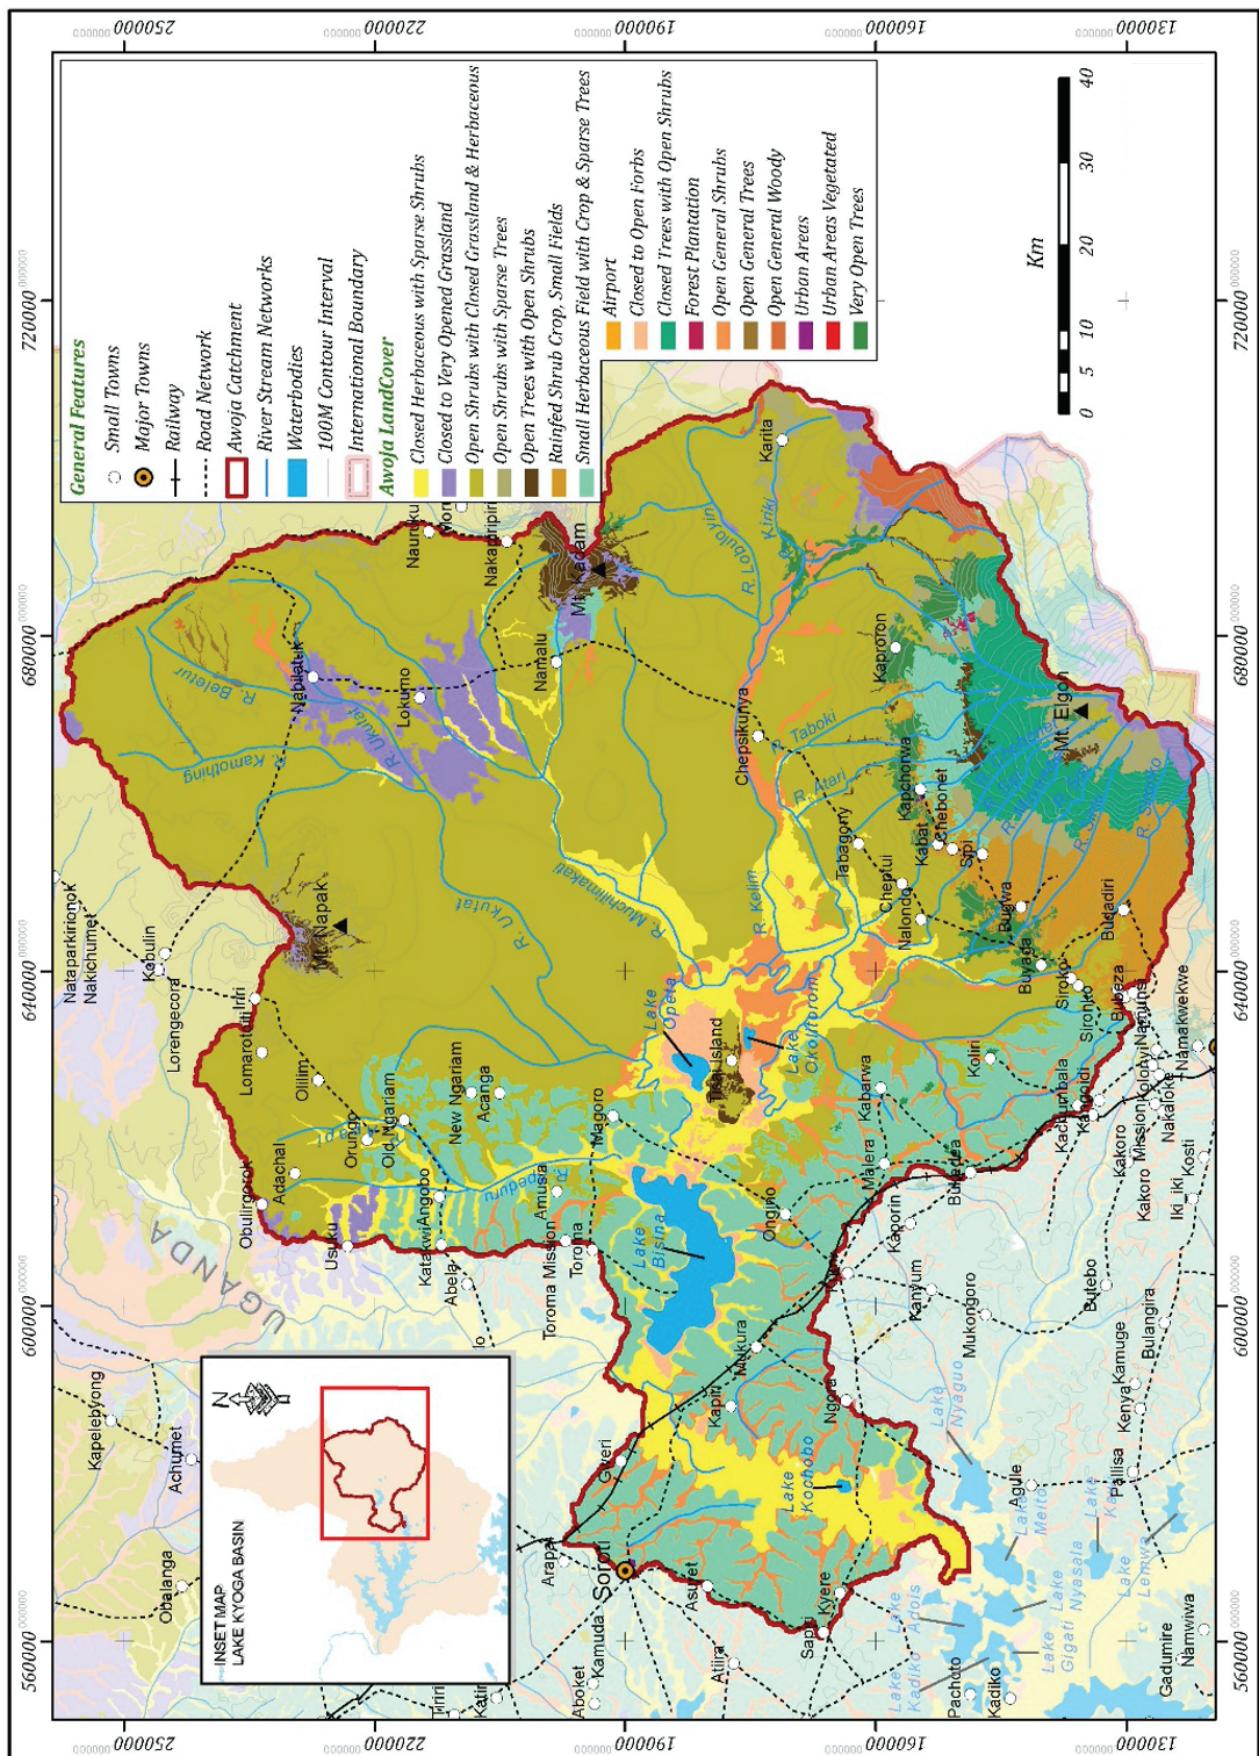

Figure 4-17: Land cover within the Awoja Catchment

Key features in the land cover of the Awoja are the extent of human encroachment in the natural landscape – reflected in both cultivation and deforestation – the dry cattle corridor to the north, and the importance of wetlands. There is limited natural forest and no commercial timber production.

#### 4.5.9 Nature conservation and protected areas

Significant parts of the catchment are covered by formal nature conservation and protected areas such as game reserves, central forest reserves, national parks, local forest reserves, and hunting areas (in the Northern parts of Nakapiripirit (approximately 50%), Kween (65%), Kapchorwa (50%) districts, eastern parts of Bukwa (45%), and Katakwi (40%) districts as well as 90% of Amudat district. The largest protected areas in Awoja are the Pian Upe Wildlife Reserve and the smaller Mount Elgon National Park being situated in **Kapchorwa, Bulambuli, Kween, Bukwa, and Sironko** districts and consisting of a range of vegetation zones including afromontane forest. Smaller community wildlife management areas and some forest reserves have also been set aside. However, due to the increasing population pressure protected areas are being encroached upon as land to settle on becomes scarce, especially in the northern part of the catchment. Harvesting of forest products is forbidden, but local people continue to harvest firewood and other forest products resulting in conflict with Park authorities. The forest reserves in the catchment are both central and local. However, a number of these have been encroached upon for cropping, grazing, and the harvesting of natural resources.

The major protected areas as well as the lake and wetland areas (white,) which limit the habitable area in the catchment considerably are shaded in white in the map in *Figure 4-16*.

Figure 4-18: Inhabitable areas of the Awoja catchment (green)

#### 4.5.10 Limits to land and food production

The impact of the rapidly growing population on the demand for food can be deduced from Figure 4-17. In this figure, the maximum arable land is indicated, along with the possible growth in rainfed agriculture up until 2040 without improved cultivation practices. The total available inhabitable area in Awoja is also indicated. From the graph, it can be deduced that the area currently remaining for rainfed agriculture development will reach its limit by 2015. Therefore, other opportunities to enhance food security – crop and cultivation practice improvement, irrigation, and aquaculture will have to be implemented.

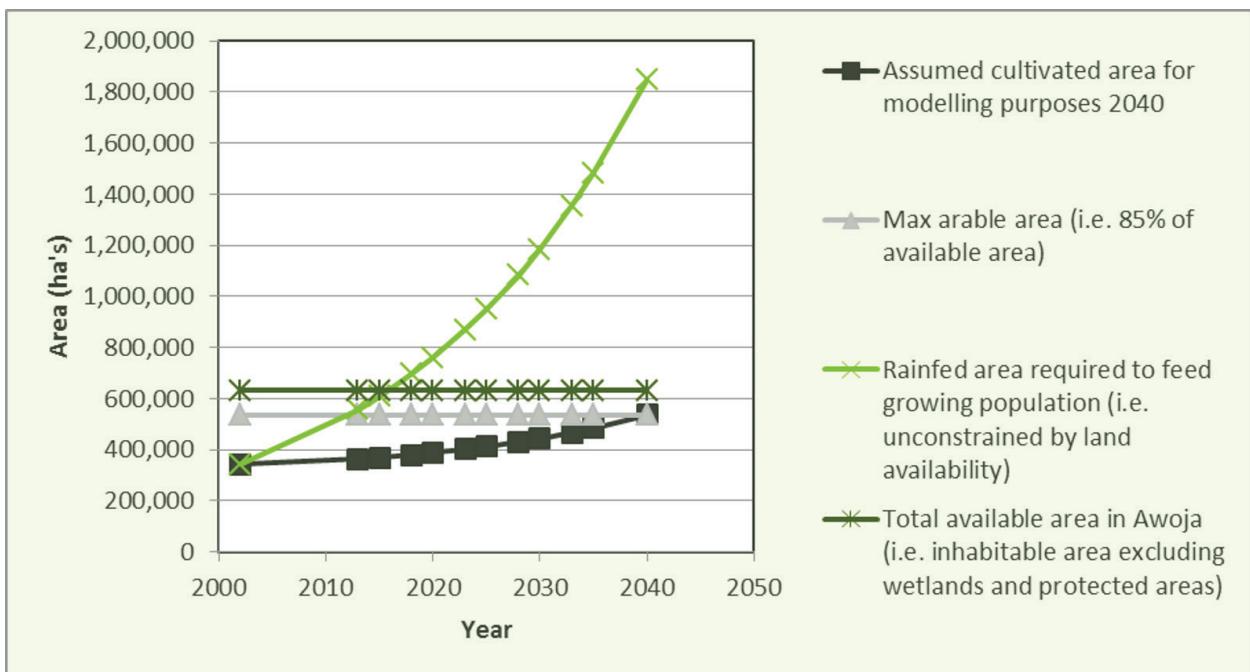

Figure 4-19: Comparison of potential rainfed area and required rainfed area to sustain population growth

#### 4.5.11 Social and Environmental Issues and Implications

Some of the social and environmental issues emanating from the characteristics of the catchment, population and important social aspects and economic activities are indicated in Table 4-20 Social and Environmental Issues and Implications.

Table 4-22 Social and Environmental Issues and Implications

| Issues   | Background and Implications   |
|--|---|
| <b>High population density and growth rate</b> | The Awoja catchment has a fast growing population, currently estimated at 1.4 million people, but, if the growth rate, which varies between 4% and 6% in the catchment, is not contained, this will increase to 4.8 million people by 2040.   |
| <b>High poverty levels</b>                     | In the Awoja Catchment poverty and food insecurity are worse than the national average. (North-eastern Uganda, which includes part of the Kyoga Basin, is the poorest region in the country, with a poverty level at 75.8% of the population). The cattle corridor is also significantly poorer than the wetter parts of the basin. There is an obvious need to raise the catchment's socio-economic status.  |
| <b>Limited land ownership</b>                  | Landholdings are small. Large areas of the catchment were set aside for conservation and there are extensive lakes and wetlands that limit habitable land. Some changes are made from the traditional land tenure systems, but generally there are still some uncertainties on ownership that hamper private development. The diminishing land holdings add to low productivity and poverty. The cattle corridor is occupied by pastoralists, some of whom are still nomadic. |

| Issues   | Background and Implications   |
|--|---|
| <b>Livelihoods-subsistence agriculture with low productivity</b> | The population is almost entirely rural and more than 85% of livelihoods are dependent on agriculture. Most of the agriculture is subsistence, with low productivity levels relying on rainfed agriculture. This leads to food insecurity and poverty. Major staple food crops include bananas, sweet potatoes, cassava, rice, Irish potatoes, millet, maize and sorghum. There are no significant formalised irrigation schemes. The Awoja Catchment does not have significant mineral or other resources that can be harnessed. |
| <b>Livelihoods – cattle farming</b>                              | Livestock including cattle, sheep, goats and pigs are important cash earning resources of the farm households within the Awoja Catchment. Overgrazing in some parts of the catchment leads to the destruction of the vegetation cover exposing rangeland to degradation by erosion.   |
| <b>Limited access to basic services</b>                          | Limited access to clean, potable water. Very few people have water to put to productive use. Poor quality water due to upstream soil erosion and upstream local pollution (especially faecal pollution). The Karamoja region needs special attention to address deep poverty and lack of social services.   |
| <b>Natural disasters</b>   | Droughts - mainly related to the Karamoja region - and floods occurring in all low lying areas, now seemingly exacerbated by climate change are features of the landscape. Landslides and mudslides caused by cultivation of steep slopes leads to loss of life, land and infrastructure and are repeatedly experienced in the districts around Mount Elgon.  |
| <b>Land degradation</b>  | Overgrazing and exceedance of carrying capacities of land types lead to erosion and soil loss as already confirmed by some districts e.g. Amudat.   |
|  | Damage to wetlands due to encroachment activities. Deforestation caused by uncontrolled harvesting of timber and biomass in the whole catchment.  |
| <b>River degradation</b>   | Land use (cultivation and livestock) up to river edges, a common phenomenon in Awoja causes loss of riparian vegetation and destabilising of river banks, adding to soil erosion and sediment loads downstream.   |
| <b>Wetlands</b>  | Encroachment and exploitation of wetlands cause siltation and degradation. Wetlands lose their ecological functionality and capacity to provide ecosystem services, including ability to filter water to lakes. Floods result in the displacement of people and loss of crops.  |

Water is the one decisive asset: there are some opportunities for small-scale hydropower on the lower slopes of Mount Elgon, with feasibility studies under way. No large dams were proposed, nor do any suitable sites for such dams present themselves. The future of social development in the Awoja catchment is dependent on sound environmental management, moderate utilisation, and people-based development programmes.

## 4.6 Stakeholders

Stakeholders are essential throughout the respective activities of the development and implementation of the catchment management plan. Engagement of stakeholders during this work concentrated on those with direct interest or involvement in support and implementation of water resources measures within the Awoja Catchment.

### 4.6.1 Identification and Analysis of Stakeholders

Identifying the stakeholders is key to the overall success of engagement in catchment management planning. Stakeholder identification was undertaken to determine all organisations and communities which may be affected (positively or negatively) by the water resources management in the catchment and who may be able to contribute to the programme of work due to their expert knowledge and or experience in the project areas. The operational environment of the Kyoga WMZ team, in terms of stakeholders in the use, development and management of water resources in the catchment was evaluated, and key stakeholders identified and analysed.

The project for the development of the Awoja Catchment Management Plan was launched during a week-long series of workshops that included the following:

- Draft National Water Resources strategy
- Catchment Planning Guidelines

- Water Source Protection guidelines
- Launch of Awoja Catchment Management Plan.

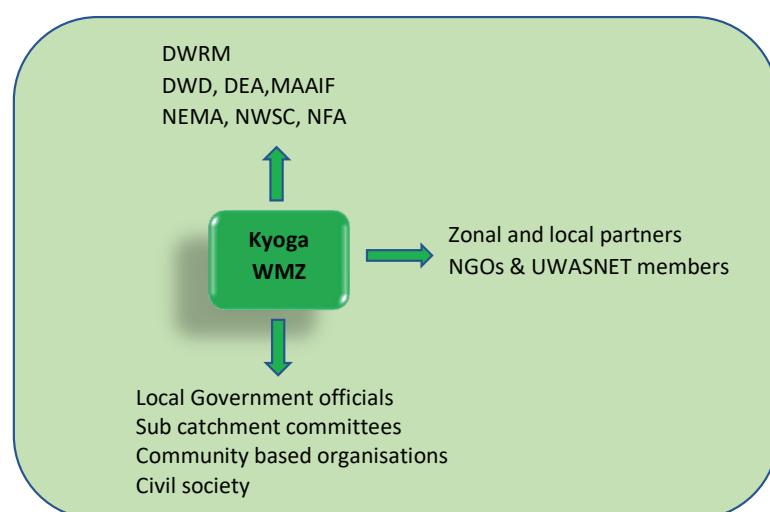

The Kyoga WMZ team and key stakeholders present were introduced at these meetings. Lists of attendees for the respective workshops were obtained. Individual discussions were held with key stakeholders.

Most of their interaction with stakeholders was in the southern, more populated area, and around Mbale. Not much interaction was yet done with stakeholders in the Awoja Catchment. They regarded the respective ministries and district officials as the primary stakeholders. Contacts with stakeholders met at the catchment plan launch workshop and National Water Resources Plan workshop were followed up to obtain more contacts. The UWASNET was especially very helpful. At Serere and Soroti, the regular Joint Water and Sanitation Advocacy Committees were being held when visiting the area. The program of field visits was adjusted to be able to attend part of these meetings organised by the Technical Support Unit (TSU). Some key stakeholders involved in the water supply and sanitation sector were met and discussions held.

The following actors were identified to play a key role in the formulation and implementation of the catchment management plan:

- a) Water and water-related departments of the state:
  - i) Ministry of Water and Environment (MWE) with its respective divisions
  - ii) Ministry of Agriculture Animal Industry and Fisheries (MAAIF)
  - iii) Ministry of Energy & Mineral Development (MEMD)
- b) National Environment Management Authority (NEMA)
- c) National Forestry Authority (NFA)
- d) District authorities
- e) Water services providers, for drinking water supply and sanitation
- f) Regional and National NGOs and CSOs
- g) Professional organisations
- h) Users and user groups including water users committees, youth, women and farmers.

The team indicated that the districts are the key stakeholders in the area as they are responsible for implementation of the bulk of projects and services relating or affecting water resources. It was suggested that the Chief Administration Officers (CAO), water development officers and environmental officers of the respective district offices would be important stakeholders to work closely with. *Figure 4-18* indicates the respective levels of interaction of stakeholders with the Kyoga WMZ team.

*Figure 4-20: Stakeholder interaction with the Kyoga WMZ team*

Stakeholders can be expected to put forward a range of concerns/issues, which have a specific relation to their respective areas. Different issues are likely to emerge as primary for different stakeholders. The MWE's Kyoga WMZ team, together with the consultant, identified important stakeholders who would be helpful in developing the catchment management plan. Stakeholders identified comprised lead agencies in ministries and district local government administrations within the 14 districts, NGOs, CBOs, and local communities.

The interaction of key stakeholders with the Kyoga WMZ Team and their involvement in developing and managing water and related activities in the catchment is shown in *Figure 4-19*. More detail on these stakeholders is provided below.

Figure 4-21: Stakeholder groups interacting with Kyoga WMZ

#### 4.6.2 Community groups

Water user groups, youth, women, and farmers were also identified as key stakeholders. These were included in the first instance to ensure that the voices and interests of weak and vulnerable stakeholders are heard and can influence the decision-making process. Secondly, public participation creates increased accountability for the policy makers. Both of these outcomes enhance environmental governance. Furthermore, public participation strengthens democratic institutions by reducing the ability of vested interests to misrepresent their interests as those of the public at large.

Key stakeholders to include in developing and managing water and related activities in the catchment were identified, *Table 4-21*: Key stakeholder groups identified in process of development of CMP. These stakeholders were invited to the stakeholder forum meetings.

*Table 4-23: Key stakeholder groups identified in process of development of CMP*

| Government Institutions  | Public and private sector Organisations   | NGOs and Civil Society Organisations   | Public  |
|--|---|--|---|
| Governmental organisations with a direct interest in IWRM outcomes and/or that are able to provide support   | Public and private sector organisations   | Organised groups involved in specific locations or issues in the catchment including NGOs and community service organisations  | Individuals in the catchment or region representing user groups with interest in water management   |
| <ul style="list-style-type: none"> <li>• District officials in the 14 districts</li> <li>• Ministry of Water &amp; Environment (MWE)</li> <li>• Department of Rural water supply in MWE</li> <li>• Ministry of Agriculture, Animal Industry and fisheries (MAAIF) – Directorate of Irrigation</li> <li>• Directorate of Fisheries</li> <li>• Wetlands Management Directorate in MWE</li> <li>• Directorate of Water Development (DWD)</li> <li>• Directorate of Water Resource Management (DWRM)</li> <li>• Ministry of Energy &amp; Mineral Development (MEMD)</li> </ul> | <ul style="list-style-type: none"> <li>• IUCN</li> <li>• Veritas</li> <li>• Radio Kapchorwa</li> <li>• Voice of Teso</li> <li>• Teso Broadcasting Services (TBS Radio)</li> </ul> | <ul style="list-style-type: none"> <li>• UWASNET</li> <li>• Soroti Catholic Diocese Integrated Development Organisation (SOCADIDO)</li> <li>• Uganda Muslim Rural Development Association (UMURDA)</li> <li>• WaterAid</li> <li>• HorizonT3000</li> <li>• German Technical Cooperation (GIZ)</li> <li>• SNV</li> <li>• Christian Action to End Poverty (CATEP)</li> <li>• Temele Development Organization (TEMEDO)</li> <li>• ACTED</li> <li>• Drop in the bucket</li> </ul> | <ul style="list-style-type: none"> <li>• Fishermen</li> <li>• Farmer groups</li> <li>• Soroti Catholic Diocese Integrated Development Organisation (SOCADIDO)</li> <li>• Uganda Muslim Rural Development Association (UMURDA)</li> <li>• WaterAid</li> <li>• HorizonT3000</li> <li>• German Technical Cooperation (GIZ)</li> <li>• SNV</li> <li>• Christian Action to End Poverty (CATEP)</li> <li>• Temele Development Organization (TEMEDO)</li> <li>• ACTED</li> <li>• Drop in the bucket</li> </ul> |

#### *4.6.3 Stakeholder Issues' mapping*

From discussions with the stakeholders it was evident that measures are being taken to address water resources, catchment management and livelihoods issues – by Government Departments, Districts, NGOs, and other institutions. Various national and other large programmes provide support, but ground-level activities are being undertaken at the district level. The following are examples of these:

- Every District has an active borehole rehabilitation and development scheme
- Some valley dams and tanks are being de-silted
- Piped water schemes are being installed
- Tree planting/reforestation programmes were initiated
- There are some catchment rehabilitation projects (catchment or source protection) in place (riverbank erosion, tree planting and contouring). These are all elements of catchment source protection
- Rainwater harvesting projects are being initiated

- Every district reports its engagement in sensitisation and awareness raising
- Water quality monitoring was addressed (although at very low level)
- The Department of Agriculture is engaged through the NAADS Programme in seeking to improve agricultural production through improvements to crops, stock and farming methods.

An overview of the challenges and issues culminating from the spectrum of stakeholders with the causes and consequences is detailed in *Table 4-22: Issues arising from stakeholder interaction*. These issues are later analysed and options identified which translate into interventions within the catchment management plan.

**Table 4-24: Issues arising from stakeholder interaction**

| Issue                         | Causes  | Consequences   |
|-------------------------------|---|--|
| Soil erosion                  | <ul style="list-style-type: none"> <li>▪ Agricultural practices</li> <li>▪ Land degradation</li> <li>▪ Riverbank degradation</li> <li>▪ Deforestation</li> <li>▪ Overgrazing</li> </ul> | <ul style="list-style-type: none"> <li>▪ Siltation</li> <li>▪ Water quality</li> <li>▪ Flooding</li> <li>▪ Wetland degradation</li> <li>▪ Landslides</li> </ul>  |

A SWOT analysis *Table 4-23: SWOT analysis table of the situation in Awoja Catchment* was compiled on the basis of the situation as understood for the Awoja Catchment. This analysis was informed by the input through participation by stakeholders, the water resources assessment report as well as the social and environmental assessment.

*Table 4-25: SWOT analysis table of the situation in Awoja Catchment*

## 5. VISION, OBJECTIVES AND ANALYSIS OF OPTIONS

### 5.1 Principles Guiding Development

Development based on growth is a workable paradigm where there is room for growth. It has become apparent that unchecked growth becomes unsustainable and limits to growth need to be identified in this new paradigm. This applies both globally and to the Awoja Catchment. Resolving immediate demands does not resolve the future. Rather than encouraging yet further expansion in the demand for resources, development should aim at stability and harmony in utilisation of all that the environment has to offer..

- Stability brings Sustainability. Projects reliant on continuous growth are by definition not sustainable.
- Resources are finite and this limits the number of people that can live off natural resources.
- Limits to growth are set by carrying capacity and sustainable utilisation.
- Infrastructure is not sustainable without long-term maintenance.
- Infrastructure that is not maintained brings problems, worry, and risk - and little benefit. Kokuwam Valley Dam on the Namalu River in Nakapiripirit is an example.
- The root causes of soil erosion must be addressed.
- Food security can be enhanced by innovation and technology.
- Legislation is of little value without enforcement.
- A long-term perspective is required.

### 5.2 Catchment Issues

During the stakeholder workshop in Soroti on the 18th July 2013, the stakeholders listed and prioritised the most important issues regarding the water resources in their districts. The results are shown in *Table 5-1*. Other issues, which were not prioritised, but stated by the stakeholders are added in the table.

*Table 5-1: Issues prioritised by stakeholders (Soroti Workshop, 18 July 2013)*

| Priority | Bukwo, Kween, Kapchorwa | Sironko, Bulambuli              | Bukeda, Kumi, Ngora, and Katakwi     | Napak, Amudat, Nakapiripirit   |
|----------|-------------------------|---------------------------------|--------------------------------------|--|
| 1        | Deforestation           | Deforestation                   | Flooding                             | Food insecurity  |
| 2        | Soil erosion            | Soil erosion and siltation      | High population growth rate          | Lack of awareness / Attitude change  |
| 3        | Floods                  | Droughts, floods and landslides | Limited tree coverage/ Deforestation | Encroachment<br>a. Deforestation<br>b. Land reclamation<br>c. Charcoal burning, commercialisation<br>d. Bush burning |
| 4        | Shortage of energy      | Riverbank degradation           | Wetlands degradation                 | Inadequate water resource information  |

| Priority   | Bukwo, Kween,<br>Kapchorwa   | Sironko,<br>Bulambuli         | Bukedea, Kumi, Ngara,<br>and Katakwi   | Napak, Amudat,<br>Nakapiripirit       |
|--|--|-------------------------------|--|---------------------------------------|
| 5  | Lack of awareness<br>on environmental<br>management  | Regulation and<br>enforcement | Poor agronomic<br>practices  | Insecurity                            |
| 6  | Overgrazing  | Limited awareness             |  | Floods / Droughts                     |
| <b><i>Additional issues listed but not prioritised by stakeholders</i></b> |  |                               |  |                                       |
|  | a. Siltation<br>b. Drought<br>c. Population<br>d. Water Pollution<br>e. Poverty<br>f. Landlessness<br>g. Weak institutional regulation and enforcement<br>h. Low safe water coverage and poor sanitation | a. Institutional capacity     | a. Soil erosion<br>b. Overgrazing<br>c. Domestic water supply<br>d. Water for production<br>e. Traditional cultural growth of short term crops<br>f. Customary land tenure | a. Lack of alternative energy sources |

In order to sort and classify the issues and provide an additional perspective, they are put into categories or themes *Table 5-2*. Additionally, they are linked to their respective strategic implications and first possible measures to mitigate issues that are identified including suggestions from the stakeholders. Thus, this prepares/provides the path to develop options to address the issues.

*Table 5-2: Issues, strategic implications, and possible measures*

#### **Climate related issues**

| Issues         | Strategic Implications   | Possible measures   |
|----------------|--|---|
| Drought hazard | <ul style="list-style-type: none"> <li>▪ Starvation – especially in the cattle corridor.</li> <li>▪ Food security</li> </ul> | <ul style="list-style-type: none"> <li>▪ Irrigation schemes and irrigation technologies (especially pump technology)</li> <li>▪ Small-scale irrigation</li> <li>▪ Stock watering dams, especially their density</li> <li>▪ Improvement of monitoring networks</li> </ul>  |
| Flood hazard   | <ul style="list-style-type: none"> <li>▪ Flood damage, loss of crops, property, lives</li> </ul>                             | <ul style="list-style-type: none"> <li>▪ Review of the reasons for increased flooding</li> <li>▪ Flood warning systems</li> <li>▪ River protection works</li> <li>▪ Improvement of monitoring networks</li> </ul>   |
| Landslides     | <ul style="list-style-type: none"> <li>▪ Loss of life, land, crops, infrastructure</li> <li>▪ Erosion</li> </ul>             | <ul style="list-style-type: none"> <li>▪ Land use planning. Comprehensive and integrated reforestation and rehabilitation, Implementation of Sustainable Land Management Programme</li> <li>▪ Establishment of siltation monitoring system for future planning</li> </ul> |

### Catchment Management

| Issues                        | Strategic Implications   | Possible measures   |
|-------------------------------|--|---|
| Soil erosion                  | <ul style="list-style-type: none"> <li>▪ Siltation of lakes</li> <li>▪ Deterioration of water quality</li> <li>▪ Flooding</li> </ul> | <ul style="list-style-type: none"> <li>▪ Land use planning</li> <li>▪ Reforestation</li> <li>▪ Protection</li> <li>▪ Rehabilitation</li> <li>▪ Field management (contouring, buffer zones for river banks and roads)</li> <li>▪ River bank protection</li> <li>▪ Road drainage</li> <li>▪ Grazing strategies</li> </ul> |
| Deforestation                 | <ul style="list-style-type: none"> <li>▪ Global warming</li> <li>▪ Soil erosion</li> <li>▪ Fewer resources for future use</li> </ul> | <ul style="list-style-type: none"> <li>▪ Demarcation of rehabilitation zones</li> <li>▪ Reforestation</li> <li>▪ Projects to reduce demand (for charcoal, building, firewood – including energy efficient stoves and alternative sources of energy)</li> </ul>  |
| Riverbank erosion             | <ul style="list-style-type: none"> <li>▪ Flooding</li> <li>▪ Soil loss</li> </ul>  | <ul style="list-style-type: none"> <li>▪ Buffer zone policy</li> </ul>  |
| Grazing                       | <ul style="list-style-type: none"> <li>▪ Loss of vegetation cover</li> </ul>   |   |
| Maintenance of infrastructure | <ul style="list-style-type: none"> <li>▪ Infrastructure lifespan is shortened</li> </ul>   | <ul style="list-style-type: none"> <li>▪ Management</li> <li>▪ Capacity building</li> </ul>   |

### Wetlands (Environmental Services)

| Issues  | Strategic Implications  | Possible measures  |
|---|---|--|
| <ul style="list-style-type: none"> <li>▪ Siltation</li> <li>▪ Degradation</li> <li>▪ Flooding</li> <li>▪ Encroachment and exploitation</li> <li>▪ Rice growing in seasonal wetlands and consequent vulnerability to flooding</li> </ul> | <ul style="list-style-type: none"> <li>▪ Wetlands lose their ecological functionality - Loss of ability to filter water to lakes</li> <li>▪ Displacement of people and loss of crops</li> </ul> | <ul style="list-style-type: none"> <li>▪ Framework Management Plan for Awoja Wetland System</li> <li>▪ Support to Wetlands Rehabilitation and Management Programme.</li> <li>▪ Monitoring of wetlands conditions and functionality and impacts of upstream management</li> <li>▪ Conversion of paddy rice to upland rice varieties.</li> <li>▪ Implementation of controls for over grazing and encroachment (by-laws)</li> </ul> |

### Providing Water to People

| Issues  | Strategic Implications   | Possible measures  |
|---|--|--|
| <ul style="list-style-type: none"> <li>▪ 90% of the population does not have ready access to clean, potable water</li> <li>▪ Very few people have water to put to productive use</li> <li>▪ Poor quality water due to upstream soil erosion and upstream and local pollution (especially faecal pollution)</li> </ul> | <ul style="list-style-type: none"> <li>▪ Health, water for productive use (subsistence and economy)</li> <li>▪ Vulnerability to drought – food security</li> <li>▪ Water needs treatment – but there are few treatment facilities. Silt fills dams and clogs wetlands. Pumps breakdown due to silt.</li> </ul> | <ul style="list-style-type: none"> <li>▪ Dams (large, small, multipurpose, valley dams and tanks)</li> <li>▪ Piped water supply</li> <li>▪ Boreholes</li> <li>▪ Rainwater harvesting</li> <li>▪ Shallow wells and springs</li> <li>▪ Water quality monitoring.</li> <li>▪ Implementation of comprehensive land management programmes</li> <li>▪ Guidelines and plans for rainwater harvesting (roof water tanks and larger underground tanks)</li> </ul> |

### Agriculture - Irrigated and Rainfed

| Issues  | Strategic Implications  | Possible measures  |
|---|---|--|
| <ul style="list-style-type: none"> <li>▪ Irrigation schemes not maintained</li> <li>▪ No storage dams</li> <li>▪ Difficulty in accessing water</li> <li>▪ Distance and access to markets</li> <li>▪ Valley dams non-functional</li> <li>▪ Limited use of groundwater</li> </ul> | <ul style="list-style-type: none"> <li>▪ Opportunity cost and wasted investment</li> <li>▪ Dry season shortages</li> <li>▪ Water may be available but cannot be used</li> <li>▪ Even if water is available – can the product be sold?</li> </ul>                          | <ul style="list-style-type: none"> <li>▪ Maintenance, planning and funding</li> <li>▪ Matching of dams to need</li> <li>▪ Introduction of technologies that can be used by small farmers (e.g. treadle pumps)</li> <li>▪ Refurbishment of roads</li> <li>▪ Sustainability plans</li> </ul>                         |
| <ul style="list-style-type: none"> <li>▪ Dependence on rainfed agriculture</li> <li>▪ No rainfed cash crops such as cotton or tobacco have been introduced or promoted</li> <li>▪ Rice, an important cash crop, is planted in the wetlands</li> </ul>                           | <ul style="list-style-type: none"> <li>▪ Requires systems focused on rainfed crops</li> <li>▪ Little opportunity for large scale commercial development unless rainfall reliably supports high value crops</li> <li>▪ Wetland degradation due to rice planting</li> </ul> | <ul style="list-style-type: none"> <li>▪ Crop selection, seed selection</li> <li>▪ Management of the land to optimise rainfall and soil moisture</li> <li>▪ Shift to upland rice cultivars</li> <li>▪ Subsidies - including seeds and fertiliser</li> <li>▪ Assurance of agricultural extension workers</li> </ul> |

### Cattle Keeping

| Issues   | Strategic Implications   | Possible measures   |
|--|--|---|
| Overgrazing  | <ul style="list-style-type: none"> <li>▪ Loss of vegetation cover, resulting in soil loss</li> <li>▪ Damage to wetlands</li> <li>▪ Poor quality livestock</li> </ul> | <ul style="list-style-type: none"> <li>▪ Stock enumeration</li> <li>▪ Determination of carrying capacities of different land types</li> <li>▪ Revision of grazing strategies</li> </ul> |
| Conflict with conservation                         | <ul style="list-style-type: none"> <li>▪ Less land for people and animals</li> </ul>   | <ul style="list-style-type: none"> <li>▪ Revision of conservation policies</li> <li>▪ Negotiations regarding encroachments</li> </ul>   |
| Cattle corridor – nomadic nature of cattle keepers | <ul style="list-style-type: none"> <li>▪ Difficult to provide services. Need to accommodate these differences.</li> </ul>  |   |

### Aquaculture

| Issues                 | Strategic Implications   | Possible measures  |
|------------------------|--|--|
| Decline of fish stocks | <ul style="list-style-type: none"> <li>▪ Loss of income</li> <li>▪ Food security.</li> </ul> | <ul style="list-style-type: none"> <li>▪ Resource management</li> </ul>  |
| Marketing              | <ul style="list-style-type: none"> <li>▪ Economic value of the resource.</li> </ul>          | <ul style="list-style-type: none"> <li>▪ Improvements to infrastructure (transport and access to information)</li> </ul> |

### Hydro-Electric Power

| Issues                                       | Strategic Implications  | Possible measures  |
|--|---|--|
| Shortage of energy (supply and distribution) | <ul style="list-style-type: none"> <li>▪ Fatal flaw for development: Inability to run irrigation pumps, cold chains.</li> </ul> | <ul style="list-style-type: none"> <li>▪ Hydropower installations; Multipurpose dams that provide power.</li> <li>▪ Investigation into alternative pumping technologies (small-scale irrigation)</li> <li>▪ Promote alternative energy (solar).</li> <li>▪ Energy efficient technologies.</li> </ul> |

### **Institutional**

| <b>Issues</b>   | <b>Strategic Implications</b>  | <b>Possible measures</b>   |
|---|--|--|
| Lack of capacity  | <ul style="list-style-type: none"> <li>▪ Limited ability to implement programmes</li> </ul>  | <ul style="list-style-type: none"> <li>▪ Capacity building at all levels of planning and action</li> <li>▪ Training and capacity building in NGOs</li> </ul>   |
| Lack of knowledge and understanding of impacts of day-to-day livelihoods on the landscape | <ul style="list-style-type: none"> <li>▪ Environmental degradation as a consequence of human behaviour that could be mitigated.</li> </ul> | <ul style="list-style-type: none"> <li>▪ Awareness raising</li> </ul>  |
| Failure to maintain infrastructure  | <ul style="list-style-type: none"> <li>▪ Wasted investment</li> <li>▪ Failed projects</li> </ul>   | <ul style="list-style-type: none"> <li>▪ Maintenance planning and budget provision must accompany all development plans</li> <li>▪ Entrenchment of principles of maintenance and assurance that this requirement becomes policy and thence practice</li> </ul> |

### **Management**

| <b>Issues</b>                          | <b>Strategic Implications</b>  | <b>Possible measures</b>   |
|--|--|--|
| Enforcement of legislation             | <ul style="list-style-type: none"> <li>▪ Without enforcement legislation becomes meaningless.</li> <li>▪ Many important issues have already been addressed in legislation</li> </ul> | <ul style="list-style-type: none"> <li>▪ Include legislation in awareness raising and create a culture of adherence to legislation.</li> <li>▪ Government support for enforcement</li> <li>▪ Law enforcement</li> </ul>                              |
| Lack of infrastructure and maintenance | <ul style="list-style-type: none"> <li>▪ Loss of functionality</li> <li>▪ Opportunity cost</li> <li>▪ Wasted investment</li> <li>▪ Project failures</li> </ul>                       | <ul style="list-style-type: none"> <li>▪ Participatory engagement in the development of programmes</li> <li>▪ Funding must include a maintenance plan</li> <li>▪ Awareness raising</li> <li>▪ Capacity building in respective maintenance</li> </ul> |
| Lack of capacity                       | <ul style="list-style-type: none"> <li>▪ Failure to implement plans</li> </ul>   | <ul style="list-style-type: none"> <li>▪ Training</li> <li>▪ Development of guidelines</li> </ul>  |
| Lack of finance                        | <ul style="list-style-type: none"> <li>▪ Inability to implement plans</li> </ul>   | <ul style="list-style-type: none"> <li>▪ Fund-raising</li> <li>▪ Proposal writing</li> <li>▪ Practical, reasonably and visibly sustainable plans</li> </ul>  |
| Poor monitoring                        | <ul style="list-style-type: none"> <li>▪ Without monitoring there can be no management</li> </ul>  | <ul style="list-style-type: none"> <li>▪ Develop M&amp;E Programme</li> <li>▪ Prioritise monitoring activities</li> <li>▪ Training</li> </ul>  |

#### **5.2.1 Analysis of Issues**

These issues and first possible measures can be embedded into a wider context clarifying the broader situation in the Awoja Catchment. An analysis of the strengths, weaknesses, opportunities and threats (SWOT) of the Awoja Catchment Table 5-3 gives a comprehensive picture. The threats are at the same time driving factors for the state of the water resources and the situation in which the population has to earn its livelihoods.

Table 5-3: Catchment SWOT Analysis

|  |   |
|--|---|
| <b>STRENGTHS</b>   | <b>WEAKNESSES</b>   |
| <ul style="list-style-type: none"> <li>▪ Available water (surface water and groundwater)</li> <li>▪ Favourable climate</li> <li>▪ Suitable land</li> <li>▪ Willing farmers</li> <li>▪ Extensive wetlands</li> <li>▪ Extensive natural areas</li> <li>▪ Rainfed cropping is possible</li> <li>▪ Good environmental legislation</li> </ul> | <ul style="list-style-type: none"> <li>▪ High levels of poverty</li> <li>▪ Erosive soils</li> <li>▪ Poor transport infrastructure</li> <li>▪ Lack of electricity</li> <li>▪ Very little development/weak infrastructure</li> <li>▪ No significant towns</li> <li>▪ Distance to markets</li> <li>▪ No significant dams/no obvious dam sites</li> <li>▪ Lack of maintenance of infrastructure</li> <li>▪ Non-payment for services</li> <li>▪ Poor enforcement</li> <li>▪ Very limited monitoring; no data for planning</li> </ul> |
| <b>OPPORTUNITIES</b>   | <b>THREATS</b>  |

## 5.3 Vision and strategic objectives

### 5.3.1 Vision

To develop a common direction and understanding for a sustainable, integrated management and development of Awoja for the socio-economic benefit of its people and its environment in light of the current situation, a vision for the catchment and strategic objectives in support of the vision were developed by working groups of the participants at the stakeholder workshop in Soroti on 18th July 2013. The process took into account the issues, strategic implications and catchment driving factors.

The vision for the Kyoga WMZ had earlier been formulated (NELSAP, 2012) and is included here to ensure synchronisation with the catchment vision. The WMZ vision is:

#### ***Vision for the Kyoga WMZ***

*To ensure that by 2035, water resources development and management investments in the Lake Kyoga basin are integrated and optimised across a wide range of economic sectors leading to poverty reduction and improved livelihoods.*

The proposed visions from the Awoja stakeholder workshop groups were:

1. A healthy, wealthy community in a secure and sustainable environment by 2040
2. A catchment with adequate water and environmental resources for socio-economic needs of present and future generations
3. A productive, healthy and sustainably utilised Awoja Catchment Area; and
4. A dignified community living in a sustainable ecosystem.

Bringing the key elements of all of the above visions together encapsulated the following catchment vision:

### **Awoja Catchment Vision**

*Sustainably manage and utilise the water resources and related sources of the Awoja catchment by 2040.*

#### **5.3.2 Strategic Objectives**

To achieve the above vision the objectives put forward by the Awoja Catchment representatives at the stakeholder workshop of 18th July 2013 in Soroti were as follows:

*To meet community needs for water and food security:*

1. To provide safe and clean water
2. To improve on productivity and production for food security
3. To promote water harvesting technologies.

*And to ensure the sustainable capacity of the Awoja Catchment to provide for these needs by:*

4. Promoting sustainable use of Awoja's wetlands
5. Promoting soil and water conservation practices
6. Promoting mitigation measures for drought and floods
7. Increasing forest cover in the catchment.

*And to engage with both government and community in implementing the following strategies:*

8. Building the capacity of stakeholders in integrated water resource management
9. Promoting manageable family sizes
10. Promoting community awareness on environmental management
11. Providing alternative sources of energy so as to protect the environment
12. Enforcing existing policy regulations
13. Revitalising institutional capacities
14. Peace building and conflict resolution among communities.

*With approaches to include:*

- Creating opportunities for alternatives; lobbying and advocacy
- Introducing modern agricultural technologies and techniques in the catchment.

The management and development of water resources must be of benefit to the improvement of the socio-economic development of the catchment in a sustainable manner now and in the future. Although energy was not highlighted specifically by stakeholders, the consequences such as deforestation necessitated the inclusion of energy needs in the strategic objectives. This improvement of benefits and service delivery through IWRM provides broad strategic catchment objectives.

The strategic catchment objectives proposed by stakeholders were synthesised, encapsulating the key elements, and refined to generate four strategic objectives for the Awoja Catchment, *Table 5-4*.

*Table 5-4: Strategic objectives of the Awoja Catchment*

|   |
|---|
| <b>1. Catchment Protection and Conservation:</b>  |
| To protect and restore the catchment for sustainable delivery of goods and services                                       |
| <b>2. Development for Socio-Economic Growth:</b>  |
| To develop water resources for socio-economic growth through meeting community needs for water, energy, and food security |
| <b>3. Mitigation and Adaptation:</b>  |
| To mitigate and adapt to the impacts of droughts, floods, and landslides  |
| <b>4. Social and Institutional Development:</b>   |
| To optimise catchment resources through capacity building, awareness, policy enforcement and institutional coordination   |

Both the vision and the objectives for the Awoja Catchment were discussed and validated in the stakeholder workshop on 14th- 15th May 2014.

#### **5.4 Identification of potential options**

Options are possible measures/interventions used to address (a) given issue(s) or problem(s) in a catchment, and they can be management and development in nature.

It is fundamental to the catchment planning process that options derived from the catchment issues for the sustainable development of the catchment are in line with its vision and objectives.

A range of potential options to consider in the catchment plan was collated from stakeholder interviews, workshops, Awoja CMP supporting assessments, literature as well as the Terms of Reference for the development of the Awoja CMP. This long-list of options included a number of specific development options put forward by stakeholders. Stakeholder preferences noted during the stakeholder engagement undertaken in the selection of districts and sub-counties within the catchment were also added to the long list.

Many actions are already being undertaken to address water resource, catchment management and livelihood issues – by Government departments, districts, NGOs, and other institutions. Others are planned by various institutions and/or organisations. Thus, the Framework Management Plan for the Awoja Wetlands System as well as the National Faecal Sludge Assessment for Small Towns in Uganda by the World Bank have been considered. Some activities were added to the long list of options.

Following careful evaluation of the potential options in the ‘long list’ in light of the catchment vision and objectives as well as practical considerations, the long-list of options was condensed into a more manageable list for screening and evaluation, the so-called ‘short-list’ taking into account needs, practicality and viability. These potential options were arranged according to the strategic objectives of the Awoja catchment, *Table 5-5*.

**Table 5-5: Management and Investment Options**

| No  | 1. Catchment Protection and Conservation      |
|-----|---|
| 1.1 | Sustainable land and environmental management |
| 1.2 | Reforestation                                 |
| 1.3 | Lakes and Wetlands management                 |
| 1.4 | Buffer zone set-asides                        |

| No   | 2. Development for Socio-Economic Growth   |
|------|--|
| 2.1  | Sanitation systems   |
| 2.2  | Refurbishment of infrastructure  |
| 2.3  | Piped water schemes (Surface water)  |
| 2.4  | Groundwater development  |
| 2.5  | Rainwater harvesting (Roof water tanks and roof catchments)  |
| 2.6  | Sand dams  |
| 2.7  | Dams <ul style="list-style-type: none"> <li>a. Small stock watering dams</li> <li>b. Valley dams and tanks</li> <li>c. Large dams</li> </ul> |
| 2.8  | Enhancement of irrigation  |
| 2.9  | Water use efficiency   |
| 2.10 | Small hydropower   |
| 2.11 | Alternative energy supply  |
| 2.12 | Aquaculture  |
| 2.13 | Socio-economic strengthening   |

| No  | 3. Floods, Droughts and Landslides Mitigation and Adaptation |
|-----|--|
| 3.1 | Flood management and preparedness for floods                 |
| 3.2 | Construction of infrastructure for flood control             |
| 3.3 | Cattle keeping practices                                     |
| 3.4 | Climate Smart Fisheries and Aquaculture development          |
| 3.5 | Greenhouse Gas Monitoring                                    |

| No  | 4. Social and Institutional Development       |
|-----|---|
| 4.1 | Monitoring                                    |
| 4.2 | Extension services (information and training) |
| 4.3 | Awareness raising                             |
| 4.4 | Institutional capacity building               |
| 4.5 | Legislation and enforcement                   |
| 4.6 | Governance and framework management plans     |
| 4.7 | Risk management                               |

Since the options are very broad and general, sub-options (implementation actions) were identified which are specific, suitable and tailored to the different areas in Awoja and contribute to achieve the objectives. They are described in *Table 5-6: Catchment Protection and Conservation Options* to *Table 5-9: Social and Institutional Development Options* grouped according to the catchment objectives and options as shown in *Table 5-5: Management and Investment Options*. For each sub-option, the catchment functions are described, followed by the specific actions identified for each option.

**Table 5-6: Catchment Protection and Conservation Options**

| <b>1.1 Sustainable Land and Environmental Management</b>   |
|--|
| Constructing the building blocks for a catchment-wide soil and water conservation programme. Building blocks include establishing an alliance of local, national, and international soil and water conservation organisations that can offer support. Catchment protection, soil and water conservation and sustainable land and environmental management are almost synonymous terms, with Sustainable Land and Environmental Management best embracing the approach of a landholder-driven movement towards responsible management aimed at both protecting the environment and improving productivity. From this common understanding the next task is to develop an appropriate set of principles for sustainable land and environmental management, guidelines and practices. |
| Implementation of a comprehensive integrated catchment management project directed at both source protection and improved farm production over the planning period. Although principally landholder driven this will require significant state support in training, farm planning support, conservation works, tree planting and managing protection zones. The identified sub-options are:  |
| 1.1.1 The preparation and dissemination of a comprehensive Sustainable Land Management manual providing the technological approaches tailored for the Awoja Catchment and Kyoga WMZ.   |
| 1.1.2 Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning.   |
| 1.1.3 Identification and regular (annual) eradication of floating islands / invasive alien plants.   |
| 1.1.4 Development of a fire risk, fire control and fire protection plan with controlled burning where required for grazing and biodiversity management.  |
| 1.1.5 Riverbank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation.   |
| 1.1.6 Rehabilitation of degraded landscapes through construction of check dams, demi-lunes, swales, brush packs and stone packs and fanya juu etc.   |
| 1.1.7 On-farm rainwater harvesting - channeling of overland flow and excess runoff into underground storage tanks for household water excluding drinking and irrigation.   |
| 1.1.8 Ecological water requirements: revisiting legislation and catchment assessment.  |
| 1.1.8.1 Introduction of improved farming practices.  |
| 1.1.9 Build the capacity on conservation methods, especially for wetlands.   |
| 1.1.10 Monitoring the impacts of sustainable land management in terms of improved farming practices (individual benefit) and downstream water management.  |
| 1.1.11 Develop and implement climate change awareness creation strategy addressing sustainable land and environment management   |
| 1.1.12 Promote climate change planning across and among sectors at catchment and sub-catchment levels.   |
| 1.1.13 Promote climate smart integrated landscape management approaches  |
| 1.1.14 Promote uptake of disaster risk reduction and climate change tools for joint planning and implementation of sustainable land and environment technologies and practices at all levels.  |
| 1.1.15 Build capacity of land and environment users by supporting them in land suitability mapping, land use and farm planning, soil health improvement and soil & water conservation activities in micro and macro watersheds.  |

## **1.2 Reforestation**

Establish a catchment team responsible for forest protection, re-establishment and management. Create awareness relating to the sustainable management and utilisation of remaining wood resources. Demarcate vulnerable areas for protection and suitable areas to promote woodlots and small plantations, including riparian and roadside buffer zones. Develop and implement forestry management plans for surviving resources.

- 1.2.1 Provide routine training (forestry handbook) to CMCs, forest management, land care and agricultural managers.
- 1.2.2 Establish nurseries for provision of seedlings and establish distribution, training and management systems - pilot projects.
- 1.2.3 Support the implementation of a Reforestation Programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land and environmental management.
- 1.2.4 Plant trees in degraded areas.
- 1.2.5 Promote woodlots and suitable climate smart agroforestry systems.
- 1.2.6 Promote use of practices for managed regeneration of trees to increase tree cover in degraded catchment and sub-catchment areas.
- 1.2.7 Establish Community forest management groups
- 1.2.8 Promote forest law enforcement and governance
- 1.2.9 Strengthen forest institutions responsible for forest management and development.

## **1.3 Lakes and Wetlands management**

Promote the guidelines on optimal utilisation of wetlands compiled by the Wetlands Department and implement the Framework Management Plan for Awoja Wetland System. Assemble information on the socio-economic and ecological values of Awoja's wetlands and use this knowledge in promoting awareness and the protection of wetlands. Monitor compliance with wetlands policy and legislation. Wetlands need to be very precisely mapped and zoned for protection and management purposes. Wetland Management and Action Plans must be implemented, potentially including putting enabling or supplementary legislation in place.

- 1.3.1 Regular updating of district wetland inventories by districts.
- 1.3.2 Updating of demarcated protection zones and acceptable utilisation of wetlands, producing GIS maps of wetlands at various levels.
- 1.3.3 Study for the economic valuation of wetland resources and disseminate the results.
- 1.3.4 Restoration of vital (unique) critical (subject to on-going degradation) wetlands.
- 1.3.5 Implement wetland management/action plans.
- 1.3.6 Enhance wetlands and lake systems through integrated watershed management
- 1.3.7 Promote payment for ecosystem services for enhanced ecosystem management and benefits.

## **1.4 Buffer zone set-asides**

Prepare policy for roadside buffer zones, adopt and implement it. Identify all important catchment rivers requiring riparian buffer zones and implement existing protection policy. Map roadside buffer zones and implement protection policy.

- 1.4.1 Mapping and demarcation of riparian and roadside protection zones and identify and implement source protection measures. Zone widths should be flexible to accommodate different physical and social economic circumstances and require independent mapping. Roadside protection zones can be allocated a set width and do not require mapping.
- 1.4.2 Identify and protect fragile ecosystems including steep slopes, river banks, fish breeding areas and wetlands.

*Table 5-7: Catchment Protection and Conservation Options*

## **2.1 Sanitation Systems**

Build internal expertise in approaches to sanitation. Support local government in identifying the need for new sanitation or waste water treatment works. Monitor functionality of existing works. Assist local government with planning and implement improved sanitation facilities for public facilities and meeting places - e.g. new ferry landing places constructed on Lake Bisina and Lake Opeta and village trading areas.

|   |
|---|
| <p>2.1.1 Improve sanitation technology, support building materials and implement activities.</p> <p>2.1.2 Improve faecal sludge management (collection, transportation, treatment, and re-use) through clustering of small towns (Kumi, Sironko, Kapchorwa, Nakapiripirit)</p> <p>2.1.3 Develop &amp; implement green management plans for business model innovations.</p> <p>2.1.4 Undertake carbon stock assessment</p>   |
| <b>2.2 Refurbishment of Infrastructure</b>  |
| <p>Situation assessment audit, preparation of an inventory and evaluation of need, cost and benefit of refurbishment. Prioritise infrastructure rehabilitation programmes and work with responsible authorities.</p> <p>2.2.2 Refurbishment of valley dams and valley tanks.</p> <p>2.2.3 Refurbishment of springs, boreholes, pumps, hand pumps and piped systems.</p> <p>2.2.4 Rehabilitation of those irrigation schemes where economically and socially justifiable. Bunamono and Labori (Soroti) schemes identified.</p>   |
| <b>2.3 Piped water schemes (Surface water)</b>  |
| <p>Through situation assessments ensure that responsible authorities effect efficient operation and management of piped water supply schemes. Identify feasible and necessary water supply projects.</p> <p>2.3.1 Design and construction of River Agu scheme to supply Kumi and surrounds - water and wastewater works.</p> <p>2.3.2 Soroti treatment and distribution - expand in stages.</p> <p>2.3.3 Identification, design and construction of further piped water schemes for growing towns and villages at regional growth centres, including supply to larger industries.</p>   |
| <b>2.4 Groundwater development</b>  |
| <p>Develop approaches, guidelines and standards for groundwater development for Awoja. Minimum standards are required for borehole casings, pumps and monitoring systems. Review situation with regard to existing groundwater infrastructure, functionality, groundwater quality and use. The WMZ will require a catchment groundwater database to include borehole data, water levels, quality and yields and Awoja data can be used to pilot and populate this.</p> <p>2.4.1 Feasibility studies of availability and supply for prioritised towns and settlements.</p> <p>2.4.2 Design and construction of groundwater schemes for towns / settlements.</p> <p>2.4.3 Groundwater schemes / boreholes for domestic and livestock supply - evaluation, design and construction (focus on Districts 1, 2 and 14).</p> |
| <b>2.5 Rainwater harvesting - (Roof water tanks and roof catchments)</b>  |
| <p>Introduce appropriate low-cost rainwater harvesting technologies to harvest and store water for multiple use during dry seasons. Local government and NGOs to be made aware of the importance and value of rainwater harvesting as water supply technology.</p> <p>2.5.1 Provision of subsidised rainwater tanks to willing buyers. Implementation should be based on a cost-sharing mechanism.</p>  |
| <b>2.6 Sand dams</b>  |
| <p>Facilitate the introduction of sand dams in the drier districts of Awoja (e.g. Nakapiripirit, Amudat, and Napak). Undertake needs identification for location of sand dams and associated abstraction facilities. Prioritise projects together with implementing agencies.</p> <p>2.6.1 Feasibility studies and design of prioritised sand dams. Construction with cooperation and input from local communities.</p>   |
| <b>2.7 Dams (Small stock watering dams, valley dams and tanks, large dams)</b>  |
| <p>Facilitate the identification, evaluation and construction of dams, either for stock watering or for domestic/industrial water supply. This could range from small stock watering dams, valley dams, valley tanks or multi-purpose dams.</p> <p>2.7.1 Needs identification for location and type of dams and associated abstraction facilities.</p> <p>2.7.2 Feasibility and design of prioritised dams for stock watering and human needs. Construction with cooperation and input from local communities.</p>  |

## **2.8 Enhancement of irrigation**

MWE to assess the allocable volumes of water for each river system and manage with permit system.

The CMC / WMZ must promote best management practices amongst irrigators to prioritise catchment protection (Sustainable land and environmental management) to reduce erosion. Provide guidelines so that all irrigation farms, especially those on slopes, are designed to sustainable land and environmental management principles (maximising infiltration and minimising runoff) thus optimising the benefits of rainfall.

- 2.8.1 Provide farmers with appropriate technologies for the abstraction of water from rivers and shallow boreholes. This would include facilitating access to treadle pumps and small motorised pumps and the construction of small diversion weirs. Prioritise the drier areas of Kapchorwa and Kween on the leeward side of Mount Elgon, Karamoja, and Teso.
- 2.8.2 Enhancement of rainfed agriculture.
- 2.8.3 New irrigation schemes: undertake feasibility studies of identified areas.
- 2.8.4 Construction of new irrigation schemes: Improved (seasonal) Wetland Schemes.
- 2.8.5 Construction of new irrigation schemes: Low-power pumped schemes that utilise water from nearby rivers, swamps and lakes.
- 2.8.6 Construction of new irrigation schemes: Simple gravity-fed schemes
- 2.8.7 Construction of new irrigation schemes: Type A Formal Irrigation.
- 2.8.8 Construction of new irrigation schemes: Type B Formal Irrigation.

## **2.9 Water use efficiency**

Provide water efficiency targets. Promoting changes in crops or cropping patterns. Review losses in transference of water (leaking pipes, canals, off-channel dams) and highlight the need for repairs by responsible authorities. Target irrigation schemes for efficiency of use. Include a water use efficiency requirement as a condition for new or renewed water allocations.

- 2.9.1 Water efficiency evaluation and recommendations (such as promoting changes in crops or cropping patterns, improving efficiency or water deficit management).

## **2.10 Small hydropower**

Determine status and progress with feasibility studies of small-scale hydropower schemes and make all information available.

- 2.10.1 Investment and implementation in hydropower installations and grid distribution.

## **2.11 Alternative energy supply and energy efficiency**

Promote the planting of woodlots for fuelwood (forestry and agroforestry).

- 2.11.1 Promote additional and alternative sources of energy including low cost solar panels to be used for LED lighting, radios, and cell phones.
- 2.11.2 Promote use of energy efficient woodstoves by making the technology readily available.

## **2.12 Aquaculture**

Determine the extent of aquaculture practice – both past and present, and determine reasons for the decline in fish farming. Identify additional areas where aquaculture can profitably be implemented. Provide farmers/communities with guidelines on aquaculture through the extension process.

- 2.12.1 Develop a manual on aquaculture techniques (building on available material).
- 2.12.2 Assist farmers with the rehabilitation of viable aquaculture ponds and in the construction of new ponds - allowance made for a pilot.
- 2.12.3 Train and assist farmers on the appropriate fishing techniques and equipment as well as the protection of breeding grounds

*Table 5-8: Floods and Droughts Mitigation options*

| <b>3.1 Flood management and preparedness for floods</b>   |
|---|
| Raise awareness of all residents of flood prone areas of the risk of flooding.  |
| 3.1.1 Demarcate areas considered unsafe for habitation or other use and warn inhabitants.   |
| 3.1.2 Development of an early flood warning system.   |
| 3.1.3 Development/Compilation of a hazard/risk map for landslides/sedimentation/floods.   |
| <b>3.2 Construction of infrastructure for flood control</b>   |
| Develop an implementation policy on the use of levees or embankments to prevent the flooding of wetlands. It is recommended that levees be disallowed except in situations where existing development and the potential loss of life renders this imperative. |
| 3.2.1 Plan and implement flood retention structures with cooperation and input from local communities.  |
| 3.2.2 Plan and construct levees in areas where this can have optimal benefit with minimal disadvantage to users further downstream, with cooperation and input from local communities.  |
| 3.2.3 Assess structures within flood prone areas (roads, bridges, culverts) and their resistance to flooding. Then strengthen roads, bridges and culverts for better flood resistance and ensure that escape routes are not cut off.                          |
| <b>3.3 Cattle keeping practices</b>   |
| Review drought hazards for stock farming, taking note of good land management strategies currently adopted by cattle farmers in dealing with droughts and promoting it among stock farmers.   |
| 3.3.1 Determine current stocking rates and assess carrying capacity of all districts. Develop a plan to keep the numbers of animals within the theoretical limits of carrying capacity.   |
| 3.3.2 Livestock improvement programme.  |
| 3.3.3 Promote dairy farming.  |

*Table 5-9: Social and Institutional Development Options*

| <b>4.1 Monitoring</b>   |
|---|
| Establish strong principles regarding the importance of monitoring and ensure that long-term funding is available to maintain a monitoring programme. Review existing water quantity and quality monitoring sites, their functionality, and how data is being captured, transferred, checked, stored and reported. A data base and data management system must be built at WMZ level. |
| 4.1.1 Monitoring stations must be maintained and regularly calibrated. Gauge readers need to be trained and check mechanisms introduced to ensure stability and consistency in data.  |
| 4.1.2 Expand, rehabilitate and improve the water quality, evaporation, rainfall, groundwater and stream flow monitoring network systems and lake and wetland water-level monitoring gauges. Implement sedimentation monitoring.   |
| 4.1.3 Monitor surface and groundwater use and levels to prevent over-exploitation.  |
| <b>4.2 Extension services (information and training)</b>  |
| Identify the needs of extension service providers, improve the quality of their work by training extension service providers, and developing support material.  |
| 4.2.1 Train a committed cadre of extension service providers to render inter-disciplinary, integrated extension service including CMCs, CBOs etc.   |
| 4.2.2 Develop support materials for use by extension officers (building on currently available material).   |

#### **4.3 Awareness raising**

Assess current awareness raising initiatives and synergies between projects and institutions. Raise awareness of key stakeholders and the public on an ongoing basis. A range of awareness raising/stakeholder engagement required.

4.3.1 Develop training guidelines and awareness raising materials (building on currently available material).

4.3.2 Introduction of a community radio programme dedicated to environmental matters.

4.3.3 Sanitation project. Demonstration of ecosan and other sanitation systems. Provision of appropriate designs and training in construction. Support with provision of materials.

4.3.4 Implement demonstration projects - schools, model farms etc. (capital costed elsewhere).

4.3.5 Introduction of awareness raising programmes in schools.

#### **4.4 Institutional capacity building**

Review capacity and capacity constraints amongst relevant institutions. Build internal capacity through interaction and training.

4.4.1 Import expertise in the development of technology guidelines, training and other approaches.

4.4.2 Enhance and strengthen the capacity of BMUs.

4.4.3 Enhance and strengthen the capacity of rice grower associations.

#### **4.5 Legislation and enforcement**

Optimise awareness raising to minimise need for enforcement. Create a culture of people based land management and 'peer pressure enforcement' through awareness, a common vision and through reasonable action by authority.

4.5.1 Strengthen enforcement bodies with capacity, following identification of enforcement areas with the biggest needs. Develop specific tasks and roles for law enforcement but with recognition of IWRM and crosscutting responsibilities. Enforcement bodies should be trained in teaching corrective practices.

### **5.5 Evaluation of Shortlisted Options**

Investment schemes should be evaluated in terms of their technical features and likely feasibility, estimated cost, reduction of risk, socio-economic and environmental considerations and other benefits and impacts, to at least a minimum base of information.

#### *5.5.1 Off-Line Screening of Options*

The management and development options, one with which all stakeholders could engage, need to be prioritised since some play a much more important role for the development and protection of the catchment than others and not all the options can be implemented at the same time. Furthermore, some options need to be piloted in order to evaluate their success and impact before the activity will be transferred to other areas of the catchment. Additionally, the different sub-catchments or districts have different needs and, therefore, different priorities. For this reason, an off-line screening tool was developed for the prioritisation of options. It provides a mechanism for the screening of options by the selection of weights against social, environmental, and economic screening criteria. In this regard, a scoring process was developed and the scores were allocated to different options.

However, the scores remain subjective, but in presence of good information about the options together with knowledgeable people applying the criteria, results become less subjective. This leads to an informed opinion on options, based on best understanding of the water resource situation and the social, environmental and economic circumstances prevailing.

Options are evaluated against a defined set of criteria, based on available information, which reflect the vision and objectives of the Awoja Catchment. During this process discussions and consensus are important means to avoid unreasonable subjectivity and strengthen transparency. The developed screening criteria and the respective associated scores are shown in *Table 5-10*.

*Table 5-10: Screening criteria and impacts of the scores*

| Criterion |   | Impact  | Score |
|-----------|---|---|-------|
| 1         | Overall impact of option  | Addresses one issue                                 | 1     |
|           |   | Addresses 2 - 3 issues                              | 3     |
|           |   | Addresses more than 3 issues                        | 5     |
| 2         | Importance of issue(s) addressed  | Low   | 1     |
|           |   | Medium  | 3     |
|           |   | High  | 5     |
| 3         | Social Benefit  | Low   | 1     |
|           |   | Medium  | 3     |
|           |   | High  | 5     |
| 4         | Economic benefit  | Low   | 1     |
|           |   | Medium  | 3     |
|           |   | High  | 5     |
| 5         | Environmental cost (-ve)  | High negative impact                                | -5    |
|           |   | Minimal negative impact                             | -3    |
|           |   | No impact   | 0     |
| 6         | Environmental benefit (+ve)   | No impact   | 0     |
|           |   | Minimal positive impact                             | 3     |
|           |   | High positive impact                                | 5     |
| 7         | Opportunity costs (if any) (i.e. loss of opportunity to others as consequence of the development) | Very high   | -3    |
|           |   | High  | -2    |
|           |   | Limited   | -1    |
|           |   | None  | 0     |
| 8         | Ease of implementation (physical feasibility)   | Very difficult                                      | -3    |
|           |   | Difficult   | -2    |
|           |   | Feasible / possible                                 | 2     |
|           |   | Very feasible                                       | 3     |
| 9         | Cost / affordability  | Prohibitive   | -5    |
|           |   | Very expensive                                      | -3    |
|           |   | Expensive   | -1    |
|           |   | Reasonably affordable                               | 3     |
|           |   | Very affordable                                     | 5     |
| 10        | Capacity to implement   | None / inadequate                                   | -3    |
|           |   | Weak  | -2    |
|           |   | Capacity to be built / recruited                    | -1    |
|           |   | Limited capacity                                    | 1     |
|           |   | Good – available                                    | 3     |
| 11        | Consequences of failure to implement (reflect urgency of action)                                  | None. Issue(s) will resolve naturally over time     | -3    |
|           |   | Issue(s) increase but remain at same relative scale | 0     |
|           |   | Escalation of issue(s)                              | 3     |
| 12        | Sustainability  | Definite long-term sustainability                   | 5     |
|           |   | Sustainable   | 3     |
|           |   | Uncertain - it depends                              | 0     |
|           |   | Short-term only                                     | -3    |
|           |   | Most unlikely                                       | -5    |

The off-line criteria are mapped to the catchment objectives as indicated in *Table 5-11: Off-line criteria mapped to the catchment objectives*

*1 Note that some off-line criteria have been mapped against more than one objective.* This shows that the criteria address all catchment objectives dealing with all options.

**Table 5-11: Off-line criteria mapped to the catchment objectives**

| Catchment objective  | Off-line Criteria <sup>1</sup>   |
|--|--|
| 1. Catchment Protection and Conservation:<br>To protect and restore the catchment for sustainable delivery of goods and services                                       | <ul style="list-style-type: none"> <li>▪ Overall impact of option</li> <li>▪ Environmental cost</li> <li>▪ Environmental benefit</li> <li>▪ Sustainability</li> </ul>  |
| 2. Development for Socio-Economic Growth:<br>To develop water resources for socio-economic growth through meeting community needs for water, energy, and food security | <ul style="list-style-type: none"> <li>▪ Social Benefit</li> <li>▪ Economic benefit</li> <li>▪ Opportunity costs</li> <li>▪ Ease of implementation (physical feasibility)</li> <li>▪ Cost / affordability</li> </ul> |
| 3. Mitigation and Adaptation: To mitigate and adapt to the impacts of droughts, floods and landslides  | <ul style="list-style-type: none"> <li>▪ Social Benefit</li> <li>▪ Economic benefit</li> <li>▪ Ease of implementation (physical feasibility)</li> <li>▪ Cost / affordability</li> </ul>                              |
| 4. Social and Institutional Development:<br>To optimise catchment resources through capacity building, awareness, policy enforcement, and institutional coordination   | <ul style="list-style-type: none"> <li>▪ Capacity to implement</li> </ul>  |
| All 4 objectives   | <ul style="list-style-type: none"> <li>▪ Importance of issue(s) addressed</li> <li>▪ Consequences of failure to implement (reflects urgency of action)</li> </ul>  |

*1 Note that some off-line criteria have been mapped against more than one objective*

The approach outlined above was used for screening the options, both investment options and management options using criteria, which cover a set of economic, environmental and social indicators. Options are screened to assess and evaluate the technical features, likely feasibility, estimated costs, reduction of risk, social economic, environmental considerations, and other benefits and impacts. The criteria take into account the number of prioritised issues addressed by an option.

Annex 1 shows the results of the screening of all the options in line with the four objectives.

## 5.6 From Options to Scenarios

The Guidelines for Catchment-based water resources planning in Uganda define a scenario as "a combination of assumptions about the options in place (which options are possible or assumed to be implemented); external factors that influence their performance (climate, economic conditions etc.); projections or forecasts of the future (population growth rate, urbanisation rate, agricultural productivity, water use or demand rates, economic parameters, etc.); and government policy effecting either selection or performance (priority, funding, regulations, institutional arrangements etc.)." Catchment scenarios are especially useful to provide perspective on development prospects and their impacts. Scenarios are, therefore, combinations of options.

These options cannot be seen separately from each other. They are all interrelated - tied into a complex web by the high population growth and the resultant increasing need to draw on the natural resources offered by the catchment. Some options may influence each other, some may depend on one another, some may be more important to some stakeholders than to others in the diverse areas of the catchment. This variety of options needs

structuring about possible future resource development opportunities, their risks, and their interactions.

By considering the various options and regrouping them, different scenarios are created focusing on topics. These are useful to provide a perspective on development prospects and their impacts. The question to be asked is what should be focused on in the development of the water resources and their protection during the coming years. Some options will have a more significant role to play than others, which should not be neglected and just assume a minor/border position. Another question to be dealt with is: which impact is created by different scenarios. The scenarios produce alternative pictures of the future based on the identified driving forces and allow for the planning of projects and actions to suit a desired or realistic future accommodating a certain level of uncertainty. Then the positive and negative effects need to be taken into consideration. The scenarios should further reflect the objectives and thus the vision and thereby meet the projected demands of the various water use sectors at specified levels of growth and development.

The biggest underlying issue is land pressure, resulting from population growth - with consequent land degradation, siltation and sedimentation. Scenarios were formulated taking into account the Awoja planning objectives and the vision. In this respect three scenarios were developed:

- **SC1:** Mitigation of floods through riverbank protection (focusing on structural measures),
- **SC2:** Reliable water supply to the users,
- **SC3:** Protect the environment through improved soil and water conservation.

The three scenarios were then compared using the ranked options and the objective functions of the scenarios. These are three different ways of meeting all the planning objectives while trying to maximise the objective function in each case. For example, scenario one addresses all the objectives while concentrating on the objective function of structural measures to mitigate floods through riverbank protection.

Having compared the three scenarios, SC3 (Protect the environment through improved soil and water conservation) emerged the best screened scenario with the highest score *Table 5-12*.

*Table 5-12: Comparison of the screening results of the 3 scenarios*

|       | Options   | SC1 | SC2 | SC3 |
|-------|---|-----|-----|-----|
| 1.1.1 | The preparation and dissemination of a comprehensive Sustainable Land and Environmental Management manual providing the technological approaches tailored for the Awoja Catchment and Kyoga WMZ.  | 25  | 25  | 25  |
| 1.1.2 | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning |     |     | 25  |
| 1.1.3 | Identification and regular (annually) eradication of floating islands / invasive alien plants   | 31  | 31  | 31  |
| 1.1.4 | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | 24  |     | 24  |
| 1.1.5 | Riverbank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation   | 19  | 19  | 19  |
| 1.1.6 | Rehabilitation of degraded landscapes through construction of check dams, demi-lunes, swales, brush packs and stone packs, fanya juu (Swahili for 'throw soil up' terraces, which are good for fodder grass that prevents soil erosion) etc.            | 26  | 26  |     |
| 1.1.7 | On-farm rainwater harvesting - channelling of overland flow and excess runoff into underground storage tanks for irrigation and household water excluding drinking  |     | 35  |     |

|         | <b>Options</b>   | <b>SC1</b> | <b>SC2</b> | <b>SC3</b> |
|---------|--|------------|------------|------------|
| 1.1.8   | Ecological water requirements: revisiting legislation and catchment assessment   | 26         | 26         | 26         |
| 1.1.8.1 | Introduce improved farming practices   |            |            | 37         |
| 1.1.9   | Build the capacity on conservation methods, especially for wetlands  | 26         | 26         | 26         |
| 1.1.10  | Monitoring the impacts of sustainable land and environmental management in terms of improved farming practices (individual benefit), and downstream water management   |            |            | 8          |
| 1.2.1   | Provide routine training (forestry handbook) to CMCs, forest management, landcare and agricultural managers: one training in each district every two years   |            |            | 18         |
| 1.2.2   | Establish nurseries for provision of seedlings and establish distribution, training and management systems in all districts - pilot projects   |            |            | 28         |
| 1.2.3   | Support the implementation of a Reforestation Programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land management |            |            | 25         |
| 1.2.4   | Plant trees in degraded areas  | 31         |            | 31         |
| 1.3.1   | Regular updating of district wetland inventories by Districts  |            | 22         | 22         |
| 1.3.2   | Updating of demarcated protection zones and acceptable utilisation of wetlands, producing GIS maps of wetlands at various levels   |            | 19         | 19         |
| 1.3.3   | Study for the economic valuation of wetland resources and disseminate the results  |            | 20         | 20         |
| 1.3.4   | Review and update the wetland management/action plans  | 17         | 17         | 17         |
| 1.3.5   | Restoration of vital (unique) critical (subject to on-going degradation) wetlands  |            |            | 15         |
| 1.4.1   | Mapping, demarcation of riparian and roadside protection zones, and identify & implement source protection measures  | 9          | 9          | 9          |
| 2.1.1   | Improve Sanitation technology, and building material support and implement them  | 31         | 31         | 31         |
| 2.1.2   | Improve faecal sludge management (collection, transportation, treatment and re-use) through clustering of small towns (Kumi Sironko, Kapchorwa, Nakapiripirit)   |            |            | -1         |
| 2.2.2   | Refurbish valley dams and tanks  | 23         | 23         | 23         |
| 2.2.3   | Refurbish Springs, boreholes, pumps, hand pumps and piped systems  |            | 25         |            |
| 2.2.4   | Rehabilitate those irrigation schemes where economically and socially justifiable. Bunamono and Labori schemes identified  |            | 17         |            |
| 2.3.1   | Design and construct River Agu scheme to supply Kumi and surrounds - water and wastewater works  |            | 12         | 12         |
| 2.3.2   | Soroti treatment and distribution - expand in stages (NWSC)  |            | 12         | 12         |
| 2.3.3   | Identify, design, and construction of further piped water schemes for growing towns and villages at regional growth centres, including supply to larger industries   | 12         | 12         |            |
| 2.3.4   | Groundwater schemes/boreholes for domestic and livestock supply - evaluation, design, construction (focus on Districts 1,2 and 14)   |            | 25         |            |
| 2.4.1   | Feasibility studies of availability and supply for prioritised towns and settlements   |            | 25         |            |
| 2.4.2   | Design and construction of groundwater schemes for towns/settlements   |            | 24         |            |
| 2.5.1   | Provision of subsidised rainwater tanks to willing buyers. Implementation should be based on a cost-sharing mechanism  |            | 32         |            |
| 2.6.1   | Feasibility studies and design of prioritised sand dams. Construction, with cooperation and input from local communities   | 26         | 26         | 26         |

|        | <b>Options</b>   | <b>SC1</b> | <b>SC2</b> | <b>SC3</b> |
|--------|--|------------|------------|------------|
| 2.7.1  | Needs identification for location and type of dams and associated abstraction facilities   | 30         | 30         | 30         |
| 2.7.2  | Feasibility & design of prioritised dams for stock watering and human needs. Construction, with cooperation and input from local communities   |            | 21         | 21         |
| 2.8.1  | Provide farmers with appropriate technologies for the abstraction of water from rivers and shallow boreholes. This would include facilitating access to treadle pumps and small motorised pumps and the construction of small diversion weirs. Prioritise the drier areas of Kapchorwa and Kween on the leeward side of Mt. Elgon, Karamoja and Teso |            | 17         |            |
| 2.8.2  | Enhancement of rainfed agriculture   | 31         | 31         | 31         |
| 2.8.3  | New irrigation schemes: undertake feasibility studies of identified areas  | 10         | 10         | 10         |
| 2.8.4  | Construction of new irrigation schemes: Improved (seasonal) Wetland Schemes  | 7          | 7          | 7          |
| 2.8.5  | Construction of new irrigation schemes: low-power pumped schemes that utilise water from nearby rivers, swamps and lakes   | 20         | 20         | 20         |
| 2.8.6  | Construction of new irrigation schemes: simple gravity-fed schemes   | 20         | 20         | 20         |
| 2.8.7  | Construction of new irrigation schemes: Type A Formal Irrigation   | 8          | 8          | 8          |
| 2.8.8  | Construction of new irrigation schemes: Type B Formal Irrigation   | 5          | 5          | 5          |
| 2.9.1  | Water efficiency evaluation and recommendations  | 24         | 24         | 24         |
| 2.10.1 | Investment and implementation in hydropower installations and grid distribution  | 24         | 24         | 24         |
| 2.11.1 | Promote additional and alternative sources of energy including low cost solar panels to be used for LED lighting, radios and cell phones   | 14         | 14         | 14         |
| 2.11.2 | Promote use of energy efficient woodstoves by making the technology readily available  |            |            | 29         |
| 2.12.1 | Develop a manual on aquaculture techniques (building on available material)  |            | 18         | 18         |
| 2.12.2 | Assist farmers with the rehabilitation of viable aquaculture ponds and in the construction of new ponds - allowance made for a pilot   |            | 16         | 16         |
| 2.12.3 | Train and assist farmers on the appropriate fishing techniques and equipment as well as the protection of breeding grounds   |            |            | 28         |
| 2.13.1 | Create an ecological tourism organisation, train it and provide the necessary starting equipment e.g. a boat   |            |            | 22         |
| 2.13.2 | Promote horticulture   |            |            | 15         |
| 2.13.3 | Promote bee keeping  |            |            | 17         |
| 3.1.1  | Demarcate areas considered unsafe for habitation or other use and warn inhabitants   | 36         |            | 36         |
| 3.1.2  | Develop an early flood warning system  | 13         | 13         | 13         |
| 3.1.3  | Development/Compilation of a hazard/risk map for landslides/ sedimentation/floods  | 22         | 22         | 22         |
| 3.2.1  | Plan and implement flood retention structures, with cooperation and input from local communities   | 30         |            |            |
| 3.2.2  | Plan and construct levees in areas where this can have optimal benefit with minimal disadvantage to users further downstream, with cooperation and input from local communities  | 9          |            |            |
| 3.2.3  | Assess structures within flood prone areas (roads, bridges, culverts) and their resistance to flooding. Then strengthen roads, bridges and culverts for better flood resistance and ensure that escape routes are not cut off  | 30         |            |            |
| 3.3.1  | Determine current stocking rates and assess carrying capacity of all districts. Develop a plan to keep the numbers of animals within the theoretical limits of carrying capacity   |            | 27         | 27         |

|       | <b>Options</b>  | <b>SC1</b>  | <b>SC2</b>  | <b>SC3</b>  |
|-------|---|-------------|-------------|-------------|
| 3.3.2 | Livestock improvement programme   |             | 22          | 22          |
| 3.3.3 | Promote dairy farming   |             |             | 4           |
| 4.1.1 | Monitoring stations must be maintained and regularly calibrated. Gauge readers need to be trained and check mechanisms introduced to ensure stability and consistency in data.  | 34          | 34          | 34          |
| 4.1.2 | Expand, rehabilitate, and improve the water quality, evaporation, rainfall, groundwater and streamflow monitoring network systems and lake and wetland water-level monitoring gauges. Implement sedimentation monitoring. | 30          | 30          | 30          |
| 4.1.3 | Monitor surface and groundwater use and levels to prevent over-exploitation   | 32          | 32          | 32          |
| 4.2.1 | Train a committed cadre of extension service providers to render interdisciplinary, integrated extension service to include (CMCs), CDOs, etc.  | 39          | 39          | 39          |
| 4.2.2 | Develop support materials for use by extension officers (building on currently available material)  | 36          | 36          | 36          |
| 4.3.1 | Develop training guidelines and awareness raising materials (building on currently available materials)   | 34          | 34          | 34          |
| 4.3.2 | Introduction of a community radio programme dedicated to environmental matters  | 33          | 33          | 33          |
| 4.3.3 | Sanitation project. Demonstration of ecosan and other sanitation systems. Provision of appropriate designs, and training in construction. Support with provision of materials   |             | 22          | 22          |
| 4.3.4 | Implement demonstration projects - schools, model farms etc. (capital costed elsewhere)   | 27          | 27          | 27          |
| 4.3.5 | Introduction of awareness raising programmes in schools   | 35          | 35          | 35          |
| 4.4.1 | Import expertise in the development of technology guidelines, training, and other approaches  | 28          | 28          | 28          |

# **6. MANAGEMENT AND INVESTMENT ACTIONS**

The analysis of the options, which originated from the assessment of issues, available opportunities, and threats within the Awoja catchment led to the identification of management and investment interventions that contribute to attainment of the catchment vision and objectives. This set of agreed interventions form the main body of the Awoja catchment management plan. The intervention sites, implementation plan, and the investment plan are presented in the sections that follow.

## **6.1 Intervention Sites**

Intervention sites were defined to village level, if possible, with the respective structures and their numbers to the various options for the best ranked scenario; scenario 3. Some options do not apply to all districts due to their nature while others are general and concern all districts like the development of a manual and, therefore, do not require any intervention sites. The latter are marked “not applicable (N/A)” in the intervention site lists. *Table 6 1* shows the total number of administrative units (sub-counties, parishes, and villages) that will be reached by each intervention. The full lists of intervention sites for each district are shown in Annex 2.

*Table 6-1: Number of Administrative Units covered by the Interventions*

| Ref. No. | Options   | Numbers Covered in the whole catchment |          |          |
|----------|---|--|----------|----------|
|          |   | Sub-counties                           | Parishes | Villages |
| 1.1.1    | The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja catchment and Kyoga WMZ   | N/A                                    | N/A      | N/A      |
| 1.1.2    | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | 35                                     | 54       | 105      |
| 1.1.3    | Identification and regular (annually) eradication of floating islands / invasive alien plants   | 8                                      | 15       | 16       |
| 1.1.4    | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | 20                                     | 60       | 98       |
| 1.1.5    | River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation  | 53                                     | 77       | 112      |
| 1.1.8    | Ecological water requirements: Revisiting legislation and catchment assessment  | N/A                                    | N/A      | N/A      |
| 1.1.8.1  | Introduce improved farming practices  | 43                                     | 59       | 115      |
| 1.1.9    | Build the capacity on conservation methods, especially for wetlands   | 34                                     | 50       | 73       |

| Ref. No.      | Options  | Numbers Covered in the whole catchment |          |          |
|---------------|--|--|----------|----------|
|               |  | Sub-counties                           | Parishes | Villages |
| 1.1.10        | Monitoring the impacts of sustainable land and environmental management in terms of improved farming practices (individual benefits) and downstream water management   | 1                                      | 2        | 2        |
| <b>1.1.11</b> | Develop and implement climate change awareness creation strategy addressing sustainable land and environment management  | 42                                     | 251      | 2083     |
| <b>1.1.12</b> | Promote climate change planning at sector, catchment and sub-catchment levels  | 42                                     | 251      | 2083     |
| <b>1.1.13</b> | Promote climate -smart -integrated landscape management approaches.  | 27                                     | 130      | 136      |
| <b>1.1.14</b> | Uptake of climate change and disaster risk reduction tools for joint planning and implementation of sustainable land and environmental technologies and practices at catchment and sub-catchment levels                              | 27                                     | 130      | 136      |
| <b>1.1.15</b> | Build capacity of communities, land and environment users by supporting them in land suitability mapping, land use and farm planning, soil health improvement, soil and water conservation activities in micro and macro watersheds. | 27                                     | 130      | 136      |
| <b>1.1.16</b> | Develop green management plans for business models   | All                                    | All      | All      |
| <b>1.1.17</b> | Undertake carbon stock assessment  | All                                    | All      | All      |
| <b>1.1.18</b> | Conduct natural resource accounting for ecosystems in the catchment.   | All                                    | All      | All      |
| 1.2.1         | Provide routine training (forestry handbook) to CMCs, forest management, land care and agricultural managers: one training in each district every two years  | N/A                                    | N/A      | N/A      |
| 1.2.2         | Establish nurseries for provision of seedlings and establish distribution, training and management systems in all districts - pilot projects   | 37                                     | 42       | 45       |
| 1.2.3         | Support the implementation of a reforestation programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land management                 | 55                                     | 71       | 113      |
| 1.2.4         | Planting trees in degraded areas   | 42                                     | 60       | 106      |
| <b>1.2.6</b>  | Promote woodlots and agro-forestry   | 4                                      | 6        | 10       |
| <b>1.2.7</b>  | Build capacity and promote use of practices for managed regeneration of wetland and indigenous trees to increase tree cover in degraded catchment and sub-sub-catchment areas.   | 3                                      | 10       | 14       |
| 1.3.1         | Regular updating of district wetland inventories by districts  | 46                                     | 96       | 119      |
| 1.3.2         | Updating of demarcated protection zones and acceptable utilisation of wetlands, producing GIS maps of wetlands at various levels   | 43                                     | 80       | 108      |
| 1.3.3         | Study for economic valuation of wetland resources and disseminate the results  | N/A                                    | N/A      | N/A      |
| 1.3.4         | Review and update the wetland management/action plans  | 44                                     | 80       | 105      |
| 1.3.5         | Restoration of vital (unique) critical (subject to on-going degradation) wetlands  | 31                                     | 54       | 67       |
| 1.4.1         | Mapping, demarcation of riparian and roadside protection zones and identify and implement source protection measures   | 46                                     | 69       | 80       |
| 2.1.1         | Improve sanitation technology and building material support and implement them   | 47                                     | 59       | 100      |

| Ref. No. | Options  | Numbers Covered in the whole catchment |          |          |
|----------|--|--|----------|----------|
|          |  | Sub-counties                           | Parishes | Villages |
| 2.1.2    | Improve faecal sludge management (collection, transportation, treatment and re-use) through clustering of small towns (Kumi Sironko, Kapchorwa, Nakapiripirit) | 6                                      | 6        | 6        |
| 2.2.2    | Refurbish valley dams and tanks  | 25                                     | 31       | 37       |
| 2.3.1    | Design and construct River Agu scheme to supply Kumi and surroundings - water and wastewater works   | 2                                      | 2        | 2        |
| 2.3.2    | Soroti treatment and distribution - expand in stages (NWSC)  | 1                                      | 1        | 1        |
| 2.6.1    | Feasibility studies and design of prioritised sand dams. Construction, with cooperation and input from local communities                                       | 7                                      | 8        | 10       |
| 2.7.1    | Needs identification for location and type of dams and associated abstraction facilities   | 15                                     | 20       | 21       |
| 2.7.2    | Feasibility & design of prioritised dams for stock watering and humans needs. Construction, with cooperation and input from local communities                  | 20                                     | 27       | 29       |
| 2.8.2    | Enhancement of rain fed agriculture  | 48                                     | 54       | 75       |
| 2.8.3    | New irrigation schemes: Undertake feasibility studies of identifies areas  | 38                                     | 63       | 86       |
| 2.8.4    | Construction of new irrigation schemes: Improved (seasonal) Wetlands Schemes   | 19                                     | 32       | 42       |
| 2.8.5    | Construction of new irrigation schemes: Low - power pumped schemes that utilise water from nearby rivers, swamps and lakes                                     | 16                                     | 27       | 29       |
| 2.8.6    | Construction of new irrigation schemes: Simple gravity - fed schemes   | 16                                     | 27       | 31       |
| 2.8.7    | Construction of new irrigation schemes: Type A Formal Irrigation   | 3                                      | 3        | 3        |
| 2.8.8    | Construction of new irrigation schemes: Type B Formal Irrigation   | N/A                                    | N/A      | N/A      |
| 2.9.1    | Water efficiency evaluation and recommendations  | N/A                                    | N/A      | N/A      |
| 2.10.1   | Investment and implementation in hydropower installations and grid distribution  | 17                                     | 20       | 22       |
| 2.11.1   | Promote additional and alternative sources of energy including low cost solar panels to be used for LED lighting, radios and cell phones                       | 52                                     | 66       | 105      |
| 2.11.2   | Promote use of energy efficient woodstoves by making the technology readily available  | 57                                     | 66       | 93       |
| 2.12.1   | Develop a manual on aquaculture techniques (building on available material)  | N/A                                    | N/A      | N/A      |
| 2.12.2   | Assist farmers with rehabilitation of viable aquaculture ponds and in the construction of new ponds - allowance made for a pilot                               | 44                                     | 48       | 51       |
| 2.12.3   | Train and assist farmers on the appropriate fishing techniques and equipment as well as the protection of breeding grounds                                     | 15                                     | 20       | 25       |
| 2.13.1   | Create an ecological tourism organisation, train it and provide the necessary starting equipment e.g. a boat   | 24                                     | 28       | 35       |
| 2.13.2   | Promote horticulture   | 38                                     | 47       | 55       |
| 2.13.3   | Promote bee keeping  | 42                                     | 55       | 77       |
| 3.1.1    | Demarcate areas considered unsafe for habitation or other use and warn inhabitants   | 42                                     | 69       | 109      |
| 3.1.2    | Develop an early flood warning system  | 43                                     | 74       | 144      |
| 3.1.3    | Development/compilation of hazard/risk map for landslides/ sedimentation/floods  | N/A                                    | N/A      | N/A      |

| Ref. No. | Options  | Numbers Covered in the whole catchment |          |          |
|----------|--|--|----------|----------|
|          |  | Sub-counties                           | Parishes | Villages |
| 3.3.1    | Determine current stocking rates and assess carrying capacity of all districts. Develop a plan to keep the numbers of animals within the theoretical limits of carrying capacity   | N/A                                    | N/A      | N/A      |
| 3.3.2    | Livestock improvement programme  | 50                                     | 86       | 206      |
| 3.3.3    | Promote dairy farming  | 46                                     | 65       | 99       |
| 4.1.1    | Monitoring stations must be maintained and regularly calibrated. Gauge readers need to be trained and check mechanisms introduced to ensure stability and consistency in data  | N/A                                    | N/A      | N/A      |
| 4.1.2    | Expand, rehabilitate, and improve the water quality, evaporation, rainfall, ground water and stream flow monitoring network systems and lake and wetland water level monitoring gauges. Implement sedimentation monitoring | N/A                                    | N/A      | N/A      |
| 4.1.3    | Monitor surface and ground water use and levels to prevent over-exploitation   | N/A                                    | N/A      | N/A      |
| 4.2.1    | Train a committed cadre of extension service providers to render inter-disciplinary, integrated extension service to include CMCs, CDOs etc.   | 1                                      | 3        | 0        |
| 4.2.2    | Develop support materials for use by extension officers (building on currently available materials)  | N/A                                    | N/A      | N/A      |
| 4.3.1    | Develop training guidelines and awareness raising materials (building on currently available materials)  | N/A                                    | N/A      | N/A      |
| 4.3.2    | Introduction of a community radio programme dedicated to environmental matters   | 4                                      | 6        | 6        |
| 4.3.3    | Sanitation project. Demonstration of ecosan and other sanitation systems. Provision of appropriate designs and training in construction. Support with provision of materials   | 40                                     | 59       | 105      |
| 4.3.4    | Implement demonstration projects - schools, model farms etc. (capital costed elsewhere)  | 51                                     | 62       | 85       |
| 4.3.5    | Introduction of awareness raising programmes in schools  | 59                                     | 79       | 107      |
| 4.4.1    | Train experts (import expertise) in the development of technology guidelines, training and other approaches  | N/A                                    | N/A      | N/A      |
| 4.4.2    | Enhance and strengthen the capacity of BMUs  | 12                                     | 19       | 23       |
| 4.4.3    | Enhance and strengthen the capacity of rice grower associations  | 22                                     | 37       | 39       |
| 4.5.1    | Strengthen enforcement bodies with capacity  | 1                                      | 1        | 1        |

## 6.2 Implementation Plan

From the district intervention site lists a detailed implementation plan has been developed. However, the villages have been summarised following the sub-counties and the number and type of structures put together to create more of an overview. Therefore, one has to go back to the intervention site list of the specific district for detailed information.

The options are grouped under the developed objectives for the Awoja catchment and therein according to the respective topics under which they fall (see also tables *Table 5-5* and *Table 5-6*). Within the topics the options follow the order of the results of the screening/ranking (from high to low scores) to reflect their importance. This gives a detailed picture of which structures should be implemented in which area of each district if applicable under the respective option and at the same time illustrates the most concerned areas for that option.

The option 2.3.1 “Design and construct River Agu scheme to supply Kumi and surrounds it water and waste water works” has not been included in the detailed implementation plan as plans are under way to construct the water supply scheme according to officials from Kumi district. Option 2.8.8 “Construction of new irrigation schemes: Type B formal irrigation” has not been considered further as no district considered it as a possible option in their area. Although they were still separate options in the intervention site lists, option 2.7.1 (Needs identification for location and type of dams and associated abstraction facilities) has been incorporated into option 2.7.2 (Feasibility and design of prioritised dams for stock watering and human needs. Construction with cooperation and input from local communities) as they are closely linked and the concerned districts have already suggested sites and the types of structures. The last option 4.5.2 (Develop bylaws and ordinances on water and environmental management and protection) has been newly added to the detailed implementation plan as there was a great demand for this theme from the districts during the field visits. The detailed Awoja Implementation Plan is set out in Annex 3.

Since the information on each option is very detailed, it was necessary to compile it further into a summarised implementation plan. The districts under one option have been put together and the type and number of structures for each district summarised as shown in *Table 6-2* below.

The indicators meant to measure performance associated with implementation of the specific options are presented in Table 6-3.

*Table 6 -2: Summary Implementation Plan*

| Ref. No. | Options   | Districts concerned  | Type and No. of structure  | Period of Intervention         |   |   |   |   |
|----------|---|--|--|--------------------------------|---|---|---|---|
|          |   |  |  | 1                              | 2 | 3 | 4 | 5 |
|          | <b>Catchment Protection and Conservation</b>  |  |  |                                |   |   |   |   |
|          | <b>Sustainable Land and Environmental Management</b>  |  |  |                                |   |   |   |   |
| 1.1.8.1  | Introduce improved farming practices  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bokedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngara | Construct 40 cylos, 60 underground water tanks, 2 irrigation layouts, provide 80 ox-ploughs, 2 tractors, 50 flesian cattle, 26 treadle pumps, tree seedlings, seeds, woodlots: 10ha, agroforestry: 53ha, contour bunds: 400km, trenches: 50km, cattle tracks: 5grass planting, train and equip 1,227 farmers | Kyoga WMZ, CMC, DNRO, DEO, DAO | x | x | x |   |
| 1.1.3    | Identification and regular (annually) eradication of floating islands / invasive alien plants   | Soroti, Serere, Ngora, Kumi, Katakwi   | 3 tractors, 9 motor boats, 18 wheelbarrows, hoes and other harvesting equipment, construction of 6 barriers before Awoja bridge, eradication of plants twice yearly on Awoja River and Lake Bisina   | Kyoga WMZ, CMC, DNRO, DEO      | x | x | x |   |
| 1.1.8    | Ecological water requirements: Revisiting legislation and catchment assessment  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bokedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngara | Ecological water requirements: legislation and catchment assessment  | Kyoga WMZ, CMC, Consultant     | x |   |   |   |
| 1.1.1    | The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja catchment and Kyoga WMZ | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bokedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngara | Develop a comprehensive and sustainable land and environmental management manual and disseminate it  | Kyoga WMZ, CMC, Consultant     | x |   |   |   |

|        |   |  |   |   |
|--------|---|--|---|---|
| 1.1.2  | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Establish 8 runoff management structures, 14ha of agroforestry, 344ha of woodlots/agroforestry, 190km of contour bunds, 128km of road design, 3 bridges, 7 small - drip irrigations, 14 nurseries, carry out 14 sensitisations  | Kyoga WMZ, CMC, DNRO, DEO, DAO                              |
| 1.1.4  | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | Amudat, Napak, Nakapiripirit, Bukwo, Katakwi, Kween  | 6 x fire fighting equipment, training of fire fighters (24), training of fire fighting committees (58), development of 6 fire management plans, quarterly public awareness raising (113 communities), 41 community trainings, establish fire lines of 40km, ordinance and by-laws!                    | Kyoga WMZ, CMC, DNRO, DEO, DFO, CDO                         |
| 1.1.5  | River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation  | Bulambuli, Sironko, Amudat, Napak, Kapchorwa, Nakapiripirit, Soroti, Serere, Ngora, Bukwo, Katakwi, Bukedea, Kween       | Gabions: 276km, demarcations on rivers: 230km, recourse of river: 10km, river pegging: 260km, weirs: 15, bridges: 15, stone pitching of cattle access points: 7km <sup>2</sup> , cattle access points: 218, woodlots: 15ha, riparian vegetation (trees, grass); 323km, seedlings: 50,000+, de-silting | Kyoga WMZ, CMC, DNRO, DEO, DFO                              |
| 1.1.9  | Build the capacity on conservation methods, especially for wetlands   | Bulambuli, Amudat, Napak, Kapchorwa, Nakapiripirit, Soroti, Serere, Ngora, Kumi, Katakwi, Bukedea, Kween                 | Form and train 56 environmental committees, form and train 15 wetland user committees, train community members in 10 villages, carry out sensitisations in 68 villages, develop training manuals (160 copies)   | Kyoga WMZ, CMC, DNRO, DEO                                   |
| 1.1.10 | Monitoring the impacts of sustainable land and environmental management in terms of improved farming practices (individual benefits) and downstream water management  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Develop monitoring programmes for all 14 districts  | Kyoga WMZ, CMC, DNRO, DEO, DAO, DCO                         |
| 1.1.11 | Develop and implement climate change awareness creation strategy addressing sustainable land and environment management   | Sironko, Bulambuli, Ngora, Katakwi and Soroti districts with all the sub-counties, parishes and villages                 | - Conduct a holistic climate change capacity needs assessment<br>- Develop a climate change capacity building and training plan and program   | All communities, state and non-state climate change actors. |
| 1.1.12 | Promote climate change planning at sector, catchment and sub-catchment levels   | Sironko, Bulambuli, Ngora, Katakwi and Soroti districts with all the sub-counties, parishes and villages                 | - Carry out a robust economic needs assessment in the most impacted sectors by climate change (agriculture, water, energy, infrastructure-roads, bridges, settlements)  | Kyoga WMZ, DNRO, DWO, Roads, Housing)                       |

|        |   |   |   |                                  |
|--------|---|---|---|----------------------------------|
| 1.1.13 | Promote climate -smart -integrated landscape management approaches. | <p><b>Sironko district</b></p> <p><b>Bukise Subcounty</b></p> <p>Mayempe village and Lusate parish<br/>Kijua village and Lusate Parish</p> <p><b>Bumalimba Sub-county</b></p> <p>Kisenyi village, Nandele parish</p> <p><b>Miwu village, Bumalimba parish</b></p> <p>River Sironko</p> <p>Sironko bridge-River separates Miwu and Budadiri</p> <p>Town council</p> <p><b>Busulani Sub-county</b></p> <p>River Sironko Bumasifa Bridge</p> <p>Separates Bumasifa/Nazu village</p> <p>Bugimunya parish</p> <p>Makuyu Trading center</p> <p>Makuyu village, Busulani parish</p> <p><b>Bumasifwa sub-county</b></p> <p>River Mahapa</p> <p>Bulwala Parish, Nanseke village</p> <p>Mahapa bridge</p> <p>Jewa village, Bunamande parish</p> <p><b>Bugitimwa Sub-county</b></p> <p>Nabusuo village, Bugitimwa parish</p> <p><b>Massaba sub-county</b></p> <p>Namagoye village, Bufupa parish</p> <p><b>Buyobo sub-county</b></p> <p>Sonooli bridge</p> | <ul style="list-style-type: none"> <li>- Plant flood resistant crop varieties</li> <li>- Apply climate smart land use and building codes for private and public buildings.</li> <li>- Invest in making existing and new buildings more resilient.</li> <li>- Review and update to apply the climate smart transport codes</li> <li>- Promote climate smart aquaculture practices</li> <li>- Demarcate, gazette and restore wetland areas.</li> <li>- Promote climate smart agro-forestry practices</li> <li>- Climate proof investments of drainage plans and systems.</li> <li>- Construct early warning and climate information systems</li> <li>- Develop emergency response measures and recovery centres in the most vulnerable areas</li> <li>- Construct valley dams and tanks</li> <li>- Construct rain water harvesting infrastructure.</li> <li>- Plant flood resistant pastures for livestock.</li> <li>- Promote climate smart livestock breeds.</li> <li>- Promote community forest and national park groups.</li> <li>- Design and implement Ramsar site wetland research, eco-tourism and education centres</li> <li>- Establish a climate change fund to manage disasters and minimize risks</li> </ul> | MWE, DLG, MAA-IF,<br>x x x x x x |
|        |   |   |   |                                  |

| 2.13.1 | Create an ecological tourism organisation, train it and provide the necessary starting equipment e.g a boat | Bulkwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Form and train 23 ecological tourism organisations, establish an office/information centre for each organisation, train 39 guides, construct 9 bandas, establish 17 campsites with the necessary equipment, establish 7 restaurants with equipment, establish 3 art and craft centres, provide 31 binoculars, 53 life jackets, 7 cameras, 4 guide books, 15 boats, 1 abseiling equipment | Kyoga WMZ, CMC, DNRO, DEO, CDO  | x x x x | x x x x | x x x x | x x x x |
| 2.13.2 | Promote horticulture  | Bulambuli, Amudat, Napak, Kapchorwa, Nakapiripirit, Soroti, Serere, Ngora, Kumi, Bulkwo, Katakwi, Bukeda, Kween          | Train 778 farmers and equip them with the necessary tools including seeds, establish 10 demonstration plots, 12 greenhouses, irrigation pumps, treadle pumps, pipes, fencing   | Kyoga WMZ, CMC, DAO             | x x x x | x x x x | x x x x | x x x x |
| 2.13.3 | Promote bee keeping   | Bulkwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Train 1,054 farmers on modern bee keeping, 6,490 beehives, 864 harvesting gear, provide processing, packaging and marketing equipment for all, set up 2 honey collection centres and 33 honey processing plants  | Kyoga WMZ, CMC, DAO             | x x x x | x x x x | x x x x | x x x x |
|        | <b>Mitigation and Adaptation</b>  |  |  |                                 |         |         |         |         |
|        | <b>Flood and Landslide Management and Preparedness for Floods and Landslides</b>                            |  |  |                                 |         |         |         |         |
| 3.1.1  | Demarcate areas considered unsafe for habitation or other use and warn inhabitants                          | Bulkwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Demarcate 104 areas unsafe for habitation and 5 settlements in game reserves   | Kyoga WMZ, CMC, DNRO, DEO, DRMC | x x x x | x x x x | x x x x | x x x x |
| 3.1.3  | Development/Compilation of hazard/risk map for landslides/sedimentation/floods                              | Bulkwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Develop/compile hazard/risk maps for landslides/sedimentation/ floods  | Kyoga WMZ, CMC, Consultant      | x x x x | x x x x | x x x x | x x x x |
| 3.1.2  | Develop an early flood warning system   | Bulkwo, Kween, Bulambuli, Kapchorwa, Sironko, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora         | Establish 144 early warning systems for floods and landslides, install 40 traditional early warning systems, form and train 34 early warning committees  | Kyoga WMZ, CMC, DNRO, DEO, DRMC | x x x x | x x x x | x x x x | x x x x |

| Ref. No. | Options                         | Districts concerned  | Type and No. of structure  | Responsibility                  | 1 | 2 | 3 | 4 | 5 |
|----------|---------------------------------|--|--|---------------------------------|---|---|---|---|---|
|          |                                 |  |  |                                 |   |   |   |   |   |
| 3.3.1    | Cattle Keeping Practices        | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bokedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Determine current stocking rates and assess carrying capacity of all districts. Develop a plan to keep the numbers of animals within the theoretical limits of carrying capacity   | Kyoga WMZ, CMC, consultant      | x |   |   |   |   |
| 3.3.2    | Livestock improvement programme | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bokedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Establish 42 artificial insemination services, 47 cattle dips and crushes, 62 zero grazing units, 2 demo sites for tsetse and tick control, 7 fodder banks, 46 watering points, 6 animal drug stores, 6 demonstration ranches, provide 730 high cross breed cattle, 124 goats, 124 sheep, improved veterinary services in 45 locations including vaccinations, tsetse fly and tick control and spraying, carry out 25 awareness raising campaigns on good livestock practices, build capacity for veterinary staff and health workers, train 668 farmers on improved modern management of livestock  | Kyoga WMZ, CMC, DNRD, DEO, Dvet | x | x | x | x | x |
| 3.3.3    | Promote dairy farming           | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bokedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Provide 505 high breed dairy cattle, establish 4 milk cooling plants, establish 34 zero grazing units, establish 9 fodder banks, provide 60 milk coolers, 6 milking machines, mini-coolers, transportation cans, form and train 34 dairy farmers associations, train and equip 512 farmers, train and equip 20 practitioners in artificial insemination, train 16 people on management of zero grazing, pasture, production and management, train 16 people on making yoghurt, ghee etc., plant 2 ha of fodder grass, improve veterinary services, carry out 2 vaccination campaigns, carry out tick, tsetse and worm controls, tagging of animals | Kyoga WMZ, CMC, DNRD, DEO, Dvet | x | x | x | x | x |

|                           |  |   |   |                                 |
|---------------------------|--|---|---|---------------------------------|
|                           |  |   |   |                                 |
| 4.1.1                     | Monitoring stations must be maintained and regularly calibrated. Gauge readers need to be trained and check mechanisms introduced to ensure stability and consistency in data  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Assessment of the monitoring stations, rehabilitation of the stations if necessary, training of gauge readers, regular data collection/monitoring, data analysis and appropriate data storage   | Kyoga WMZ, DWRM, CMC            |
| 4.1.2                     | Expand, rehabilitate, and improve the water quality, evaporation, rainfall, ground water and stream flow monitoring network systems and lake and wetland water level monitoring gauges. Implement sedimentation monitoring | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Assessment of the water quality, evaporation, rainfall, groundwater and stream flow monitoring network and water level monitoring gauges, rehabilitation or expansion of stations if necessary, regular data collection/monitoring, data analysis and appropriate data storage, set up a sedimentation monitoring network | Kyoga WMZ, DWRM, CMC            |
| 4.1.3                     | Monitor surface and ground water use and levels to prevent over - exploitation   | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Regular surface and groundwater monitoring, inventory of water users, monitoring and follow up of water abstraction permits   | Kyoga WMZ, DWRM, CMC            |
| <b>Extension Services</b> |  |   |   |                                 |
| 4.2.1                     | Train a committed cadre of extension service providers to render inter - disciplinary, integrated extension service to include CM(Cs, CDOs etc.  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Train extension service providers to render inter - disciplinary, integrated services   | Kyoga WMZ, CMC, consultant      |
| 4.2.2                     | Develop support materials for extension officers (building on currently available materials)   | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Develop support materials for the extension officers  | Kyoga WMZ, CMC, consultant      |
| <b>Awareness Raising</b>  |  |   |   |                                 |
| 4.3.5                     | Introduction of awareness raising programmes in schools  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Establish 121 environmental clubs, establish 50 drama clubs, establish 4 demo schools, carry out 58 awareness raising campaigns, train teachers in 75 schools, provide IEC material for 38 schools  | Kyoga WMZ, CMC, DNRO, DEO, DEdO |
| 4.3.1                     | Develop training guidelines and awareness raising materials (building on currently available materials)  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Develop training guidelines and awareness raising materials   | Kyoga WMZ, CMC, consultant      |

| Ref. No.                               | Options  | Districts concerned  | Type and No. of structure  | Responsibility                  |   |   |   |   |
|--|--|--|--|---------------------------------|---|---|---|---|
|  |  |  |  | 1                               | 2 | 3 | 4 | 5 |
| 4.3.2                                  | Introduction of a community radio programme dedicated to environmental matters   | Bukwo, Kween, Bulambuli, Sironko, Bukeeda, Soroti, Serere, Katakwí, Napak, Nakapiripirit, Amudat, Kumi, Ngora            | Establish 4 radio stations, establish environmental programmes; 5 x general, 1 x per month: 2 x, 2 x per month: 1 x, 1 x per week: 2 x, 3 x per week: 2 x, radio talk shows and spot messages: quarterly: 2 x, weekly: 1 x, establish 3 radio listening clubs, provision of IEC material for dissemination   | Kyoga WMZ, CMC, DNRO, DEO, DCO  | x | x | x | x |
| 4.3.4                                  | Implement demonstration projects - schools, model farms etc. (capital costed elsewhere)  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeeda, Soroti, Serere, Katakwí, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Establish 84 model farms; woodlots in 16 schools; agroforestry, woodlots and nurseries in 22 schools, rehabilitate a poultry and piggery in 1 school, form and train 43 young farmers associations   | Kyoga WMZ, CMC, DNRO, DEO, DEdO | x | x | x | x |
| 4.3.3                                  | Sanitation project. Demonstration of ecosan and other sanitation systems. Provision of appropriate designs and training in construction. Support with provision of materials | Bukwo, Kween, Bulambuli, Sironko, Bukeeda, Soroti, Serere, Katakwí, Napak, Nakapiripirit, Amudat, Kumi, Ngora            | Construct 61 5stance VIP latrines, 34 ecosan toilets, 16 rubbish skips, carry out 44 awareness raising campaigns, train households on waste management and disposal in 8 villages, form and train 16 sanitation groups, form and train 24 committees on ecosan toilets, form and train 23 committees on management, operation and maintenance of latrines, carry out 1 study on collapsable soil to find the most appropriate toilet systems | Kyoga WMZ, CMC, DNRO, DEO, DWO  | x | x | x | x |
| <b>Institutional Capacity Building</b> |  |  |  |                                 |   |   |   |   |
| 4.4.1                                  | Train experts (import expertise) in the development of technology guidelines, training and other approaches  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeeda, Soroti, Serere, Katakwí, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Train experts in the development of technology guidelines, training and other approaches   | Kyoga WMZ, CMC, consultant      | x |   |   |   |
| 4.4.2                                  | Enhance and strengthen the capacity of BMUs  | Serere, Soroti, Ngora, Kumi, Katakwí, Bukeeda  | Form or reactivate 23 BMUs, train 227 BMU members, sensitise 23 communities, establish 4 BMU shelters  | Kyoga WMZ, CMC, DNRO, DEO, DAO  | x | x |   |   |
| 4.4.3                                  | Enhance and strengthen the capacity of rice grower associations  | Bulambuli, Nakapiripirit, Soroti, Serere, Ngora, Kumi, Katakwí, Bukedea, Kween   | Form 39 rice grower associations, train 500 rice grower association members, carry out 12 awareness raising campaigns and 2 exchange visits to established associations, construct 14 rice mills, 5 storage facilities and 1 rice store, rice haulers, provide seeds, develop training material  | Kyoga WMZ, CMC, DNRO, DEO, DAO  | x | x | x |   |

| Legislation and Enforcement |   |   |   |
|-----------------------------|---|---|---|
| 4.5.1                       | Strengthen enforcement bodies with capacity   | Amudat, Napak   | Train and enforce environmental committees (3), law enforcement bodies (3) (police, UWA, LDUs) and community LCs on environmental law enforcement, train police in environmental affairs, increase of number of environmental police in Napak |
| 4.5.2                       | Develop by - laws and ordinances on water and environmental management and protection | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngara | Develop by - laws and ordinances on water and environmental management and protection   |

#### Explanations

|       |  |   |
|-------|--|---|
| 2.3.1 | Design and construct River Agu scheme to supply Kumi and surroundings - water and wastewater works | Construction plans are under way  |
| 2.8.8 | Construction of new irrigation schemes: Type B Formal Irrigation                                   |   |
| 2.7.1 | Needs identification for location and type of dams and associated abstraction facilities           | Bulambuli, Napak, Nakapiripirit, Soroti, Serere, Sironko, Bukeda  |
| 4.5.2 | Develop by - laws and ordinances on water and environmental management and protection              | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngara |

- 1 Fire equipment and fire fighting plans have been increased to 6 as they concern all districts, Napak communities assumed to be 100.
- 2 The trainings for nursery managers have been increased to 36 as it should be done for all nurseries.
- 3 The number of committees has been increased as all sand dams should have a committee.
- 4 The number of trainings has been increased as all fish ponds have to be accompanied by a training. It is assumed that a committee consists of 10 members.

*Table 6-3: Indicators for the Options*

| Ref. No.       | Options   | Indicator  |
|----------------|---|--|
|                | <b>Catchment Protection and Conservation</b>  |  |
|                | <b>Sustainable Land and Environmental Management</b>  |  |
| <b>1.1.8.1</b> | Introduce improved farming practices  | The income of farmers has increased by 20%   |
| <b>1.1.3</b>   | Identification and regular (annually) eradication of floating islands/invasive alien plants   | The area invaded by invasive plants has been reduced to 0  |
| <b>1.1.8</b>   | Ecological water requirements: Revisiting legislation and catchment assessment  | Legislation providing for ecological water requirements is in place. Requirements assessed for 8 streams   |
| <b>1.1.1</b>   | The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja Catchment and Kyoga WMZ   | All districts are in the possession of a comprehensive and sustainable land and environmental management manual  |
| <b>1.1.2</b>   | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | Each farm is equipped with x conservation structures. Baseline: 0. The productivity of each farm has increased by 20 %   |
| <b>1.1.4</b>   | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | Availability of fire management plans in each district, number of sensitised communities, number of committees and members trained, number of ha of uncontrolled burning is reduced by 60% |
| <b>1.1.5</b>   | River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation  | Number of hectares of areas demarcated and restored, number of cattle access points  |
| <b>1.1.9</b>   | Build the capacity on conservation methods, especially for wetlands   | Number and type of activities carried out by the trained committees  |
| <b>1.1.10</b>  | Monitoring the impacts of sustainable land and environmental management in terms of improved farming practices (individual benefits) and downstream water management  | Monitoring programme implemented   |
|                | <b>Reforestation</b>  |  |
| <b>1.2.2</b>   | Establish nurseries for provision of seedling and establish distribution, training and management systems in all districts - pilot projects   | Existence of x newly established nurseries, number of seedlings produced, number of seedlings sold Baseline: 0   |
| <b>1.2.3</b>   | Support the implementation of a reforestation programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land management                                    | Number of hectares under agroforestry, number of ha of newly planted woodlots, number of seedlings produced and sold in x nurseries Baseline: 0  |
| <b>1.2.4</b>   | Planting of trees in degraded areas   | Number of ha with newly planted trees that survived, number of seedlings planted, number of seedlings produced and sold in x nurseries Baseline: 0   |
| <b>1.2.1</b>   | Provide routine training (forestry handbook) to CMCs, forest management, land care and agricultural managers: 1 training in each district every two years   | Number and type of activities carried out by the persons trained   |

| <b>Ref. No.</b> | <b>Options</b>  | <b>Indicator</b>   |
|-----------------|---|--|
|                 | <b>Lakes and Wetlands Management</b>  |  |
| <b>1.3.1</b>    | Regular updating of district wetland inventories by districts   | Availability of wetland inventories in each district, yearly update of wetland inventories   |
| <b>1.3.3</b>    | Study for economic valuation of wetland resources and disseminate the results   | Each district is in the possession of the study reports  |
| <b>1.3.2</b>    | Updating of demarcated protection zones and acceptable utilization of wetlands, producing GIS maps of wetlands at various levels                                | Availability of GIS maps for x wetlands, number and ha of demarcated protection zones  |
| <b>1.3.4</b>    | Develop or review and update the wetland management/action plans  | Availability of wetland management action plans (new and updated) in all districts   |
| <b>1.3.5</b>    | Restoration of vital (unique) critical (subject to on - going degradation) wetlands   | Number of hectares of wetlands restored, number of open access areas for animals, activities undertaken by x wetlands management committees                                |
|                 | <b>Buffer Zone Set - asides</b>   |  |
| <b>1.4.1</b>    | Mapping, demarcation of riparian and roadside protection zones and identify and implement source protection measures  | Number of kilometres and size of riparian and roadside protection zones established, number of ha restored, availability of maps of riparian and roadside protection zones |
|                 |   |  |
|                 | <b>Sanitations Systems</b>  |  |
| <b>2.1.1</b>    | Improve sanitation technology and building material support and implement them  | Number of toilets according to the type of improved technology constructed and used  |
| <b>2.1.2</b>    | Improve faecal sludge management (collection, transportation, treatment and re-use) through clustering of small towns (Kumi, Sironko, Kapchorwa, Nakapiripirit) | Availability and usage of sludge treatment facilities  |
|                 | <b>Refurbishment of infrastructure</b>  |  |
| <b>2.2.2</b>    | Refurbish valley dams and tanks   | Number of times valley dams and times valley tanks refurbished and used  |
|                 | <b>Piped Water Schemes (Surface Water)</b>  |  |
| <b>2.3.2</b>    | Soroti treatment and distribution - expand in stages (NWSC)   | Availability of 2 reservoirs and x new pipelines, number of people served with clean safe water from the extensions  |
|                 | <b>Sand Dams</b>  |  |
| <b>2.6.1</b>    | Feasibility studies and design of prioritised sand dams. Construction, with cooperation and input from local communities  | Availability of 10 sand dams, number and type of activities carried out by the trained committees, number of people served from the new sand dams                          |
|                 | <b>Dams</b>   |  |
| <b>2.7.2</b>    | Feasibility & design of prioritized dams for stock watering and humans needs. Construction, with cooperation and input from local communities                   | Availability of times valley dams and times dams, number of people and animals served  |
|                 | <b>Enhancement of Irrigation</b>  |  |
| <b>2.8.2</b>    | Enhancement of rain fed agriculture   | Availability of x new irrigation schemes, number of hectares additionally irrigated, number of farmers who carry out soil/water conservation methods                       |
| <b>2.8.5</b>    | Construction of new irrigation schemes: Low - power pumped schemes that utilize water from nearby rivers, swamps and lakes                                      | Availability of 29 new irrigation schemes, number of farmers profiting from the new schemes, number of hectares irrigated  |

| Ref. No.   | Options  | Indicator   |
|--|--|---|
| <b>2.8.6</b>   | Construction of new irrigation schemes: Simple gravity - fed schemes   | Availability of 24 GFS irrigation schemes, number of farmers profiting from the new schemes, number of ha irrigated   |
| <b>2.8.3</b>   | New irrigation schemes: Undertake feasibility studies of identifies areas  | Number and type of schemes proposed in the feasibility studies  |
| <b>2.8.7</b>   | Construction of new irrigation schemes: Type A Formal Irrigation   | Availability of 3 Type A irrigation schemes, number of farmers profiting from the new schemes, number of ha irrigated |
| <b>2.8.4</b>   | Construction of new irrigation schemes: Improved (seasonal) wetlands schemes   | Availability of x irrigation schemes, number of farmers profiting from the new schemes, number of ha irrigated        |
| <b>Water Use Efficiency</b>  |  |   |
| <b>2.9.1</b>   | Water efficiency evaluation and recommendations  | Evaluation report   |
| <b>Small Hydropower</b>  |  |   |
| <b>2.10.1</b>  | Investment and implementation in hydropower installations and grid distribution  | Availability of x new power supply lines, number of people connected to the new grid lines                            |
| <b>Alternative Energy Supply</b>   |  |   |
| <b>2.11.2</b>  | Promote use of energy efficient woodstoves by making the technology readily available  | Number of people using the new woodstoves   |
| <b>2.11.1</b>  | Promote additional and alternative sources of energy including low cost solar panels to be used for LED lighting, radios and cell phones | Number of people using the new energy sources according to type   |
| <b>Aquaculture</b>   |  |   |
| <b>2.12.1</b>  | Develop a manual on aquaculture techniques (building on available material)  | Availability and use of manual in each district   |
| <b>2.12.2</b>  | Assist farmers with rehabilitation of viable aquaculture ponds and in the construction of new ponds - allowance made for a pilot         | Availability of x numbers of fish ponds, number of beneficiaries from the fish ponds                                  |
| <b>2.12.3</b>  | Train and assist farmers on the appropriate fishing techniques and equipment as well as the protection of breeding grounds               | Number of fishermen trained, number of fishing grounds protected  |
| <b>Socio-economic Strengthening</b>  |  |   |
| <b>2.13.1</b>  | Create an ecological tourism organisation, train it and provide the necessary starting equipment e.g. a boat                             | Number of ecological tourism organisations trained, number of tourists visiting the sites Baseline: 0                 |
| <b>2.13.2</b>  | Promote horticulture   | Number of acres under horticulture Baseline 0, number and type of products harvested                                  |
| <b>2.13.3</b>  | Promote bee keeping  | Number of farmers trained in bee keeping, amount of income from bee keeping per farmer Baseline: 0                    |
| <b>Mitigation and Adaptation</b>   |  |   |
| <b>Flood and Landslide Management and Preparedness for Floods and Landslides</b> |  |   |
| <b>3.1.1</b>   | Demarcate areas considered unsafe for habitation or other use and warn inhabitants   | Number of ha demarcated unsafe for habitation   |
| <b>3.1.3</b>   | Development/Compilation of hazard/risk map for landslides/sedimentation/floods   | Availability of risk maps for landslides, floods and sedimentation  |
| <b>3.1.2</b>   | Develop an early flood warning system  | Availability of x early warning systems   |

| <b>Ref. No.</b> | <b>Options</b>  | <b>Indicator</b>  |
|-----------------|---|---|
|                 | <b>Cattle Keeping Practices</b>   |   |
| <b>3.3.1</b>    | Determine current stocking rates and assess carrying capacity of all districts. Develop a plan to keep the numbers of animals within the theoretical limits of carrying capacity  | Numbers of the current stocking rates, assessment of the carrying capacity with a plan to keep the number of animals in the limit   |
| <b>3.3.2</b>    | Livestock improvement programme   | Number of vaccinations and spraying in the districts compared to the previous year, availability of x animal drug stores, number of people frequenting the drug stores, number of artificial inseminations carried out in comparison to the previous year |
| <b>3.3.3</b>    | Promote dairy farming   | Number of farmers engaging in dairy farming<br>Baseline: 0, amount of income from dairy farming<br>Baseline: 0  |
|                 | <b>Social and Institutional Development</b>   |   |
|                 | <b>Monitoring</b>   |   |
| <b>4.1.1</b>    | Monitoring stations must be maintained and regularly calibrated. Gauge readers need to be trained and check mechanisms introduced to ensure stability and consistency in data   | Number of monitoring stations regularly rehabilitated and calibrated, data bases regularly updated  |
| <b>4.1.2</b>    | Expand, rehabilitate, and improve the water quality, evaporation, rainfall, ground water and streamflow monitoring network systems and lake and wetland water level monitoring gauges. Implement sedimentation monitoring | Reviewed and expanded monitoring network is in place  |
| <b>4.1.3</b>    | Monitor surface and ground water use and levels to prevent over - exploitation  | Number and type of water resources investments using data from the monitoring networks  |
|                 | <b>Extension Services</b>   |   |
| <b>4.2.1</b>    | Train a committed cadre of extension service providers to render inter - disciplinary, integrated extension service to include CMCs, CDOs etc.  | Number of persons trained, number and type of activities carried out by the persons trained   |
| <b>4.2.2</b>    | Develop support materials for use by extension officers (building on currently available materials)   | Number and kind of support materials readily developed and disseminated to each district  |
|                 | <b>Awareness Raising</b>  |   |
| <b>4.3.5</b>    | Introduction of awareness raising programmes in schools   | Number and type of activities carried out in x schools  |
| <b>4.3.1</b>    | Develop training guidelines and awareness raising materials (building on currently available materials)   | Number and type of training guidelines and awareness raising materials available in all districts   |
| <b>4.3.2</b>    | Introduction of a community radio programme dedicated to environmental matters  | Availability of x radio stations, number and type of environmental radio programmes aired out   |
| <b>4.3.4</b>    | Implement demonstration projects - schools, model farms etc. (capital costed elsewhere)   | Availability of x model farms, ratio of number of products planted to harvested   |
| <b>4.3.3</b>    | Sanitation project. Demonstration of ecosan and other sanitation systems. Provision of appropriate designs and training in construction. Support with provision of materials  | Number and type of demonstration toilets constructed, number of well maintained clean toilets   |
|                 | <b>Institutional Capacity Building</b>  |   |
| <b>4.4.1</b>    | Train experts (import expertise) in the development of technology guidelines, training and other approaches   | Availability of technology guidelines in each district  |

| <b>Ref. No.</b>                    | <b>Options</b>   | <b>Indicator</b>   |
|------------------------------------|--|--|
| <b>4.4.2</b>                       | Enhance and strengthen the capacity of BMUs  | Number of BMU members trained, number and type of activities carried out by the BMUs   |
| <b>4.4.3</b>                       | Enhance and strengthen the capacity of rice grower associations                    | Number of persons trained, number and type of activities carried out by the rice grower associations                                     |
| <b>Legislation and Enforcement</b> |  |  |
| <b>4.5.1</b>                       | Strengthen enforcement bodies with capacity  | Number of persons trained, number of law enforcement activities carried out  |
| <b>4.5.2</b>                       | Develop bylaws and ordinances on water and environmental management and protection | Availability of bylaws, ordinances on water and environmental management and protection, 20% reduction of environmental related offences |

### **6.3 Investment Plan/Funding Requirements**

In the investment plan, costs have been allocated to each option with all their necessary inputs as shown in the plan. The time frame for the implementation is laid out for 5-6 years, but can be extended especially in regard to the high number of options. However, in case of later implementation, the adequacy of the options has to be checked and if necessary adapted. A summary of the investment plan, which mainly shows the options, investments, and the costs distributed in the 5-6 year is presented in *Table 6-4*. A detailed investment plan is attached in annex 4, which should be read together with the intervention list to get the actual villages in which the interventions are.

*Table 6-4: Summary Investment Plan*

| Ref. No. | Options   | Description of Intervention  | Yearly Cost Allocation [Thousands USD] |       |       |       |
|----------|---|--|--|-------|-------|-------|
|          |   |  | 2015/16                                | 2017  | 2018  | 2019  |
| 1.1.8.1  | Introduce improved farming practices  | Construct 40 silos (UGX754,000/1.8ton)<br>Construct 60 underground water tanks (6000L)<br>Design and construct 2 irrigation systems (10 ha per layout)<br>Provide 40 ox-ploughs<br>Procure 2 tractors<br>Procure 50 fresian cattle<br>Procure 26 treadle pumps<br>Provide for 10 ha of woodlots<br>Put 53ha under agroforestry<br>Construct 400km contour bunds<br>Excavate 50km trenches<br>Construct 5 cattle tracks<br>Train and equip 1227 farmers | 804.3                                  | 402.2 | 402.2 | 402.2 |
| 1.1.3    | Identification and regular (annually) eradication of floating islands / invasive alien plants   | Procure 3 tractors<br>Procure 9 motor boats<br>Procure 18 wheelbarrows, hoes and other harvesting equipment<br>Construction of 6 barriers before Awoja bridge  | 320.3                                  | 256.2 | 64.1  |       |
| 1.1.8    | Ecological water requirements; Revisiting legislation and catchment assessment  | Put in place legislation<br>Improve catchment assessment   |  | 117.9 |       |       |
| 1.1.1    | The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja Catchment and Kyoga WMZ | Develop a comprehensive and sustainable land and environmental management manual and disseminate it  | 98.6                                   |       |       |       |

| Ref. No. | Options   | Description of Intervention  | Yearly Cost Allocation [Thousands USD] |         |         |         |       |
|----------|---|--|--|---------|---------|---------|-------|
|          |   |  | 2015/16                                | 2017    | 2018    | 2019    | 2020  |
| 1.1.2    | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | Practice agroforestry on 40ha, half woodlots                                   |  |         |         |         |       |
|          |   | Put in place woodlots / agroforestry of 344 ha                                 |  |         |         |         |       |
|          |   | Construct contour bunds of 190km   |  |         |         |         |       |
|          |   | Road design / construction for 128km   |  |         |         |         |       |
|          |   | Construct 3 bridges  | 1,478.9                                | 1,478.9 | 985.9   | 739.4   | 246.5 |
|          |   | Install 7 small - drip irrigations (5ha each)                                  |  |         |         |         |       |
|          |   | Put in place 14ha Nurseries  |  |         |         |         |       |
|          |   | Carry out 14 sensitisations (50 people per sensitisation)                      |  |         |         |         |       |
|          |   | Procure 6 fire fighting equipment  |  |         |         |         |       |
|          |   | Training of fire fighters (24)   |  |         |         |         |       |
| 1.1.4    | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | Carry out training of fire fighting 58 committees (10 people per committee)    |  |         |         |         |       |
|          |   | Development of fire management plans   |  |         |         |         |       |
|          |   | Carry out quarterly public awareness raising (113 communities, 50 people each) | 658.3                                  | 493.8   | 493.8   |         |       |
|          |   | Carry out community 41 trainings (50 people per training)                      |  |         |         |         |       |
|          |   | Establish fire lines   |  |         |         |         |       |
|          |   | Put in place ordinance and by-laws   |  |         |         |         |       |
|          |   | Construct gabions  |  |         |         |         |       |
|          |   | Demarcations on rivers   |  |         |         |         |       |
|          |   | Recourse of river  |  |         |         |         |       |
|          |   | River pegging  |  |         |         |         |       |
| 1.1.5    | River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation  | Construct weirs  |  |         |         |         |       |
|          |   | Construct bridges  |  |         |         |         |       |
|          |   | Stone pitching of cattle access points   | 4,119.2                                | 4,119.2 | 2,353.8 | 1,176.9 |       |
|          |   | Construct cattle access points   |  |         |         |         |       |
|          |   | Put in place woodlots  |  |         |         |         |       |

|        |  |   |       |
|--------|--|---|-------|
|        |  | Plant riparian vegetation, 323km (4m wide)  |       |
|        |  | Procure seedlings   |       |
|        |  | De-silting (activity)   |       |
|        |  | Form and train 15 environmental committees (10 people per committee)  |       |
|        |  | Form and train 15 wetland user committees (10 people per committee)   |       |
|        |  | Train community members in 10 villages (50 people per village)  | 328.1 |
|        |  | Carry out sensitisations in 68 villages (50 people per village)   | 328.1 |
|        |  | Develop training manuals (160 copies)   | 164.1 |
|        |  | Build the capacity on conservation methods, especially for wetlands   |       |
| 1.1.10 | Monitoring the impacts of sustainable land and environmental management in terms of improved farming practices (individual benefits) and downstream water management   | Establish nurseries for provision of seedling and establish distribution, training and management systems in all districts - pilot projects | 66.8  |
| 1.2.2  | Establish nurseries for provision of seedling and establish distribution, training and management systems in all districts - pilot projects  | Plant tree 9 nurseries (0.2 ha per nursery)   | 87.6  |
| 1.2.3  | Support the implementation of a reforestation programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land management | Construct a greenhouse  | 886.9 |
|        |  | One training of farmers   | 886.9 |
|        |  | 5 trainings for nursery managers  | 221.7 |
|        |  | Agroforestry for 157ha  | 221.7 |

| Ref.<br>No. | Options   | Description of Intervention  | Yearly Cost Allocation<br>[Thousands USD] |      |         |      |
|-------------|---|--|---|------|---------|------|
|             |   |  | 2015/16                                   | 2017 | 2018    | 2019 |
| 1.2.4       | Planting of trees in degraded areas   | Plant trees for 12km boundary (1m wide stretch)                          |   |      |         |      |
|             |   | Plant woodlots for 239ha   |   |      |         |      |
|             |   | Procure seedlings 650,000 for 20ha                                       |   |      |         |      |
|             |   | Plant 18 tree nurseries (0.2ha each)                                     |   |      |         |      |
|             |   | Plant 12 nurseries (0.2ha each)  |   |      |         |      |
|             |   | Carry out 18 sensitisations (50 people per sensitisation)                | 82.0                                      |      |         |      |
|             |   | Carry out training of 40 farmers   |   | 49.2 |         |      |
|             |   | Carry out training of 10 management committees (10 people per committee) |   |      | 16.4    |      |
|             |   | Development of a reforestation programme                                 |   |      |         | 16.4 |
|             |   | Planting 1,155ha of trees  |   |      |         |      |
| 1.2.1       | Provide routine training (forestry handbook) to CMCs, forest management, land care and agricultural managers: 1 training in each district every two years | Procure 630,500 seedlings  |   |      |         |      |
|             |   | Plant 6 tree nurseries (0.2ha each)                                      |   |      |         |      |
|             |   | Train CMCs, forest management, land care and agricultural managers       | 22.5                                      |      |         | 22.5 |
| 1.3.1       | Regular updating of district wetland inventories by districts   | Develop 8 wetland inventories  |   |      |         |      |
|             |   |  | 83.5                                      | 33.4 | 16.7    | 16.7 |
|             |   |  |   |      |         |      |
| 1.3.3       | Study for economic valuation of wetland resources and disseminate the results   | Update 13 wetland inventories regularly                                  |   |      |         |      |
|             |   | Procure GIS equipment  |   |      |         |      |
|             |   | Economic valuation of wetland resources and its dissemination            |   |      | 62.9    |      |
| 1.3.2       | Updating of demarcated protection zones and acceptable utilisation of wetlands, producing GIS maps of wetlands at various levels                          | Demarcation of 134 protection zones                                      |   |      | 1,402.3 |      |

|       |   |   |   |  |
|-------|---|---|---|--|
|       |   |   |   |  |
| 1.3.1 | Develop or review and update the wetland management/action plans                    | Update of 49 protection zones<br>Produce GIS maps for all wetlands<br>Establish 1 protection zone with suitable vegetation (plant riparian vegetation, 5ha)<br>Procure GPS and GIS equipment<br>Develop 94 wetland management action plans<br>Review and update 126 wetland management action plans<br>De-silt 3 rivers | 94.3<br>31.4<br>368.1<br>276.1<br>276.1   | 15.7<br>15.7<br>15.7<br>15.7<br>15.7   |

|          |         |   | 2015/16   | 2017 | 2018 | 2019 |
| 4.1.1    |         | <p>Monitoring stations must be maintained and regularly calibrated. Gauge readers need to be trained and check mechanisms introduced to ensure stability and consistency in data</p>  |   |      |      |      |
| 4.1.2    |         | <p>Expand, rehabilitate, and improve the water quality, evaporation, rainfall, ground water and stream flow monitoring network systems and lake and wetland water level monitoring gauges. Implement sedimentation monitoring</p> |   |      |      |      |
| 4.1.3    |         | <p>Monitor surface and ground water use and levels to prevent overexploitation</p>  |   |      |      |      |
|          |         |   | Establish 4 milk cooling plants   |      |      |      |
|          |         |   | Establish 34 zero grazing units   |      |      |      |
|          |         |   | Establish 9 fodder banks  |      |      |      |
|          |         |   | Provide 60 milk coolers, 6 milking machines, minicoolers, transportation cans   |      |      |      |
|          |         |   | Form and train 34 dairy farmers associations (50 people per association)  |      |      |      |
|          |         |   | Train and equip 512 farmers   |      |      |      |
|          |         |   | Train 20 practitioners in artificial insemination   |      |      |      |
|          |         |   | Train 16 people on management of zero grazing, pasture, production and management   | 25.9 | 19.4 | 6.5  |
|          |         |   | Train 16 people on making yoghurt, ghee etc.  |      |      |      |
|          |         |   | Plant 2 ha of fodder grass  |      |      |      |
|          |         |   | Improve veterinary services, carry out 2 vaccination campaigns, carry out tick, tsetse and worm controls, tagging of animals  |      |      |      |
|          |         |   | Assessment of the monitoring stations, rehabilitation of the stations if necessary, training of gauge readers, regular data collection/monitoring, data analysis and appropriate data storage   |      |      |      |
|          |         |   | Assessment of the water quality, evaporation, rainfall, groundwater and stream flow monitoring network and water level monitoring gauges, rehabilitation or expansion of stations if necessary, regular data collection/monitoring, data analysis and appropriate data storage, set up a sedimentation monitoring network | 25.9 | 19.4 | 6.5  |
|          |         |   | Regular surface and groundwater monitoring, inventory of water users, monitoring and follow up of water abstraction permits   | 12.9 | 12.9 | 12.9 |

|       |  |   |       |       |       |       |
|-------|--|---|-------|-------|-------|-------|
|       |  |   |       |       |       |       |
| 4.2.1 | Train a committed cadre of extension service providers to render inter - disciplinary, integrated extension service to include CMCs, CDOs etc.                               | Train extension service providers to render inter - disciplinary, integrated services   |       | 27.2  | 27.2  |       |
| 4.2.2 | Develop support materials for use by extension officers (building on currently available materials)  | Develop support materials for the extension officers  | 30.1  |       |       |       |
| 4.3.1 | Introduction of awareness raising programmes in schools  | Establish 121 environmental clubs (15 people per club)  | 339.6 | 169.8 | 169.8 | 169.8 |
| 4.3.2 | Develop training guidelines and awareness raising materials (building on currently available materials)  | Establish 50 drama clubs (15 people per club)<br>Establish 4 demo schools<br>Carry out 58 awareness raising campaigns (50 people per campaign)<br>Train teachers in 75 schools (10 people per school)<br>Provide Information Educational and Communication (IEC) material for 38 schools<br>Develop training guidelines and awareness raising materials | 80.7  |       |       |       |
| 4.3.3 | Introduction of a community radio programme dedicated to environmental matters   | Establish 4 radio stations  | 237.7 | 95.1  | 47.5  | 47.5  |
| 4.3.4 | Implement demonstration projects - schools, model farms etc.   | Establish environmental programmes: 5 x general, 1 x per month: 2 x, 2 x per month: 1 x, 1 x per week: 2 x, 3 x per week: 2 x, radio talk shows and spot messages: quarterly: 2 x, weekly:<br>Establish 3 radio listening clubs<br>Provision of IEC material for dissemination<br>Establish 84 model farms  |       |       | 501.4 | 300.9 |
| 4.3.5 | Sanitation project. Demonstration of ecosan and other sanitation systems. Provision of appropriate designs and training in construction. Support with provision of materials | Establish woodlots in 16 schools (2ha per woodlot)<br>Nurseries in 22 schools (0.2ha per nursery)<br>Rehabilitate a poultry and pigery in 1 school<br>Form and train 43 young farmers associations (20 people per association)<br>Construct 61 with 5stance VIP latrines  |       |       | 565.0 | 565.0 |
|       |  |   |       |       |       | 282.5 |

| Ref. No. | Options   | Description of Intervention   | Yearly Cost Allocation [Thousands USD] |       |       |       |
|----------|---|---|--|-------|-------|-------|
|          |   |   | 2015/16                                | 2017  | 2018  | 2019  |
| 4.4.1    | Train experts (import expertise) in the development of technology guidelines, training and other approaches | Construct 34 ecosan toilets<br>Construct 16 rubbish skips<br>Carry out 44 awareness raising campaigns (50 people per campaign)<br>Train households on waste management and disposal in 8 villages (100 people per village)<br>Form and train 16 sanitation groups (20 people per group)<br>Form and train 24 committees on ecosan toilets (10 people per committee)<br>Form and train 23 committees on management, operation and maintenance of latrines (10 people per committee)<br>Carry out 1 study on collapsable soil to find the most appropriate toilet systems<br>Train experts in the development of technology guidelines, training and other approaches |  |       | 28.6  |       |
| 4.4.2    | Enhance and strengthen the capacity of BMUs   | Form or reactivate 23 BMUs (20 people per BMU)  |  | 197.2 | 197.2 |       |
| 4.4.3    | Enhance and strengthen the capacity of rice grower associations   | Train 227 BMU members<br>Sensitise 23 communities (50 people per community)<br>Establish 4 BMU shelters<br>Form 39 rice grower associations (15 people per association)   |  |       | 440.2 | 220.1 |

*Table 65B: Summary Investment Plan for climate change Interventions*

| Ref. No. | Options   | Description of Intervention   | Yearly Cost Allocation (USD) |   |         |      | 2025 |
|----------|---|---|------------------------------|---|---------|------|------|
|          |   |   | 2020/2021                    | 2022  | 2023    | 2024 |      |
| 1.1.11   | Develop and implement climate change awareness creation strategy addressing sustainable land and environment management | -Conduct a holistic climate change capacity needs assessment<br><br>-Develop a climate change capacity building and training plan and program   | 200,000<br><br>20,000        |   |         |      |      |
| 1.1.12   | Promote climate change planning at sector, catchment and sub-catchment levels   | -Carry out a robust economic needs assessment in the most impacted sectors by climate change (agriculture, water, energy, infrastructure-roads, bridges, settlements)   |                              |   | 200,000 |      |      |
| 1.1.13   | Promote climate -smart -integrated landscape management approaches.   | -Plant flood resistant crop varieties<br><br>-Apply climate smart land use and building codes for private and public buildings.<br><br>-Invest in making existing and new buildings more resilient.<br><br>-Review and update to apply the climate smart transport codes<br><br>-Promote climate smart aquaculture practices<br><br>-Demarcate, gazette and restore wetland areas.<br><br>-Promote climate smart agro-forestry practices<br><br>-Climate proof investments of drainage plans and systems. |                              | 300,000<br><br>20,000<br><br>50,000,000<br><br>20,000<br><br>2,000,000<br><br>500,000<br><br>300,000<br><br>500,000 |         |      |      |

|        |   |   |            |  |  |  |  |
|--------|---|---|------------|--|--|--|--|
|        | -Construct early warning and climate information systems  |   | 20,000     |  |  |  |  |
|        | -Develop emergency response measures and recovery centres in the most vulnerable areas  |   | 100,000    |  |  |  |  |
|        | -Construct valley dams and tanks  |   | 10,000,000 |  |  |  |  |
|        | -Construct rain water harvesting infrastructure.  |   | 10,000,000 |  |  |  |  |
|        | -Plant flood resistant pastures for livestock.  |   | 10,000,000 |  |  |  |  |
|        | -Promote climate smart livestock breeds.  |   | 140,000    |  |  |  |  |
|        | -Promote community forest and national park groups.   |   | 500,000    |  |  |  |  |
|        | -Design and implement Ramsar site wetland research, eco-tourism and education centres   |   | 1,000,000  |  |  |  |  |
|        | -Establish a climate change fund to manage disasters and minimize risks   |   | 3,000,000  |  |  |  |  |
| 1.1.14 | Uptake of climate change and disaster risk reduction tools for joint planning and implementation of sustainable land and environmental technologies and practices at catchment and sub-catchment levels     | -Develop capacity building plan for the state and non-state climate change actors in climate change and disaster risk reduction tools | 10,000     |  |  |  |  |
| 1.1.15 | Build capacity of communities, land and environment users by supporting them in land suitability mapping, land use and farm planning, soil and water conservation activities in micro and macro watersheds. | -Develop GIS tools  | 10,000     |  |  |  |  |
|        |   | -Establish demonstration sites as models for best management practices in soil and farm management                                    | 600,000    |  |  |  |  |

| Ref. No. | Options  | Description of Intervention   | Yearly Cost Allocation (USD) |           |           |         |            |
|----------|--|---|------------------------------|-----------|-----------|---------|------------|
|          |  |   | 2020/2021                    | 2022      | 2023      | 2024    | 2025       |
| 1.1.17   | Undertake carbon stock assessment  | <ul style="list-style-type: none"> <li>-Conceptualization of the framework of the circular business models</li> <li>-Assess and measure the carbon stores and their stock changes in the land use patterns of forests, wetlands, crop lands and grasslands to gain carbon credits.</li> <li>-Compute and analyse greenhouse gas accounting</li> <li>-Take stock of natural and private capital assets of natural resources in the catchment.</li> <li>-Conduct a water balance</li> </ul> |                              | 50,000    | 200,000   | 200,000 | 200,000    |
| 1.1.18   | Conduct natural resource accounting for ecosystems in the catchment.   | <ul style="list-style-type: none"> <li>-Carry out green resource accounting of natural assets in the biota, land and water ecosystems</li> <li>-Encourage natural resource planning (inherent value of resources for GHG emissions, carbonstores, degradation and economic losses).</li> <li>-Encourage planting trees on private and public land</li> </ul>  |                              |           | 200,000   | 200,000 | 200,000    |
| 1.2.6    | Promote woodlots and agro-forestry   | <ul style="list-style-type: none"> <li>-Establish agro-forestry systems in the catchment</li> </ul>   |                              |           | 3,000,000 |         | 24,000,000 |
| 1.2.7    | Build capacity and promote use of practices for managed regeneration of wetland and indigenous trees to increase tree cover in degraded catchment and sub-sub-catchment areas. | <ul style="list-style-type: none"> <li>-Encourage tree planting and regeneration on public and private land</li> </ul>  |                              | 1,500,000 |           |         |            |

|       |   |  |         |  |
|-------|---|--|---------|--|
|       | -Establish community wetland and forestry groups  |  | 500,000 |  |
|       | -Strength the capacity and training of institutions dealing in wetland and forest management and development in the catchment |  | 100,000 |  |
| 1.3.6 | Promote water catchment, wetlands and lake systems through integrated watershed management                                    | -Strengthen wetland and lake management institutions respond for wetland and lake management and conservation              | 100,000 |  |
|       |   | -Promote wetland and lake law enforcement and governance   | 100,000 |  |
|       |   | -Demarcation and gazetttement of critical and vital wetland systems and their maintenance in the catchment as carbon sinks | 100,000 |  |
|       |   | -Design and implementation of RAMSAR sites and framework wetland and lake management plans                                 | 100,000 |  |
|       |   | -Design and implementation of the district wetland action plans in the catchment with carbon sink potential                | 200,000 |  |
|       |   | -Design and implementation of RAMSAR site wetland research, ecotourism and education centres                               | 200,000 |  |
|       |   | -Creation of catchment information database through re-inventory and assessment of all wetlands in the catchment           | 200,000 |  |
| 1.3.7 | Promote payment for ecosystem services for enhanced ecosystem management and benefits   | -Strengthen wetland and lake management institutions respond for wetland and lake management and conservation              | 100,000 |  |
|       |   | -Promote wetland and lake law enforcement and governance   | 100,000 |  |

| Ref. No. | Options                  | Description of Intervention  | Yearly Cost Allocation (USD) |      |         |         |
|----------|--------------------------|--|------------------------------|------|---------|---------|
|          |                          |  | 2020/2021                    | 2022 | 2023    | 2024    |
|          |                          | -Demarcation and gazetttement of critical and vital wetland systems and their maintenance in the catchment as carbon sinks | 100,000                      |      |         |         |
|          |                          | -Design and implementation of RAMSAR site wetland research, ecotourism and education centres                               |                              |      | 200,000 |         |
|          |                          | -Creation of catchment information database through re-inventory and assessment of all wetlands in the catchment           |                              |      | 200,000 |         |
|          | Buffer Zone Set – asides | -Strengthen wetland and lake management institutions respond for wetland and lake management and conservation              |                              |      | 100,000 |         |
|          |                          | -Promote wetland and lake law enforcement and governance   |                              |      | 100,000 |         |
|          |                          | -Demarcation and gazetttement of critical and vital wetland systems and their maintenance in the catchment as carbon sinks |                              |      | 100,000 |         |
|          |                          | -Design and implementation of RAMSAR sites and framework wetland and lake management plans                                 |                              |      | 100,000 |         |
|          |                          | -Design and implementation of the district wetland action plans in the catchment with carbon sink potential                |                              |      | 200,000 |         |
|          |                          | -Design and implementation of RAMSAR site wetland research, ecotourism and education centres                               |                              |      |         | 200,000 |
|          |                          | -Creation of catchment information database through re-inventory and assessment of all wetlands in the catchment           |                              |      |         | 200,000 |

| <b>2.8 Enhancement of irrigation</b>  |  |   |   |   |    |    |    |    |    |    |    |    |    |
| 2.8.1                                 | Provide farmers with appropriate technologies for the abstraction of water from rivers and shallow boreholes. This would include facilitating access to treadle pumps and small motorised pumps and the construction of small diversion weirs. Prioritise the drier areas of Kapchonwa and Kween on the leeward side of Mt. Elgon, Karamoja and Teso | 4 | 5 | 5 | -2 | 0  | -1 | 2  | 1  | -1 | 0  | -1 | 17 |
| 2.8.2                                 | Enhancement of rainfed agriculture   | 5 | 5 | 5 | -1 | 0  | 0  | 3  | 3  | 1  | 2  | 3  | 31 |
| 2.8.3                                 | New irrigation schemes: undertake feasibility studies of identified areas  | 3 | 3 | 2 | 2  | -4 | 1  | -2 | 2  | 3  | -2 | 0  | 2  |
| 2.8.4                                 | Construction of new irrigation schemes: Improved (seasonal) Wetland Schemes  | 2 | 3 | 3 | -5 | 0  | -1 | 2  | 3  | 1  | -3 | -1 | 7  |
| 2.8.5                                 | Construction of new irrigation schemes: low-power pumped schemes that utilize water from nearby rivers, swamps and lakes   | 4 | 5 | 4 | -4 | 0  | -2 | 2  | 2  | 1  | 2  | 1  | 20 |
| 2.8.6                                 | Construction of new irrigation schemes: simple gravity-fed schemes   | 4 | 5 | 4 | -4 | 0  | -2 | 2  | 2  | 1  | 2  | 1  | 20 |
| 2.8.7                                 | Construction of new irrigation schemes: Type A formal Irrigation   | 4 | 5 | 3 | -4 | -3 | 0  | -2 | -2 | -2 | 3  | 0  | 8  |
| 2.8.8                                 | Construction of new irrigation schemes: Type B formal Irrigation   | 4 | 5 | 3 | -3 | 0  | -1 | -3 | -4 | -2 | 3  | 0  | 5  |
| <b>2.9 Water use efficiency</b>       |  |   |   |   |    |    |    |    |    |    |    |    |    |
| 2.9.1                                 | Water efficiency evaluation and recommendations  | 2 | 2 | 2 | 3  | 0  | 5  | 0  | 2  | 3  | 0  | 2  | 3  |
| <b>2.10 Small hydropower</b>          |  |   |   |   |    |    |    |    |    |    |    |    |    |
| 2.10.1                                | Investment and implementation in hydropower installations and grid distribution  | 1 | 5 | 3 | 5  | -1 | 1  | -1 | 2  | 3  | 3  | 0  | 3  |
| <b>2.11 Alternative energy supply</b> |  |   |   |   |    |    |    |    |    |    |    |    |    |
| 2.11.1                                | Promote additional and alternative sources of energy including low cost solar panels to be used for LED lighting, radios and cell phones   | 3 | 3 | 5 | 3  | 0  | 0  | 0  | -2 | 3  | -1 | 0  | 0  |
| 2.11.2                                | Promote use of energy efficient woodstoves by making the technology readily available  | 5 | 5 | 5 | 3  | 0  | 5  | 0  | -2 | 3  | -1 | 3  | 3  |
| <b>2.12 Aquaculture</b>               |  |   |   |   |    |    |    |    |    |    |    |    |    |
| 2.12.1                                | Develop a manual on aquaculture techniques (building on available material)  | 3 | 3 | 1 | 1  | 0  | 0  | 0  | 2  | 4  | -1 | 0  | 5  |
| 2.12.2                                | Assist farmers with the rehabilitation of viable aquaculture ponds and in the construction of new ponds - allowance made for a pilot   | 3 | 3 | 3 | 3  | -3 | 3  | -1 | 2  | 1  | -1 | 0  | 3  |

|   |  | Screened Totals for Sub-options |  |      |                              |     |  |     |  |
|---|--|---------------------------------|--|------|------------------------------|-----|--|-----|--|
|   |  | 2.12.3                          | Train and assist farmers on the appropriate fishing techniques and equipment as well as the protection of breeding grounds                 | 2.13 | Socio-economic strengthening | 3.1 | Flood management and preparedness for floods | 3.2 | Construction of infrastructure for flood control |
|   |  | No                              | Option / Sub-option  |      |                              |     |  |     |  |
| Sustainability                                |  |                                 | Definite long-term sustainability (5)<br>Sustainable (3) Uncertain-it depends (0)<br>Short-term only (-3)<br>Most unlikely (-5)            |      |                              |     |  |     |  |

## ANNEX 2 – Intervention Lists

### INTERVENTION SITES FOR THE OPTIONS

#### District: AMUDAT

| Ref. No. | Options   | District | Sub-county | Parish      | Village   | Type of structure  | No of structures                               | Sub-county | Parish | Village |
|----------|---|----------|------------|-------------|---|--|--|------------|--------|---------|
| 1.1.1    | The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja catchment and Kyoga WMZ   | Amudat   | N/A        | N/A         | N/A   | N/A  | N/A  |            |        |         |
| 1.1.2    | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | Amudat   | Karita     | Naporokocha | Road design, woodlots and agro forestry, bridges for access | 120 km from the main road, 10 hectares in each village, 3 bridges  | 1  | 3          | 8      |         |
| 1.1.3    | Identification and regular (annually) eradication of floating islands / invasive alien plants   | Amudat   | N/A        | N/A         | N/A   | N/A  | N/A  | n/a        | n/a    | n/a     |
| 1.1.4    | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | Amudat   | Karita     | Lokales     | Kokwachaiya   | Fire fighting equipment (fire extinguishers etc.), recruit and train fire fighters, develop a fire management plan, raise public awareness | 24 fire fighters (3 per village in 2 quarters) | 1          | 3      | 8       |

| Ref. No. | Options  | District | Sub-county | Parish  | Village   | Type of structure   | No. of structures   | Sub-county | Parish | Village |
|----------|--|----------|------------|---------|---|---|---|------------|--------|---------|
| 1.1.5    | River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation   | Amudat   | Karita     | Lokales | Lokales<br>Lomamchche<br>Moru-arengan   | Construction of gabions, tree planting along the riverbanks and Chepkararat seasonal rivers, stone pitching of cattle access points | 20 sq.km tree planting, gabions (45 km), seasonal rivers 15 km, stone pitching of cattle access points (7 sq.km), 1 by-law  | 1          | 3      | 7       |
| 1.1.8    | Ecological water requirements: Revisiting legislation and catchment assessment   | Amudat   | N/A        | N/A     | N/A   | N/A   | N/A   | n/a        | n/a    | n/a     |
| 1.1.8.1  | Introduce improved farming practices   | Amudat   | Karita     | Lokales | Lwakai<br>Karita<br>Lokales<br>Lomamcheche<br>Amuna<br>Kaichom<br>Karita<br>Naporolocha<br>Kanyerus | Use of fertilisers, build stores (cylos), use of ox ploughs, tractors, improved seeds   | 5 irrigation schemes per village, 50 friesian cattle introduced, stores/granaries (fire proof stores) (5 par village), improved seeds, tractors for an association to rent it out to farmers, 10 ox ploughs per village | 1          | 2      | 9       |
| 1.1.9    | Build the capacity on conservation methods, especially for wetlands  | Amudat   | Karita     | Lokales | Karita  | Build capacity in SCs and parishes of environmental committees, assist communities to develop environmental actions plans           | 40 people, 10 par parish: training of community members (30 par parish)   | 1          | 2      |         |
| 1.1.10   | Monitoring the impacts of sustainable land and environmental management in terms of improved farming practices (individual benefits) and downstream water management | Amudat   | Karita     | Karita  | All targeted villages   | Monitoring visits, Community monitoring meetings  |   | 1          | 2      |         |
| 1.2.1    | Provide routine training (forestry handbook) to CMCs, forest management, land care and agricultural managers: 1 training in each district @ 2 yrs                    | Amudat   | N/A        | N/A     | N/A   | N/A   | n/a   | n/a        | n/a    | n/a     |

|       |  |        |        |         |             |  |   |     |     |     |
|-------|--|--------|--------|---------|-------------|--|---|-----|-----|-----|
| 1.2.2 | Establish nurseries for provision of seedling and establish distribution, training and management systems in all districts - pilot projects  | Amudat | Karita | Lokales | Lomamcheche | 3 nurseries  | 1 nursery per village                             | 1   | 3   | 3   |
| 1.2.3 | Support the implementation of a reforestation programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land management | Amudat | Karita | Lokales | Lomamcheche | Reforestation, woodlots  | 3 areas of reforestation and 5 places of woodlots | 1   | 3   | 6   |
| 1.2.4 | Planting trees in degraded areas   | Amudat | Karita | Karita  | Naporochoch | Trees: Neem, guruvira, acacia, teak, dryland eucalyptus etc.                                   | 2 ha per village                                  | 1   | 2   | 7   |
| 1.3.1 | Regular updating of district wetland inventories by districts  | Amudat | Karita | Lokales | Greek       | Establish inventory  | 1 quarterly update                                | 1   | 2   | 3   |
| 1.3.2 | Updating of demarcated protection zones and acceptable utilization of wetlands, producing GIS maps of wetlands at various levels   | Amudat | Karita | Karita  | All         | GPS handsets, laptop, computers, updating of zones   | 3 handsets, 3 laptops                             | 1   | 3   | 15  |
| 1.3.3 | Study for economic valuation of wetland resources and disseminate the results  | Amudat | N/A    | N/A     | N/A         | N/A  | N/A   | n/a | n/a | n/a |
| 1.3.4 | Review and update the wetland management / action plans  | Amudat | Karita | Lokales | Greek       | Conduct quarterly review meetings, review draft action plan for Greek, develop plan for Lokoma | 4 in a year                                       | 1   | 2   | 2   |

| Ref. No. | Options   | District | Sub-county | Parish  | Village             | Type of structure  | No.of structures   | Sub-county | Parish | Village |
|----------|---|----------|------------|---------|---------------------|--|--|------------|--------|---------|
| 1.3.5    | Restoration of vital (unique) critical (subject to on-going degradation) wetlands   | Amudat   | Karita     | Lokales | Lomamcheche         | Create community awareness, plant trees, law enforcement and by-laws | 2 villages for awareness creation, 2 wetlands restored                                     | 1          | 2      | 2       |
| 1.4.1    | Mapping, demarcation of riparian and roadside protection zones and identify and implement source protection measures  | Amudat   | Karita     | Karita  | Naporokocha         | GPS, GIS system, maps, signposts, laptops, pillars                   | 3 handsets, 1 GIS, 2 signposts, 3 laptops  | 1          | 3      | 4       |
| 2.1.1    | Improve sanitation technology and building material support and implement them  | Amudat   | Karita     | Losidok | Chepkararat River   | Pit latrines, hand washing facilities, awareness creation            | 8 pit latrines (4stance plus urinal) per village and 8 hand washing facilities per village | 1          | 3      | 9       |
| 2.1.2    | Improve faecal sludge management (collection, transportation, treatment and re-use) through clustering of small towns (Kumi, Sironko, Kapchorwa, Nakapiripirit) | Amudat   | N/A        | N/A     | N/A                 | N/A  | N/A  | n/a        | n/a    | n/a     |
| 2.2.2    | Refurbish valley dams and tanks   | Amudat   | Karita     | Karita  | Kaicho (valley dam) | Valley dam   | 1  | 1          | 1      | 1       |
| 2.3.1    | Design and construct river Agu scheme to supply Kumi and surroundings - water and wastewater works  | Amudat   | N/A        | N/A     | N/A                 | N/A  | N/A  | n/a        | n/a    | n/a     |
| 2.3.2    | Soroti treatment and distribution - expand in stages (NWSC)   | Amudat   | N/A        | N/A     | N/A                 | N/A  | N/A  | n/a        | n/a    | n/a     |
| 2.6.1    | Feasibility studies and design of prioritised sand dams. Construction, with cooperation and input from local communities  | Amudat   | Karita     | Karita  | Karita              | Construction of sand dams  | 3 sand dams  | 1          | 1      | 3       |

|       |  |        |        |         |                       |  |                        |     |     |     |     |
|-------|--|--------|--------|---------|-----------------------|--|------------------------|-----|-----|-----|-----|
| 2.7.1 | Needs identification for location and type of dams and associated abstraction facilities   | Amudat | N/A    | N/A     | N/A                   | N/A  | N/A                    | N/A | n/a | n/a | n/a |
| 2.7.2 | Feasibility & design of prioritized dams for stock water-ing and humans needs. Construction, with cooperation and input from local communities | Amudat | Karita | Karita  | Lokom                 | This area receives moderate rainfall   | 2 dams                 | 1   | 1   | 1   | 2   |
| 2.8.2 | Enhancement of rain fed agriculture  | Amudat | Karita | Lokales | Kakoron               | Treadle pumps, Sprinkler irrigation, introduce short term and drought resistant crops, training of farmers | 20 farmers per village | 1   | 1   | 1   | 6   |
| 2.8.3 | New irrigation schemes: Undertake feasibility studies of identifies areas  | Amudat | Karita | Lokales | Narukanes             | Feasibility studies  | 5 schemes              | 1   | 2   | 2   | 5   |
| 2.8.4 | Construction of new irrigation schemes: Improved (se-sonal) Wetlands Schemes   | Amudat | Karita | Karita  | Lokales               | Lomamcheche  | 5 schemes              | 1   | 2   | 2   | 5   |
| 2.8.5 | Construction of new irrigation schemes: Low - power pumped schemes that utilize water from nearby rivers, swamps and lakes                     | Amudat | Karita | Karita  | Naporokocha           | Naporokocha  | 5 schemes              | 1   | 2   | 2   | 5   |
| 2.8.6 | Construction of new irrigation schemes: Simple gravi-ty-fed schemes.   | Amudat | N/A    | N/A     | Lokales (Greek River) | Construction of new irrigation scheme  | 1 scheme               | 1   | 1   | 1   | 1   |
| 2.8.7 | Construction of new irrigation schemes: Type A Formal Irrigation.  | Amudat | N/A    | N/A     | N/A                   | N/A  | N/A                    | n/a | n/a | n/a | n/a |
| 2.8.8 | Construction of new irrigation schemes: Type B formal irrigation Formal Irrigation   |        | N/A    | N/A     | N/A                   | N/A  | N/A                    | n/a | n/a | n/a | n/a |
| 2.9.1 | Water efficiency evaluation and recommendations  | Amudat | N/A    | N/A     | N/A                   | N/A  | N/A                    | n/a | n/a | n/a | n/a |

| Ref. No. | Options  | District | Sub-county | Parish  | Village   | Type of structure   | No. of structures   | Sub-county | Parish | Village |
|----------|--|----------|------------|---|---|---|---|------------|--------|---------|
| 2.10.1   | Investment and implementation in hydropower installations and grid distribution  | Amudat   | N/A        | N/A   | N/A   | N / A   | N / A   | n/a        | n/a    | n/a     |
| 2.11.1   | Promote additional and alternative sources of energy including low cost solar panels to be used for LED lighting, radios and cell phones | Amudat   | Karita     | Lokales   | Lwakai<br>Naporokocha<br>Lokales<br>Lomamcheche<br>Amuna<br>Karita<br>Kaichom<br>Kanyerus | Solar panels,<br>biogas for trading<br>centres ie Karita<br>T/C, Lokales T/C,<br>Chepatpoyo T/C,<br>Cheptakoratic T/C | 4 primary schools,<br>4 trading centres, 3<br>health units  | 1          | 2      | 8       |
| 2.11.2   | Promote use of energy efficient woodstoves by making the technology readily available  | Amudat   | Karita     | Karita<br>Amuna<br>Naporokocha<br>Kanyerus<br>Lwakai<br>Lokales | Kaichom<br>Karita<br>Amuna<br>Naporokocha<br>Kanyerus<br>Lwakai<br>Lokales                | Training of women<br>to make energy<br>saving stoves, pro-<br>vision of tool kits,<br>awareness raising               | 5 groups of women<br>per parish, 14 tool<br>kits per parish | 1          | 2      | 7       |
| 2.12.1   | Develop a manual on aquaculture techniques (building on available material)  | Amudat   | N/A        | N/A   | N / A   | N / A   | N / A   | n/a        | n/a    | n/a     |
| 2.12.2   | Assist farmers with rehabilitation of viable aquaculture ponds and in the construction of new ponds - allowance made for a pilot         | Amudat   | Karita     | Lokales   | Lomamcheche   | Construction of new<br>ponds  | 1 new pond  | 1          | 1      | 1       |
| 2.12.3   | Train and assist farmers on the appropriate fishing techniques and equipment as well as the protection of breeding grounds               | Amudat   | N / A      | N / A   | N / A   | N / A   | N / A   | n/a        | n/a    | n/a     |

|        |   |        |        |         |  |   |  |         |
|--------|---|--------|--------|---------|--|---|--|---------|
|        |   |        |        |         |  |   |  |         |
| 2.13.1 | Create an ecological tourism organisation, train it and provide the necessary starting equipment e.g a boat | Amudat | Karita | Lokales | Lomamcheche<br>Arukanes<br>Lokales<br>Agule<br>Naoporokocha<br>Kaichom | Create and build capacity of CBOs, build camps, train guides                                  | 4 well equiped camp-sites, 4 cameras, 4 binoculars, 2 capacity buildings of CBOs and guides, 4 guide books | 1 2 6   |
| 2.13.2 | Promote horticulture  | Amudat | Karita | Lokales | Lokales<br>Agule<br>Kakoron<br>Kaichom                                 | Vegetable gardens, introduction of good seeds   | 20 farmers per village   | 1 2 4   |
| 2.13.3 | Promote bee keeping   | Amudat | Karita | Karita  | Kaichom<br>Karita<br>Amuna<br>Lwakai<br>Lomamcheche<br>Kanyerus        | Beehives, value addition, harvesting, processing and packaging equipment, train farmer groups | 600 beehives, 60 pcs of harvesting gear, training of 12 farmer groups                                      | 1 2 6   |
| 3.1.1  | Demarcate areas considered unsafe for habitation or other use and warn inhabitants                          | Amudat | Karita | Lokales | Naporokocha<br>Lokoma<br>Arukanes<br>Agule<br>Lomamcheche              | Discussion with people of settlement in game reserve  | 1 1 5  |         |
| 3.1.2  | Develop an early flood warning system   | Amudat | Karita | Lokales | Lokales<br>Agule<br>Arukanes<br>Kakoron<br>Moruakuruk<br>Lomamcheche   | Early warning systems   | 6  | 1 1 6   |
| 3.1.3  | Development / Compilation of hazard / risk map for landslides / sedimentation / floods                      | Amudat | N/A    | N/A     | N/A  | N/A   | N/A  | n/a n/a |

| Ref. No. | Options  | District | Sub-county | Parish  | Village                     | Type of structure  | No.of structures   | Sub-county | Parish | Village |
|----------|--|----------|------------|---|-----------------------------|--|--|------------|--------|---------|
| 3.3.1    | Determine current stocking rates and assess carrying capacity of all districts. Develop a plan to keep the numbers of animals within the theoretical limits of carrying capacity | Amudat   | N/A        | N/A   | N/A                         | N/A  | N/A  | n/a        | n/a    | n/a     |
| 3.3.2    | Livestock improvement programme  |          | Lokales    | Lomamcheche<br>Lokales<br>Karita<br>Kaichom   | Lokales<br>Karita<br>Lokoma | Cattle crutches, veterinary services, vaccination equipment, artificial insemination, cross breeding, demosite for teak control and awareness raising, tssetse fly control: traps and chemicals (2 demosites and awareness raising | 5 cattle crutches, 2 demo sites for tssetse fly and teak control each, training of 1 person / SC on artificial insemination, train and equip community and animal health workers | 1          | 2      | 5       |
| 3.3.3    | Promote dairy farming  |          | Karita     | Kaichom<br>Karita<br>Amuna<br>Naporotocha<br>Lwakai<br>Lokales<br>Lomamcheche<br>Kanyerus | Karita<br>Lokales           | Improve on breeds, teak control, tssetse and worm control, training of communities on management of zero grazing, pasture and ranching (16 people), training on making yoghurt, ghee etc. (16 people)                              | Trainings: 2 x 16 people, mini coolers, 50 cross bred cattle   | 1          | 2      | 8       |
| 4.1.1    | Monitoring stations must be maintained and regularly calibrated. Gauge readers need to be trained and check mechanisms introduced to ensure stability and consistency in data    | Amudat   | N/A        | N/A   | N/A                         | N/A  | N/A  | n/a        | n/a    | n/a     |

|       |   |        |        |         |        |  |  |     |     |     |     |
|-------|---|--------|--------|---------|--------|--|--|-----|-----|-----|-----|
| 4.1.2 | Expand, rehabilitate, and improve the water quality, evaporation, rainfall, ground water and streamflow monitoring network systems systems and lake and wetland water level monitoring gauges. Implement sedimentation monitoring | Amudat | N / A  | N / A   | N / A  | N / A  | N / A  | n/a | n/a | n/a | n/a |
| 4.1.3 | Monitor surface and ground water use and levels to prevent over - exploitation  | Amudat | N / A  | N / A   | N / A  | N / A  | N / A  | n/a | n/a | n/a | n/a |
| 4.2.1 | Train a committed cadre of extension service providers to render inter - disciplinary, integrated extension service to include CM/Cs, CDOs etc.   | Amudat | Karita | Lokales | Karita | Train committed cadres   | 3 (1 per parish)   | 1   | 3   |     |     |
| 4.2.2 | Develop support materials for use by extension officers (building on currently available materials)   | Amudat | N / A  | N / A   | N / A  | N / A  | N / A  | n/a | n/a | n/a | n/a |
| 4.3.1 | Develop training guidelines and awareness raising materials (building on currently available materials)   | Amudat | N / A  | N / A   | N / A  | N / A  | N / A  | n/a | n/a | n/a | n/a |
| 4.3.2 | Introduction of a community radio programme dedicated to environmental matters  | Amudat | Karita | Lokales | Karita | Develop a radio station for Amudat, community radio programmes, radio listening clubs      | 1 radio station, 3 (1 per parish)  | 1   | 3   | 3   |     |
| 4.3.3 | Sanitation project. Demonstration of ecosan and other sanitation systems. Provision of appropriate designs and training in construction. Support with provision of materials  | Amudat | Karita | Karita  | Karita | Kaitchom<br>Karita<br>Amuna<br>Naporokocha<br>Lwakai<br>Lomamcheche<br>Lokales<br>Kanyerus | Train on waste management of disposal at household level on human waste, awareness raising | 1   | 2   | 8   |     |
| 4.3.4 | Implement demonstration projects - schools, model farms etc. (capital costed elsewhere)   | Amudat | Karita | Lokales | Kaita  | Lokales P/S farms  | Model schools  | 2   | 1   | 2   | 2   |
| 4.3.5 | Introduction of awareness raising programmes in schools.  | Amudat | Karita | Lokales | Karita | Awareness raising  | 3  | 1   | 3   | 3   |     |

## INTERVENTION SITES FOR THE OPTIONS

District: BUKEDEA

| Options   | District | Sub-county | Parish | Village | Type of structure   | No.of structures  |
|---|----------|------------|--------|---------|---|---|
| The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja catchment and Kyoga WMZ   | Bukedea  | N/A        | N/A    | N/A     | N/A   | N/A   |
| Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | Bukedea  | Kachumbala | Aligoi |         | Soil and water conservation structures, woodlots and agroforestry | 10 ha of soil & water conservation structures, 7 ha of woodlots and 10 ha of agroforestry |
| Identification and regular (annual) eradication of floating islands/ invasive alien plants  | Bukedea  | N/A        | N/A    | N/A     | N/A   | N/A   |
| Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | Bukedea  | N/A        | N/A    | N/A     | N/A   | N/A   |

|  |   |  |   |   |
|--|---|--|---|---|
| River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation   | Bukedea<br>Bukedea<br>Kidongole                                 | Kolir<br>Akuoro<br>Suula   | Komongomei<br>Akou Etom   | Gabions for 100 m in each village, 2 cattle access points per village   |
| Ecological water requirements: revisiting legislation and catchment assessment   | Bukedea   | N/A  | N/A   | N/A   |
| Introduce improved farming practices   | Bukedea   | Kachumbala<br>Kotia  | Akwarikwar<br>Kotia   | Organic farming (compost & slurry), field ditches, hedgerows, strip ban |
|  |   |  | Akwarikwar  | Agroforestry & zero grazing   |
|  | Kidongole   | Kajamaka   | Kalupo  | Hedgerows, strip bans   |
|  |   | Katekwani  | Katekwani   | 20 households   |
|  |   | Koena  | Koena   | Cattle tracks   |
|  |   |  |   | 5   |
|  |   |  |   | 10 ha respectively  |
| Build the capacity on conservation methods, especially for wetlands  | Bukedea<br>Bukedea<br>Bukedea<br>Bukedea<br>Bukedea             | Kachumbala HQ<br>Bukedea TC<br>Kolir HQ<br>Malera HQ<br>Bukedea HQ   |   | Training of environmental committees in wetlands on wetland management  |
|  |   |  |   | 60 people per S/C (1 committee per SC)                                  |
| Monitoring the impacts of sustainable land and environmental management in terms of improved farming practices (individual benefits) and downstream water management | Bukedea   | N/A  | N/A   | N/A   |
| Provide routine training (forestry handbook) to CMCs, forest management, land care and agricultural managers: 1 training in each district @ 2 yrs                    | Bukedea   | N/A  | N/A   | N/A   |
| Establish nurseries for provision of seedling and establish distribution, training and management systems in all districts - pilot projects                          | Bukedea<br>Bukedea<br>Bukedea<br>Bukedea<br>Kidongole<br>Malera | Bukedea HQ<br>Kolir<br>Emokori<br>Kachumbala<br>Kidongole<br>Kabarwa | Kamon<br>Kolir<br>Emokori<br>Kachumbala<br>Kidongole<br>Kabarwa | Nurseries<br>1 nursery per village                                      |

| Options  | District | Sub-county          | Parish  | Village  | Type of structure   | No. of structures                             |
|--|----------|---------------------|---|--|---|---|
| Support the implementation of a reforestation programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land management | Bukedea  | Bukedea HQ<br>Kolir | Kamon<br>Kolir  | Kamon<br>Kolir   | Capacity building, woodlots, tree planting  | 30 ha per village, 6 community sensitisations |
| Planting trees in degraded areas   | Bukedea  | Kachumbala          | Emokori<br>Kachumbala<br>Kidongole<br>Malera                    | Kachumbala<br>Kachumbala<br>Kabarwa  | Kachumbala<br>Kachumbala  | Tree seedlings                                |
| Regular updating of district wetland inventories by districts  | Bukedea  | Bukedea HQ<br>Kolir | Kamon<br>Emokori B  | Kamon wetland<br>Kolir wetland   | GIS Software, GPS, procurement of computers, water proof ware   | 30 ha   |
|  |          | Bukedea TC          | Anyebo wetland<br>Oswapai<br>Okunguro<br>Emokori                | Anyebo wetland<br>Oswapai wetland<br>Obiro wetland<br>Emokori wetland          | Wetland inventory exists, but requires updating   |   |
|  |          |                     | Kachumbala<br>Kidongole<br>Malera                               | Kachumbala<br>Kobori<br>Katekwan<br>Kidongole<br>Kotikot<br>Kabarwa            | Kachumbala wetland<br>Kobori wetland<br>Katekwan wetland<br>Kidongole wetland<br>Aakol wetland<br>Kabarwa wetland |   |
| Updating of demarcated protection zones and acceptable utilization of wetlands, producing GIS maps of wetlands at various levels   | Bukedea  | Bukedea TC          | Emokori B<br>Oswapai<br>Okunguro<br>Kobori<br>Kotikot<br>Malera | Anyebo wetland<br>Oswapai<br>Obiro wetland<br>Katekwan<br>Aakol wetland<br>N/A | Provide GIS Software, GPS, computers for updating of the demarcated zones   | Update demarcations                           |
| Study for economic valuation of wetland resources and disseminate the results  | Bukedea  | N/A                 | N/A   | N/A  | N/A   | N/A   |

|  |                   |                                    |   |   |  |            |
|--|-------------------|------------------------------------|---|---|--|------------|
| Review and update the wetland management / action plans  | Bukedeaa<br>Kolir | Bukedeaa HQ<br>Kolir               | Kamon<br>Kolir  | Kamon wetland<br>Kolir wetland  | Need for review of the action plans  | 1 per S/C  |

## INTERVENTION SITES FOR THE OPTIONS

### District: KAPCHORWA

| Ref. No. | Options   | District  | Sub-county   | Parish            | Village                         | Type of structure   | No.of structures  | Sub-county | Parish | Village |
|----------|---|-----------|--------------|-------------------|---------------------------------|---|---|------------|--------|---------|
| 1.1.1    | The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja catchment and Kyoga WMZ   | Kapchorwa | N/A          | N/A               | N/A                             | N/A   | N/A   | n/a        | n/a    | n/a     |
| 1.1.2    | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | Kapchorwa | Kap-chesombe | Kwoti             | Kamagunga<br>Teryet             | Woodlots, trees around the home and gardens, agroforestry, trees along the parish and SC roads, contour bunds and grass planting and trees along the contours | 110 km of contour bunds, 11 wood-lots (1 ha per village)  | 4          | 5      | 11      |
| 1.1.3    | Identification and regular (annually) eradication of floating islands / invasive alien plants   | Kapchorwa | N/A          | N/A               | N/A                             | N/A   | N/A   | n/a        | n/a    | n/a     |
| 1.1.4    | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | Kapchorwa | N/A          | N/A               | N/A                             | N/A   | N/A   | n/a        | n/a    | n/a     |
| 1.1.5    | River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation  | Kapchorwa | Kap-chesombe | Kaplak<br>Kongowo | Kaplak<br>Kaptokolo<br>Chesabit | Gabions, live - markers as demarcations, tree planting  | River Atari - 4 km with 2 cattle access points, Kaplak stream - 1 km with 1 cattle access point in Kapchesosombe, River Sipi - 5 km with 2 cattle access points in Kapsinda | 2          | 3      | 4       |
|          |   | Kapsinda  | Sengwel      |                   | Kapsep                          |   |   |            |        |         |

|         |  |           |   |   |  |   |  |     |     |     |
|---------|--|-----------|---|---|--|---|--|-----|-----|-----|
| 1.1.8   | Ecological water requirements: Revisiting legislation and catchment assessment   | Kapchonwa | N/A                                     | N/A   | N/A  | N/A   | N/A  | n/a | n/a | n/a |
| 1.1.8.1 | Introduce improved farming practices   | Kapchonwa | Kwoti<br>Kapchesombe                    | Kween<br>Cheptuya   | Kween<br>Kapchemokok<br>Kapteka  | Contour bunds, trenches, planting trees, napier grass, mulching | Train 10 farmers per village   | 3   | 4   | 5   |
| 1.1.9   | Build the capacity on conservation methods especially for wetlands   | Kapchonwa | Kapsinda<br>Gamogo                      | Kiring<br>Kapnarbababa  | Kiring<br>Kapnarbababa   | Training manuals  | 20 copies of training manuals, train community members in each village | 2   | 4   | 4   |
| 1.1.10  | Monitoring the impacts of sustainable land and environmental management in terms of improved farming practices (individual benefits) and downstream water management | Kapchonwa | N/A                                     | N/A   | N/A  | N/A   | N/A  | n/a | n/a | n/a |
| 1.2.1   | Provide routine training (forestry handbook) to CMCs, forest management, land care and agricultural managers: 1 training in each district @ 2 yrs                    | Kapchonwa | N/A                                     | N/A   | N/A  | N/A   | N/A  | n/a | n/a | n/a |
| 1.2.2   | Establish nurseries for provision of seedlings and distribution, training and management systems in the district - pilot projects                                    | Kapchonwa | Kwoti<br>Kapsinda<br>Kawowo<br>Kaptanya | Kamakunga<br>Kaplak<br>Tuyobei<br>Kapsabuko<br>Sanzara<br>Kaptokwoi<br>Tumboboi | Kamakunga<br>Kaplak<br>Kibort<br>Kapkweime<br>Chemarey<br>Kaptokwoi<br>Kaplongon | Tree nursery<br>1 nursery per village                           | 4  | 7   | 7   |     |

| Ref. No. | Options  | District  | Sub-county | Parish                | Village                         | Type of structure  | No. of structures   | Sub-county  | Parish | Village |
|----------|--|-----------|------------|-----------------------|---------------------------------|--|---|---|--------|---------|
| 1.2.3    | Support the implementation of a reforestation programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land management | Kapchonwa | Kaptanya   | Tumboboi              | Sweswet<br>Cheptilai            | Tree nurseries, inventory reports, establish woodlots and agroforestry | 8 tree nurseries, 1 ha woodlot per village, 1 ha agroforestry per village | 4   | 6      | 8       |
| 1.2.4    | Planting trees in degraded areas   | Kapchonwa | Kapteret   | Kapangury<br>Ngangata | Kapengurya<br>Moron<br>Chemuron |  |   |   |        |         |

| 4.2.1 | Train a committed cadre of extension service providers to render inter - disciplinary, integrated extension service to include CMCs, CDOs etc.  | Napak | N/A            | N/A            | N/A   | N/A   | N/A | n/a  | n/a    | n/a |
| 4.2.2 | Develop support materials for use by extension officers (building on currently available materials)   | Napak | N/A            | N/A            | N/A   | N/A   | N/A | n/a  | n/a    | n/a |
| 4.3.1 | Develop training guidelines and awareness raising materials (building on currently available materials)   | Napak | N/A            | N/A            | N/A   | N/A   | N/A |  |        |     |
| 4.3.2 | Introduction of a community radio programme dedicated to environmental matters  | Napak |                |                |   |   |     | Quarterly radio talk shows and radio spot messages, provision of IEC materials with key environmental messages for dissemination, establish a radio station in Napak | 4 p.a. |     |
| 4.3.3 | Sanitation project. Demonstration of ecosan and other sanitation systems. Provision of appropriate designs and training in construction. Support with provision of materials  | Napak | Lorengecora TC | Lorengecora TC | Equipment of rubbish skips, awareness raising and training of communities, empower sanitation groups, study for collapsible soil (black cotton soil) to improve the toilet problem, removable slabs | 2 rubbish skips, 1 awareness raising campaign, 1 training of communities, 1 study | 1   | 1  | 1      |     |

## **INTERVENTION SITES FOR THE OPTIONS**

|          |   | District: NGORA |            |          |           |  |                        |            |        |         |
|----------|---|-----------------|------------|----------|-----------|--|------------------------|------------|--------|---------|
| Ref. No. | Options   | District        | Sub-county | Parish   | Village   | Type of structure  | No.of structures       | Sub-county | Parish | Village |
| 1.1.1    | The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja catchment and Kyoga WMZ   | Ngora           | N/A        | N/A      | N/A       | N/A  | N/A                    | N/A        | N/A    | N/A     |
| 1.1.2    | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | Ngora           | Mukura     | Akeit    | Akeit     | Woodlot  | 2                      | 1          | 2      | 2       |
| 1.1.3    | Identification and regular (annually) eradication of floating islands / invasive alien plants   | Ngora           | Kapir      | Omittio  | Kakor     | Identification and eradication of floating islands on Lake Bisina  | 3                      | 2          | 2      | 3       |
| 1.1.4    | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | Ngora           | N/A        | N/A      | Aguile    | N/A  | N/A                    | N/A        | N/A    | N/A     |
| 1.1.5    | River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation  | Ngora           | Kobwin     | Kodike   | River Agu | Protection of vegetation (tree planting, fodder grass and crops) 15 km of River Agu and 10 km of River Kodike                      | 2                      | 2          | 2      | 2       |
| 1.1.8    | Ecological water requirements: Revisiting legislation and catchment assessment  | Ngora           | N/A        | N/A      | N/A       | N/A  | N/A                    | N/A        | N/A    | N/A     |
| 1.1.8.1  | Introduce improved farming practices  | Ngora           | Ngora      | Tididiek | Tididiek  | Improve farming practices (using grass bands, tree planting, cultivating across slopes, using covercrops and soil improving crops) | 10 farmers per village | 2          | 2      | 2       |

## INTERVENTION SITES FOR THE OPTIONS

|          |   | District: SERERE |            |          |          |  |                                    |            |        |         |
|----------|---|------------------|------------|----------|----------|--|------------------------------------|------------|--------|---------|
| Ref. No. | Options   | District         | Sub-county | Parish   | Village  | Type of structure  | No.of structures                   | Sub-county | Parish | Village |
| 1.1.1    | The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja catchment and Kyoga WMZ   | Serere           | N / A      | N / A    | N / A    | N / A  | N / A                              | N / A      | N / A  | N / A   |
| 1.1.2    | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | Serere           | Kyere      | Kamurojo | Abuket   | Capacity building, seedlings for 2 nursery beds per village, sensitization on landuse management             | 14 nurseries                       | 3          | 4      | 7       |
| 1.1.3    | Identification and regular (annually) eradication of floating islands /invasive alien plants  | Serere           | Kyere      | Kamurojo | Abuket   | 1 boat, 1 tractor, equipment   | Twice a year eradication of plants | 1          | 1      | 1       |
| 1.1.4    | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | Serere           | N / A      | N / A    | N / A    | N / A  | N / A                              | N / A      | N / A  | N / A   |
| 1.1.5    | River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation  | Serere           | Kyere      | Kamurojo | Abuket   | Riparian vegetation, gabions   | 5 km each in each village          | 1          | 1      | 2       |
| 1.1.8    | Ecological water requirements: Revisiting legislation and catchment assessment  | Serere           | N / A      | N / A    | N / A    | N / A  | N / A                              | N / A      | N / A  | N / A   |
| 1.1.8.1  | Introduce improved farming practices  | Serere           | Kyere      | Kamurojo | Abuket   | Agroforestry, animal husbandry, organic manure, soil management, zero grazing                                | 3 farmers per village              | 2          | 3      | 3       |
| 1.1.9    | Build the capacity on conservation methods, especially for wetlands   | Serere           | Pingire    | Agonyo   | Agonyo 1 | Form and train 2 wetland users associations, training on suitable use of wetlands for 10 farmers per village | 20 farmers                         | 1          | 1      | 2       |

| Ref. No. | Options  | District | Sub-county | Parish    | Village                 | Type of structure   | No.of structures                                      | Sub-county  | Parish | Village |
|----------|--|----------|------------|-----------|-------------------------|---|---|-------------|--------|---------|
| 1.1.10   | Monitoring the impacts of sustainable land and environmental management in terms of improved farming practices (individual benefits) and downstream water management   | Serere   | N/A        | N/A       | N/A                     | N/A   | N/A   | N/A         | N/A    | N/A     |
| 1.2.1    | Provide routine training (forestry handbook) to CMCs, forest management, land care and agricultural managers: 1 training in each district @ 2 yrs  | Serere   | N/A        | N/A       | N/A                     | N/A   | N/A   | N/A         | N/A    | N/A     |
| 1.2.2    | Establish nurseries for provision of seedling and establish distribution, training and management systems in all districts - pilot projects  | Serere   | Kyere      | Kyere HQ  | Kyere HQ                | Establish 3 nurseries   | 3 nurseries   | 3           | 3      | 3       |
| 1.2.3    | Support the implementation of a reforestation programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land management | Serere   | Kyere      | Akuja     | Akuja                   | Sensitisation, woodlots and agro-forestry, establishment of 2 nurseries per village | 12 nurseries (6 for woodlots and 6 for agro-forestry) | 3           | 5      | 6       |
| 1.2.4    | Planting trees in degraded areas   | Serere   | Kateta     | Kateta HQ | Kateta HQ               | Kateta Olupe  | 1 tree nursery per village                            | 6 nurseries | 3      | 5       |
| 1.3.1    | Regular updating of district wetland inventories by districts  | Serere   | Kyere      | Kamurgojo | Abuket (Abuket wetland) | Provide a GPS per village and relevant software, update wetland inventory regularly | 8 GPSs  | 3           | 8      | 8       |

|        |  |                               |                        |  |   |  |     |     |     |
|--------|--|-------------------------------|------------------------|--|---|--|-----|-----|-----|
|        |  | Ojetenyang                    | Owiny (Owiny wet-land) |  |   |  |     |     |     |
|        | Kanyangan  | Awoja (Owiny wet-land)        |                        |  |   |  |     |     |     |
| Atiira | Opure  | Opure (Akwang Kituke wetland) |                        |  |   |  |     |     |     |
|        | Osilang  | Opin (Opin wet-land)          |                        |  |   |  |     |     |     |
| 1.3.2  | Updating of demarcated protection zones and acceptable utilization of wetlands, producing GIS maps of wetlands at various levels | Serere                        | Kyere                  | Kamurojo<br>Kelim<br>Kangodo             | Abuket (Abuket wetland)<br>Omagoro (Omagoro wetland)<br>Ojama (Aminit wet-land) | Demarcations, production of GIS maps, software | 3   | 8   | 8   |
|        |  | Kateta                        | Kamusala               | Kamusala<br>Ojetenyang<br>Kanyangan      | Kamusala (Kamusala wetland)<br>Owiny (Owiny wet-land)<br>Awoja (Owiny wet-land) |  |     |     |     |

| 1.3.3  | Study for economic valuation of wetland resources and disseminate the results  | Serere                        | N/A                    | N/A                                      | N/A   | N/A  | N/A | N/A | N/A |

| Ref. No. | Options  | District | Sub-county | Parish   | Village   | Type of structure   | No. of structures | Sub-county | Parish | Village |
|----------|--|----------|------------|--|---|---|-------------------|------------|--------|---------|
| 1.3.4    | Review and update the wetland management / action plans                          | Serere   | Kyere      | Kamurojo<br>Kelim<br>Kangodo                     | Abuket (Abuket wetland)<br>Omagoro (Omagoro wetland)<br>Ojama (Aminit wetland)  | Wetlands management plan is in process of being developed, update regularly |                   | 3          | 8      | 8       |
| 1.3.5    | Restoration of vital (unique) critical (subject to ongoing degradation) wetlands | Serere   | Kyere      | Kamurojo<br>Kelim<br>Kangodo<br>Kateta<br>Atiira | Abuket (Abuket wetland)<br>Owiny (Owiny wetland)<br>Awoja (Owiny wetland)<br>Opure (Akwang Kituke wetland)<br>Opin (Opin wetland) | Restoration of wetlands   | 8 wetlands        | 3          | 8      | 8       |

|              |  |        |        |                  |  |  |  |     |     |     |
|--------------|--|--------|--------|------------------|--|--|--|-----|-----|-----|
| <b>1.4.1</b> | Mapping, demarcation of riparian and roadside protection zones and identify and implement source protection measures   | Serere | Kyere  | Kamurojo         | Abuket   | Mapping, demarcation pillars, riparian vegetation, gabions | 5 km each in each village  | 1   | 1   | 2   |
| <b>2.1.1</b> | Improve sanitation technology and building material support and implement them   | Serere | Kyere  | Kamurojo         | Abuket TC  | Construct 3 lined pit latrines and handwashing facilities  | Abuket P/S and Ojama P/S (each 2 x 5stance toilets) and market (2 x 3stance toilets) | 1   | 1   | 2   |
| <b>2.1.2</b> | Improve faecal sludge management (collection, transportation, treatment and re-use) through clustering of small towns (Kumi Sironko, Kapchorwa, Nakapiripirit) | Serere | N/A    | N/A              | N/A  | N/A  | N/A  | N/A | N/A | N/A |
| <b>2.2.2</b> | Refurbish valley dams and tanks  | Serere | Kyere  | Kangodo          | Aminit   | Ojama dam  | 1  | 1   | 1   | 1   |
| <b>2.3.1</b> | Design and construct river Agu scheme to supply Kumi and surroundings - water and wastewater works   | Serere | N/A    | N/A              | N/A  | N/A  | N/A  | N/A | N/A | N/A |
|              | Design and construct River Agu / Abuket Scheme to supply Kyere, Ocapa and surrounds - water and waste water works  | Serere | Kyere  | Abuket           | 2 pipelines  | 2  | 2  | 2   | 2   | 2   |
| <b>2.3.2</b> | Soroti treatment and distribution - expand in stages (NWSC)  | Serere | N/A    | N/A              | N/A  | N/A  | N/A  | N/A | N/A | N/A |
| <b>2.6.1</b> | Feasibility studies and design of prioritised sand dams. Construction, with cooperation and input from local communities                                       | Serere | N/A    | N/A              | N/A  | N/A  | N/A  | N/A | N/A | N/A |
| <b>2.7.1</b> | Needs identification for location and type of dams and associated abstraction facilities   | Serere | Kyere  | Kangodo          | Ojama  | Valley dam   | 1  | 1   | 1   | 1   |
| <b>2.7.2</b> | Feasibility & design of prioritized dams for stock watering and humans needs. Construction, with cooperation and input from local communities                  | Serere | Kateta | Kateta           | Dams   | 2 dams   | 1  | 2   | 2   | 2   |
| <b>2.8.2</b> | Enhancement of rain fed agriculture  | Atiira | Opure  | Abili            | Rain water harvesting structures, cover crops, treadle pumps, mulching for 2 farmers per village | 10 farmers   | 2  | 4   | 5   |     |
|              |  |        | Okodo  | Okodo            |  |  |  |     |     |     |
|              |  |        | Orupe  | Akism            |  |  |  |     |     |     |
|              |  |        | Kyere  | Obuniekori       |  |  |  |     |     |     |
|              |  |        | Kyere  | Kamurojo Central |  |  |  |     |     |     |
|              |  |        | Kyere  | Obwakol          |  |  |  |     |     |     |

| Ref. No. | Options  | District | Sub-county | Parish     | Village                     | Type of structure  | No.of structures | Sub-county | Parish | Village |
|----------|--|----------|------------|------------|-----------------------------|--|------------------|------------|--------|---------|
| 2.8.3    | New irrigation schemes: Undertake feasibility studies of identified areas  | Serere   | Katete     | Ojetenyang | Owiny                       | Irrigation scheme  | 1                | 1          | 1      | 1       |
| 2.8.4    | Construction of new irrigation schemes: Improved (seasonal) Wetlands Schemes   | Serere   | Katete     | Ojetenyang | Owiny                       | Irrigation scheme  | 1                | 1          | 1      | 1       |
| 2.8.5    | Construction of new irrigation schemes: Low - power pumped schemes that utilize water from nearby rivers, swamps and lakes               | Serere   | Kyere      | Abuket     | Abuket                      | Irrigation scheme  | 1                | 1          | 1      | 1       |
| 2.8.6    | Construction of new irrigation schemes: Simple gravity - fed schemes   | Serere   | N/A        | N/A        | N/A                         | N/A  | N/A              | N/A        | N/A    | N/A     |
| 2.8.7    | Construction of new irrigation schemes: Type A Formal Irrigation   | Serere   | Labori     | Labori     | Labori                      | Irrigation scheme  | 1                | 1          | 1      | 1       |
| 2.8.8    | Construction of new irrigation schemes: Type B Formal Irrigation   | Serere   | N/A        | N/A        | N/A                         | N/A  | N/A              | N/A        | N/A    | N/A     |
| 2.9.1    | Water efficiency evaluation and recommendations  | Serere   | N/A        | N/A        | N/A                         | N/A  | N/A              | N/A        | N/A    | N/A     |
| 2.10.1   | Investment and implementation in hydropower installations and grid distribution  | Serere   | N/A        | N/A        | N/A                         | N/A  | N/A              | N/A        | N/A    | N/A     |
| 2.11.1   | Promote additional and alternative sources of energy including low cost solar panels to be used for LED lighting, radios and cell phones | Serere   | Kyere      | Kamurojo   | Abuket TC (Abuket P / S)    | 1 solar panel per school   | 3                | 3          | 3      | 3       |
|          |  |          | Atiira     | Atiira     | Odokai (Odokai P / S)       |  |                  |            |        |         |
|          |  |          | Kateta     | Kamusala   | Kamusala (Kamusala (P / S)) |  |                  |            |        |         |
| 2.11.2   | Promote use of energy efficient woodstoves by making the technology readily available  | Serere   | Kyere      | Kamurojo   | Abuket TC (Abuket P / S)    | Training in use of energy saving stoves for 10 people per school and 10 people per village | 60 people        | 3          | 3      | 3       |
|          |  |          | Atiira     | Atiira     | Odokai (Odokai P / S)       |  |                  |            |        |         |
|          |  |          | Kateta     | Kamusala   | Kamusala (Kamusala (P / S)) |  |                  |            |        |         |
| 2.12.1   | Develop a manual on aquaculture techniques (building on available material)  | Serere   | N/A        | N/A        | N/A                         | N/A  | N/A              | N/A        | N/A    | N/A     |

### ANNEX 3 – Detailed Implementation Plan

| Ref. No.                                     | Options   | Districts concerned  | Type and No. of structure  | Indicator  | Responsibility                 | Period of Intervention |         |         |         | Costs in US\$ |
|--|---|--|--|--|--------------------------------|------------------------|---------|---------|---------|---------------|
|  |   |  |  |  |                                | 2015 / 2016            | 2017    | 2018    | 2019    |               |
| <b>Catchment Protection and Conservation</b> |   |  |  |  |                                |                        |         |         |         |               |
| <b>1.1.8.1</b>                               | Introduce improved farming practices  | Bukwo, Kween, Bulambuli, Kap-chonwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Construct 40 cylos, 60 underground water tanks, 2 irrigation layouts, provide 80 ox-ploughs, 2 tractors, 50 fresian cattle, 26 treadle pumps, tree seedlings, seeds, woodlots: 10 ha, agroforestry: 53 ha, contour bunds: 400 km, trenches: 50 km, cattle tracks: 5, grass planting, train and equip 1.227 farmers | The income of farmers has increased by 20%   | Kyoga WMZ, CMC, DNRO, DEO, DAO | 804,307                | 402,154 | 402,154 | 402,154 | 1,608,614     |
| <b>1.1.3</b>                                 | Identification and regular (annually) eradication of floating islands / invasive alien plants | Soroti, Serere, Ngora, Kumi, Katakwi   | 3 tractors, 9 motor boats, 18 wheelbarrows, hoes and other harvesting equipment, construction of 6 barriers before Awoja bridge, eradication of plants twice yearly on Awoja River and Lake Bisina   | The area invaded by invasive plants has been reduced to 0  | Kyoga WMZ, CMC, DNRO, DEO      | 320,264                | 256,211 | 64,053  | 64,053  | 640,529       |
| <b>1.1.8</b>                                 | Ecological water requirements: Revisiting legislation and catchment assessment                | Bulambuli, Kap-chonwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora               | Ecological water requirements: legislation and catchment assessment  | Legislation providing for ecological water requirements is in place. Requirements assessed for 8 streams | Kyoga WMZ, CMC, Consultant     |                        | 117,857 |         |         | 117,857       |

|       |   |  |   |  |  |           |           |           |
|-------|---|--|---|--|--|-----------|-----------|-----------|
| 1.1.1 | The preparation and dissemination of comprehensive and sustainable land and environmental management manual providing the technological approaches tailored for the Awoja catchment and Kyoga WMZ   | Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora               | Develop a comprehensive and sustainable land and environmental management manual and disseminate it   | All districts are in the possession of a comprehensive and sustainable land and environmental management manual  | Kyoga WMZ, CMC, Consultant               | 98,571    | 98,571    | 98,571    |
| 1.1.2 | Design and pilot of individual farms according to sustainable land and environmental management principles. Layout to include contouring, drain and waterway layout and improvements, road design, runoff management, woodlot and agroforestry planning | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Establish 8 runoff management structures, 14 ha of agroforestry, 344 ha of woodlots / agroforestry, 190 km of contour bunds, 128 km of road design, 3 bridges, 7 small - drip irrigations, 14 nurseries, carry out 14 sensitisations  | Each farm is equipped with x conservation structures.<br>Baseline: 0. The productivity of each farm has increased by 20 %  | Kyoga WMZ, CMC, DNRO, DEO, DAO           | 1,478,867 | 1,478,867 | 4,929,555 |
| 1.1.4 | Development of a fire risk, fire control and fire protection plan, with controlled burning where required for grazing and biodiversity management and implement it  | Amudat, Napak, Nakapiripirit, Bukwo, Katakwi, Kween  | 6 x fire fighting equipment, training of fire fighters (24), training of fire fighting committees (58), development of 6 fire management plans, quarterly public awareness raising (113 communities), 41 community trainings, establish fire lines of 40 km, ordinance and by-laws <sup>1</sup> | management plans in each district, number of sensitised communities, number of committees and members trained, number of ha of uncontrolled burning is reduced by 60 % | Kyoga WMZ, CMC, DNRO, DEO, DAO, DFO, CDO | 658,343   | 493,757   | 1,645,857 |

| Ref. No.      | Options  | Districts concerned  | Type and No. of structure  | Indicator   | Responsibility                      | Period of Intervention |           |           |           | Costs in US\$ |
|---------------|--|--|--|---|-------------------------------------|------------------------|-----------|-----------|-----------|---------------|
|               |  |  |  |   |                                     | 2015 / 2016            | 2017      | 2018      | 2019      |               |
| 1.1.5         | River bank protection and stabilisation - gabions, management of cattle access points, protection of riparian vegetation   | Bulambuli, Sironko, Amudat, Napak, Kapchorwa, Nakapiripirit, Soroti, Serere, Ngora, Bukwo, Katakwi, Bukeeda, Kween | rivers: 230 km, re-course of river: 10km, river pegging: 260 km, weirs: 15, bridges: 15, stone pitching of cattle access points: 7 km <sup>2</sup> , cattle access points: 218, woodlots: 15 ha, riparian vegetation (trees, grass); 323 km, seedlings: 50.000+, de-slitting | Number of ha of areas demarcated and restored, number of cattle access points | Kyoga WMZ, CMC, DNRO, DEO, DFO      | 4,119,189              | 4,119,189 | 2,353,822 | 1,176,911 | 11,769,110    |
| 1.1.9         | Build the capacity on conservation methods, especially for wetlands  | Bulambuli, Amudat, Napak, Kapchorwa, Nakapiripirit, Soroti, Serere, Ngora, Kumi, Katakwi, Bukeeda, Kween           | Form and train 56 environmental committees, form and train 15 wetland user committees, train community members in 10 villages, carry out sensitisations in 68 villages, develop training manuals (160 copies)  | Number and type of activities carried out by the trained committees           | Kyoga WMZ, CMC, DNRO, DEO           | 328,143                | 328,143   |           | 164,071   | 820,357       |
| 1.1.10        | Monitoring the impacts of unsustainable land and environmental management in terms of improved farming practices (individual benefits) and downstream water management | Bulambuli, Kapchorwa, Sironko, Bukeeda, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora         | Develop monitoring programmes for all 14 districts   | Monitoring programme implemented  | Kyoga WMZ, CMC, DNRO, DEO, DAO, DCO |                        |           | 66,786    | 66,786    | 133,571       |
| Reforestation |  |  |  |   |                                     |                        |           |           |           |               |

|       |  |  |   |  |                                     |         |         |           |
|-------|--|--|---|--|-------------------------------------|---------|---------|-----------|
|       |  |  |   |  |                                     |         |         |           |
| 1.2.2 | Establish nurseries for provision of seedling and establish distribution, training and management systems in all districts - pilot projects  | Bulambuli,Kap-chowa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripint, Amudat, Kumi, Ngora               | 36 nurseries, 9 tree nurseries, 1 greenhouse, 1 training of farmers, 5 trainings for nursery managers2  | Existence of x newly established nurseries, number of seedlings produced, number of seedlings sold Baseline: 0                                     | Kyoga WMZ, CMC, DNRO, DEO, DAO      | 87,620  | 87,620  | 175,240   |
| 1.2.3 | Support the implementation of a reforestation programme aimed at restoring lost woodland and at establishing woodlots to reduce the pressure on natural forest. Link to agroforestry and sustainable land management | Bukwo, Kween, Bulambuli,Kap-chowa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripint, Amudat, Kumi, Ngora | Agroforestry for 157 ha plus trees for 12 km boundary, woodlots for 239 ha, seedlings 650.000 plus for 20 ha, 18 tree nurseries, 12 nurseries, 18 sensitizations, training of 40 farmers, training of 10 management committee, development of a reforestation programme | Number of ha under agroforestry, number of ha of newly planted woodlots, number of seedlings produced and sold in x nurseries Baseline: 0          | Kyoga WMZ, CMC, DNRO, DEO, DFO, CDO | 886,886 | 886,886 | 2,217,215 |
| 1.2.4 | Planting of trees in degraded areas  | Bukwo, Kween, Bukambuli,Kap-chowa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Amudat, Kumi, Ngora               | Planting trees: 1.155 ha, seedlings: 630.500, tree nurseries: 6   | Number of ha with newly planted trees that survived, number of seedlings planted, number of seedlings produced and sold in x nurseries Baseline: 0 | Kyoga WMZ, CMC, DNRO, DEO, DFO, CDO | 81,995  | 49,197  | 16,399    |
| 1.3.1 | Regular updating of district wetland inventories by districts  | Kween, Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripint, Amudat, Kumi, Ngora       | Develop 8 wetland inventories, update 13 wetland inventories regularly, GIS equipment   | Availability of wetland inventories in each district, yearly update of wetland inventories   | Kyoga WMZ, CMC, DNRO, DEO           | 83,482  | 33,393  | 16,696    |
|       |  |  |   |  |                                     |         |         |           |

| Ref. No.                             | Options  | Districts concerned  | Type and No. of structure  | Indicator  | Responsi- bility                      | Period of Intervention |        |        |        |        | Costs in US\$ |
|--------------------------------------|--|--|--|--|---------------------------------------|------------------------|--------|--------|--------|--------|---------------|
|                                      |  |  |  |  |                                       | 2015 / 2016            | 2017   | 2018   | 2019   | 2020   |               |
| <b>Lakes and Wetlands Management</b> |  |  |  |  |                                       |                        |        |        |        |        |               |
| 1.3.1                                | Regular updating of district wetland inventories by districts  | Kween, Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora        | Develop 8 wetland inventories, update 13 wetland inventories regularly, GIS equipment  | Availability of wetland inventories in each district, yearly update of wetland inventories | Kyoga WMZ, CMC, DNRO, DEO             | 83,482                 | 33,393 | 16,696 | 16,696 | 16,696 | 166,964       |
| 1.3.3                                | Study for economic valuation of wetland resources and disseminate the results  | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora | Economic valuation of wetland resources and its dissemination  | Each district is in the possession of the study reports                                    | Kyoga WMZ, CMC, DNRO, DEO, consultant | 62,857                 |        |        |        |        | 62,857        |
| 1.3.2                                | Updating of demarcated protection zones and acceptable utilization of wetlands, producing GIS maps of wetlands at various levels | Kween, Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora        | Demarcation of 134 protection zones, update of 49 protection zones, produce GIS maps for all wetlands, establish 1 protection zone with suitable vegetation, GPS and GIS equipment | Availability of GIS maps for x wetlands, number and ha of demarcated protection zones      | Kyoga WMZ, CMC, DNRO, DEO             | 1,402,281              |        |        |        |        | 1,402,281     |
| 1.3.4                                | Develop or review and update the wetland management / action plans   | Kween, Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngora        | Develop 94 wetland management action plans, review and update 126 wetland management action plans  | Availability of wetland management action plans (new and updated) in all districts         | Kyoga WMZ, CMC, DNRO, DEO             | 94,286                 |        |        |        |        | 157,143       |

|       |  |   |   |  |                                |           |           |           |
|-------|--|---|---|--|--------------------------------|-----------|-----------|-----------|
|       |  |   |   |  |                                |           |           |           |
| 1.3.5 | Restoration of vital (unique) critical (subject to on - going degradation) wetlands                                  | Kween, Bulambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripit, Amudat, Kumi, Ngora        | Desilt 3 rivers, restoration / tree planting in 63 wetlands, develop woodlots of 5 ha, fence 1 acre with live hedges, peg off 12 open access areas for animals, restore the fish population in 16 areas, awareness creation in 40 villages, train 2 wetland management committees, law enforcement and by - laws  | Number of ha of wetlands restored, number of open access areas for animals, activities undertaken by x wetlands management committees                              | Kyoga WMZ, CMC, DNRO, DEO      | 064       | 276,064   | 920,212   |
| 1.4.1 | Mapping, demarcation of riparian and roadside protection zones and identify and implement source protection measures | Bukwo, Kween, Bukambuli, Kapchorwa, Sironko, Bukeda, Soroti, Serere, Katakwi, Napak, Nakapiripit, Amudat, Kumi, Ngora | Desilt 15 rivers, establish a riparian buffer zone of 200 ha, 30 m buffer zone along River Sironko and its tributaries, demarcation zones along Rivers Siit, Nyalit, Chepkwir, Kapteret, River Sipi and its tributaries, protection zones along 16 rivers, demarcation pillars in 6 areas, 15 km river pegging of River Sironko, tree planting on 114 ha, 36 ha, woodlots: 15 ha, seedlings: 50,000, roadside tree planting for 453 km, 16 cattle rams, construction of 15 bridges, gabions, mapping of rivers and road sides, 15 sensitisations, GPS, GIS. | Number of km and size of riparian and roadside protection zones established, number of ha restored, availability of maps of riparian and roadside protection zones | Kyoga WMZ, CMC, DNRO, DEO, CDO | 1,717,478 | 1,717,478 | 3,434,956 |

| Ref. No.                                     | Options   | Districts concerned   | Type and No. of structure  | Indicator  | Responsi-bility                | Period of Intervention |         |         |         | Costs in US\$ |

### Explanations:

|       |  |  |   |
|-------|--|--|---|
| 2.3.1 | Design and construct river Agu scheme to supply Kumi and surroundings - water and wastewater works | Construction plans are under way                               | no action stated  |
| 2.8.8 | Construction of new irrigation schemes:<br>Type B Formal Irrigation                                |  | no action stated  |
| 2.7.1 | Needs identification for location and type of dams and associated abstraction facilities           | Bulambuli, Napak, Nakapiripirit, Soroti, Seere, Ngora, Bukedea | 4 valley dams, 17 dams, 4 abstraction facilities for livestock watering and 4 for irrigation with treadle pumps<br>2.7.1 has been incorporated into 2.7.2 |

|              |   |  |   |             |
|--------------|---|--|---|-------------|
| <b>4.5.2</b> | Develop by - laws and ordinances on water and environmental management and protection | Bukwo, Kween, Bulambuli, Kapchorwa, Sironko, Bukedea, Soroti, Serere, Katakwi, Napak, Nakapiripirit, Amudat, Kumi, Ngara | Develop by - laws and ordinances on water and environmental management and protection | Newly added |
|--------------|---|--|---|-------------|

1 Fire equipment and fire fighting plans have been increased to 6 as they concern all districts, Napak communities assumed to be 100. 2 The trainings for nursery managers has been increased to 36 as it should be done for all nurseries.

2 The number of committees has been increased as all sand dams should have a committee.

3 The number of trainings has been increased as all fish ponds have to be accompanied by a training..

It is assumed that a committee consists of 10 members.

## ANNEX 4 – Detailed Investment Plan
